Battery performance and cycle life are strongly affected by how they are used. In order to maximize battery safety, please consult Panasonic when determining charge / discharge specs, warning label contents and unit design.

## Typical Charge Characteristics

## Typical Discharge Characteristics

Note: [It] was previously expressed as [C]. [It] is an IEC standard expression for the amount of charge or discharge current and is expressed as: $\mathrm{It}(\mathrm{A})=\mathrm{Cn}(\mathrm{Ah}) / 1 \mathrm{~h}$.

- $[t]$ is the reference test current in ampres
- [ Cn ] is the rated capacity of the cell or battery in Ampere-hours. $\mathrm{n}=$ the time base [hours] for which the rated capacity is declared
