Piezoelectronic Products

PS Series

Piezoelectronic Buzzers(without circuit)
Pin Terminal/Lead

FEATURES

- The PS series are high-performance buzzers that employ unimorph piezoelectric elements and are designed for easy incorporation into various circuits.
- They feature extremely low power consumption in comparison to electromagnetic units.
- Because these buzzers are designed for external excitation, the same part can serve as both a musical tone oscillator and a buzzer.
- They can be used with automated inserters. Moisture-resistant models are also available.
- The lead wire type(PS1550L40N) with both-sided adhesive tape installed easily is prepared.

APPLICATIONS

Electric ranges, washing machines, computer terminals, various devices that require speech synthesis output.

Type	Part No.	Applications	Features
PS12 Type	PS1240P02AT	For warning and alarm sounds of home appliances(air conditioners, refrigerators, fan forced heaters, cordless telephones, etc.)	• Compact • Automatic mountable • 12.7mm pitch radial taping
	PS1240P02CT		• Thin type • Automatic mountable • 12.7mm pitch radial taping
PS14 Type	PS1440P02BT		• High sound pressure • Automatic mountable • 15mm pitch radial taping
	PS1420P02AT		• Low frequency tone • Automatic mountable • 15mm pitch radial taping
PS17 Type	PS1740P02		• High sound pressure • Packing in bulk
	PS1740P02C1		• Thin type • Packing in bulk
	PS1720P02		• Low frequency tone • High sound pressure
PS19 Type	PS1927P02	For potted circuit (washing machines, drying machines, hot water supply systems, etc.)	• High sound pressure • Water-proof processing element
	PS1920P02		• Low frequency tone • Water-proof processing element

PRECAUTIONS FOR USE

- Do not apply DC bias to the piezoelectric buzzer; otherwise insulation resistance may become low and affect the performance.
- Do not supply any voltage higher than applicable to the piezoelectric buzzer.
- Use a regulated DC power supply voltage with low ripples.
- A square-wave drive voltage may cause harmonics depending on the frequency. In this case, insert a capacitor in parallel.
- Allow approximately 5 to 7 milliseconds for rise time and fall time. Pulse duration should therefore be 50 milliseconds or longer.
- Do not use the piezoelectric buzzer outdoors. It is designed for indoor use. If the piezoelectric buzzer has to be used outdoors, provide it with waterproofing measures; it will not operate normally if subjected to moisture.
- Do not wash the piezoelectric buzzer with solvent or allow gas to enter it while washing; any solvent that enters it may stay inside a long time and damage it.
- A piezoelectric ceramic material of approximately 100µm thick is used in the sound generator of the buzzer. Do not press the sound generator through the sound release hole otherwise the ceramic material may break. Do not stack the piezoelectric buzzers without packing.
- Do not apply any mechanical force to the piezoelectric buzzer; otherwise the case may deform and result in improper operation.
- Do not place any shielding material or the like just in front of the sound release hole of the buzzer; otherwise the sound pressure may vary and result in unstable buzzer operation. Make sure that the buzzer is not affected by a standing wave or the like.
- Be sure to solder the buzzer terminal at 270°C (Soldering iron tip) within 3 seconds using a solder containg silver. Electrode removal may occur if soldering temperature is too high.
- Avoid using the piezoelectric buzzer for a long time where any corrosive gas (H_2S, etc.) exists; otherwise the parts or sound generator may corroded and result in improper operation.
- Be careful not to drop the piezoelectric buzzer.
