PANDUIT® PAN-STEEL® System FOR HARSH ENVIRONMENTS

PAN-STEEL® System for Harsh Environments

**PANDUIT® PAN-STEEL®
Stainless Steel Ties are engineered
to outlast the toughest corrosive
and environmental extremes.**

Now a revolutionary new locking head design makes them the highest rated loop tensile strength, tightest clamping, easiest threading ball locking ties in the world.

The increased performance of the PAN-STEEL® System provides an extra margin of safety and lower installed cost.

- Withstands harsh environments
- Unique locking ramp
- Self-locking with low thread force
- Fully rounded edges
- Type 304 and 316 stainless steel
- State-of-the-art tooling

Nylon 11 Coated Ties

WAVE-TY™ Stainless Steel Ties

General Purpose Ties

**PANDUIT® is a Global Leader
Providing Innovative Wire
Management Solutions.**

- **Stainless Steel Systems**
- **Cable Ties and Accessories**
- **Raceway Systems**
- **Routing Systems**
- **Identification Systems**
- **Power and Grounding Systems**
- **Terminals**
- **Safety and Facility Solutions**

PAN-STEEL® System

The *PAN-STEEL*® System provides a strong, durable method of bundling, identifying and fastening, which can be used in virtually all indoor, outdoor and underground (including direct burial) applications, where severe environmental conditions exist. The ties are designed for use in critical applications where strength, vibration, radiation, weathering, corrosion and temperature extremes are a factor.

- High strength
- Long life
- Weather resistant
- Chemical resistant
- Temperature extremes
- Radiation resistant
- Permanent identification

PANDUIT® offers unique products to meet customer needs:

Metal Locking Ties — Excellent performance in any environment

Nylon 11 Selectively Coated Ties — Strength of steel, protection of nylon

WAVE-TY™ Stainless Steel Ties — Maintains a high tension grip on non-resilient objects

Fully Coated Ties — Polyester coated for additional bundle protection

Strapping — Reduces installation time and leaves no sharp edges

Mounts and accessories — Used with *PAN-STEEL*® ties and straps to speed and simplify mounting

Permanent identification products — Custom identification for harsh environments

State-of-the-art tooling — Speed installation and lower installed cost

PANDUIT® PAN-STEEL® Applications

AIRCRAFT

PANDUIT® PAN-STEEL® Stainless Steel Ties (type MLT) are used to fasten thermal insulation blankets to jet engine manifolds and tubes.

PRIMARY BENEFIT

Installation tooling with controlled tension and auto cut-off capability significantly reduces cost of installation. The low weight, high strength of the ties makes them more efficient and reliable than conventional fasteners. The stainless steel ties have been temperature tested to over 1000° F (538°C) to provide excellent continuous service over the entire temperature range and to provide long life.

AIRCRAFT

PANDUIT® PAN-STEEL® Stainless Steel Ties are used to secure insulation envelopes to ducting in aircraft fuselages.

PRIMARY BENEFIT

The ties have been tested to over 1000° F (538°C) which provides excellent continuous service over the entire operating range. The single wrap, self-locking low weight design provides improved efficiency and reliability.

TRUCK ENGINES

PANDUIT® PAN-STEEL® Stainless Steel Ties are used to fasten thermal insulation blankets to truck engine exhaust pipes.

PRIMARY BENEFIT

The ties provide high strength, low profile and low weight design, which are more efficient than conventional fasteners. The ties are temperature tested to over 1000° F (538°C) for performance under continuous high temperature conditions.

AUTOMOTIVE

PANDUIT® PAN-STEEL® Stainless Steel Ties are used to fasten constant velocity (CV) boots on front wheel drive automobiles.

PRIMARY BENEFIT

The ties can be installed without disassembling the constant velocity (CV) joint which saves installation time and lowers installed costs. The stainless steel ties provide excellent weather resistance and corrosion resistance for long life with high strength and low weight.

AUTOMOTIVE

PANDUIT® PAN-STEEL® WAVE-TY™ Stainless Steel Ties and the PPTMT Pneumatic Installation Tool are used to fasten heat shields on automotive exhaust assemblies.

PRIMARY BENEFIT

Pneumatic installation tooling with controlled tension and automatic cut-off capability speeds installation time and lowers installed costs. WAVE-TY™ Stainless Steel Ties retain tension on a solid bundle where other stainless steel ties will not function.

PANDUIT® PAN-STEEL® Applications (continued)

TELECOMMUNICATIONS

PANDUIT® PAN-STEEL® Stainless Steel Ties are used to securely fasten cables to telecommunication towers.

PRIMARY BENEFIT

The ties provide long life, corrosion and chemical resistance in outdoor harsh environments and temperature extremes. The self-locking design provides fast and easy installation. State-of-the-art tooling further reduces installation time.

MLT Ties

MAINTENANCE AND REPAIR (MRO)

PANDUIT® PAN-STEEL® Stainless Steel Ties are used to fasten pipe markers in pulp and paper mills, refineries, power plants and breweries.

PRIMARY BENEFIT

The ties provide extended service life, which reduces the need for periodic rework. The single wrap self-locking design provides fast and easy installation. The ties provide excellent chemical resistance in harsh environments and in high temperature extremes.

MS
Strapping

MAINTENANCE AND REPAIR (MRO)

PANDUIT® Custom Marked Marker Plates attached with PAN-STEEL® Stainless Steel Ties are used to identify conduit and circuits in petrochemical plants, pulp and paper mills, refineries, and breweries.

PRIMARY BENEFIT

The products are marked to meet customer specifications with one of two computer controlled systems (laser or embosser), which provides permanent identification to resist corrosion, abrasion, and radiation in harsh environments.

Marking
and
ID

PETROCHEMICAL PROCESSING

PANDUIT® PAN-STEEL® Stainless Steel Ties, Strapping and Marker Plates are used in chemical plants to bundle cables to cable trays and to identify conduit and cables.

PRIMARY BENEFIT

The ties provide long life, corrosion resistance and high temperature extremes and allow the ties to be used in many different applications.

Accessories

NUCLEAR PLANTS

PANDUIT® PAN-STEEL® Stainless Steel Ties are used to secure heat trace cable and replace wing seal strapping methods. A complete selection of state-of-the-art tooling makes installation quicker and easier and reduces the amount of exposure time for plant maintenance personnel in containment areas.

PRIMARY BENEFIT

The ties have high radiation resistance (2X10⁸ RAD) for excellent use in containment areas.

PANDUIT® PAN-STEEL® Applications (continued)

MLT Ties

TRAFFIC SIGNALS

PANDUIT® PAN-STEEL® Stainless Steel Ties are used for bundling and fastening cables to messenger strand in traffic signal applications.

PRIMARY BENEFIT

The ties provide a 40 year service life, which reduces the need for periodic rework. The smooth fully radiused sides are safe to use and will not injure installer's hands or abrade cable insulation.

MS Strapping

AERIAL SUPPORT

PANDUIT® PAN-STEEL® Stainless Steel Ties are used to fasten cable and/or splice closures to the messenger strand in aerial support applications.

PRIMARY BENEFIT

The ties provide a 40 year service life, which reduces the need for periodic rework. The ties are unaffected by sun, acid rain, or most chemicals, which allows them to be used in many different environments.

Marking and ID

OFFSHORE OIL

PANDUIT® PAN-STEEL® 316 Grade Stainless Steel Cable Ties, Straps, and Nylon 11 Selectively Coated Ties are used to fasten cables and hoses on offshore platforms.

PRIMARY BENEFIT

The ties provide superior corrosion protection in salt spray environments, which extends service life and reduces need for periodic rework.

Accessories

SHIPBUILDING

PANDUIT® PAN-STEEL® Stainless Steel Cable Ties are used to fasten cables to cable trays and cable hangers in shipbuilding applications.

PRIMARY BENEFIT

The ties provide extended service life, which reduces the need for periodic rework; are non-flammable so no toxic or harmful gases are released in case of fire; and have fully rounded sides, which are safe to use and will not injure installer's hands or abrade cable insulation.

Technical Info

RAILROAD

PANDUIT® PAN-STEEL® Stainless Steel Ties are used to bundle, fasten, and secure cables and hoses on trains, especially in exposed areas underneath engines and cars that are subjected to harsh environmental conditions. The ties have passed Japanese Industry Standard for salt spray (JIS-C-5028) and vibration (JIS-C-4031).

PRIMARY BENEFIT

The ties provide high strength with low weight and low profile for improved efficiency and reliability. The extended service life reduces the need for periodic rework.

PAN-STEEL® Self-Locking Stainless Steel Cable Ties (MLT Series)

PANDUIT® is a leading producer of stainless steel ties for harsh environments. New designs are continually introduced to meet the application challenges encountered by our customers, while providing the lowest installed cost.

- Self-locking
- Fully rounded edges
- Low thread force
- 100% Stainless Steel construction
- Patented displacement lock
- Unique locking ramp
- Patented lead-in design
- Extended retaining tab
- Patented aggressive locking head
- Patent pending strengthening ribs
- Complete line of installation tools

PANDUIT® offers unique products to meet customer needs:

General Purpose Ties — Excellent performance in any environment

WAVE-TY™ Stainless Steel Ties — Unique wave form spring maintains a high tension grip on non-resilient objects

Patented Nylon 11 Selectively Coated Ties — Strength of steel, protection of nylon

Fully Coated Ties — Polyester coated for additional bundle protection

Double Loop Ties — Tighter tensioning and higher loop tensile strength

Complete Line of Installation Tools — Manual and pneumatic installation tools for controlled tension, automatic cut-off and lower installed cost

Cross sectional view of PANDUIT® tie body. (Photo micrograph shown is magnified 150X).

Index

The PAN-STEEL® Stainless Steel Cable Tie is designed for superior comfort and safety when handling due to its fully rounded sides and smooth surfaces. Smooth surfaces and rounded sides assure cable protection and operator safety. PANDUIT® not only removes the burr, but actually passes the material through a secondary process which removes the top and bottom corners of the material.

Self-Locking Head for Fast Installation

1. Place tie around bundle, put tip through head and pull up tight by hand.

2. Use one of the PANDUIT® PAN-STEEL® installation tools to tension and cut off excess tail quickly.

The stainless steel metal locking tie series can be fastened by hand as shown in **Photo 1**. No tools are required. Just place around bundle, pull the tip of the tail through the locking head and pull up tight by hand. The self-locking head secures the tie in place.

Photo 2 shows the metal locking tie series being installed with the PANDUIT® GS4MT tool, which automatically tensions and cuts off excess tie. The system provides adjustable tension control and automatic cut-off for quick, consistent and secure installation with the lowest installed cost.

Enhanced PAN-STEEL® WAVE-TY™ Superior Grip Stainless Steel Ties

MLT Ties

- Patented wave-form spring maintains greater installed tension on non-resilient objects
- Tightly clamps on applications where other stainless steel ties will not function
- Retains tension on a solid bundle with minimal applied force
- Available in 316 material for the most corrosive environments
- Guarantees performance in critical applications
- Self-locking with low thread force

PAN-STEEL® Custom Length Banding System (Coated and Non-Coated)

Custom Length Banding System MBS, MBH, MBEH and MBSH Banding

- For applications that require bundling various bundle diameters
- Supplied in reels of 200 ft (61m), 250 ft (76m) or 1000 ft (305m)
- Bundle any size bundle diameter
- To use, pull out as much banding as needed, cut off using GS4MT with CAMT accessory or with shears and install with MTHS or MTHH banding heads

Polyester coating option provides:

- Low smoke
- Halogen free
- Temperature tolerance -40°F (-40°C) to -302°F (150°C)
- Good UV resistance

*Per SAE Standard AS23190/3 (formerly MIL). For additional details, refer to page F1.

**The GS4MT with CAMT accessory is recommended for cutting the banding. This system provides a straight cut-off which assists in head assembly and eliminates the need for shears.

***For information on installation tools, refer to pages B12-B14.

To determine the proper amount of banding required, use the following formula to determine length of banding needed

Calculate Diameter inches (mm) x 3.14 + 3 inches (76mm)

Example: 10 in. (250mm) Diameter Bundle

10 in. (250mm) x 3.14 = 31.40 + 3 in. (76mm) = 34.40 in. or 35 in. (861mm) of banding required.

MTHS, MTHH, MTHEH and MTHSH Banding Heads

- To use, take one end of the cut banding and bend back 1/2" (13mm)
- Take a self-locking head and slide it the entire length of the band until it reaches the bend
- Bend tail flat against bottom of banding head to complete assembly

PAN-STEEL® Coated Stainless Steel Cable Ties

Enhanced Patented Nylon 11 Selectively Coated Ties – MLTC Series

- For communication and electrical cables
- Strength of steel, the protection of nylon; the nylon coating provides protection for the cables
- Available in loop tensile strength of 250 lbs.
- Base metal 316 grade stainless steel for excellent resistance to temperature extremes, corrosion, weather, chemicals, salt sprays and UV radiation

Nylon 11 Coating:

- Resistance to chemicals and salt sprays
- Halogen-free
- Temperature tolerance -40°F (-40°C) to 285°F (140°C)
- Coating thickness .003 in. (.08mm) / .005 in. (.13mm) per side

PCS Cushion Sleeve

MLT Ties

- Black vinyl sleeving slips on standard and heavy cross section *PAN-STEEL*® Stainless Steel Ties and Custom Length Banding
- Used on applications requiring improved gripping on non-resilient objects
- Can be used indoors or outdoors (excellent ultraviolet resistance, good resistance to petroleum, and many chemicals)
- Provides full separation between the ties and the material to which you are fastening
- Operating temperature range 41°F – 167°F (5°C to 75°C)

PAN-STEEL® Double Wrapped Stainless Steel Cable Ties

PAN-STEEL® Double Wrapped Stainless Steel Cable Ties — MLTDH Series

Cable tie body passes through head two times

- Available in 304 and 316 stainless steel for extra high strength in critical applications
- Allow for tighter tensioning on non-resilient bundles
- Available in .31 in. (7.9mm), .50 in. (12.7mm), .625 in. (15.9mm) width for bundle diameters ranging from 1-8 in. (203mm)
- Loop tensile strength up to 1200 lbs. (5340 N)
- Self-locking ties — no tools required
- Optional tooling is available to speed installation and lower installed costs

Installation Tools for All Stainless Steel Cable Ties and Custom Length Banding System

A large selection of state-of-the-art installation tooling allows you to choose the proper tool to meet all your requirements, no matter what your application. These tools are lightweight and easy to operate. Because they are fast and efficient they speed cable tie installation and lower your total installed cost. The *PANDUIT®* PPTMT and GS4MT tools automatically cut off excess tie when the pre-set tension level is reached.

ST3MT, PPTMT, HTMT, GS4MT, RT1HT

MLT Ties

MS Strapping

PPTMT Installation Tool

PPTMT (Pneumatic)

- Power assisted tool for fast and effortless installation
- Cable tie side entry for immediate positioning of tie and tool
- Controlled tension, fully adjustable
- Automatic cut-off
- One hand operation — lightweight
- Easy removal of excess tie
- Operates 85 PSI - 586 KPA Bar non-lubricated air and requires no special maintenance

Marking and ID

Power assisted (pneumatic tool) will automatically tension and cut off excess tie when predetermined tension is reached with the squeeze of a trigger.

Part Number	Part Description	Std. Pkg. Qty.
PPTMT	Pneumatic hand tool used with <i>PAN-STEEL®</i> Type MLT ties, Type MLTC coated ties, Type MLTDH double wrapped ties and <i>WAVE-TY™</i> Stainless Steel Ties. Automatically tensions and cuts off tie when predetermined tension is reached, providing more reliable and consistent installations. Ideal for high production applications. Installs standard .18 in. (4.6mm), light-heavy .25 in. (6.4mm) and heavy .31 in. (7.9mm) cross section ties.	1
PPH10	10 ft. (3 m) hose assembly; 1/8 in. (3.175 mm) NPT male connector	1
PL289N1	Filter regulator	1
KPPTMTG	Replacement gripper kit for PPTMT	1
KPPTMTB	Replacement blade kit for PPTMT	1

Accessories

Side Entry

Technical Info

Adjustment Features for PPTMT and GS4MT Tools*

Fast and Easy Selection

The cross-section of the cable tie being installed is clearly indicated on the knob. To change,

simply flip knob to proper cross-section indicator.

Tension Indicator

Each cross-section of cable ties can be installed with a variety of tensions to meet the application.

The proper tensions (listed on *PANDUIT®* cable tie packages) are clearly marked with this indicator.

To Change the Tension:

Turn clockwise to increase.

Turn counter-clockwise to decrease.

Index

*For information on GS4MT installation tool, refer to page B13.

GS4MT Installation Tool

Hand Operated Tool

- Single handle operation for fast installation
- Cable tie side entry for immediate positioning of tie and tool
- Controlled tension, fully adjustable
- Easy removal of excess tie
- Qualified product listed per SAE Standard MS90387-3
- Automatically tensions and cuts off tie when predetermined tension is reached, providing more reliable and consistent installations*
- Installs standard .18 in. (4.6mm), light-heavy .25 in. (6.4mm) and heavy .31 in. (7.9mm) cross section ties

Part Number	Part Description	Std. Pkg. Qty.
GS4MT	Used with standard, light-heavy and heavy cross section <i>PAN-STEEL</i> ® Type MLT ties, Type MLTC Coated ties, Type MLTDH Double Wrapped ties and <i>WAVE-TY</i> ™ Stainless Steel Ties.	1
K4M-BLD	Replacement cutter blade for GS4MT	1
K4MTG	Replacement tension gripper for GS4MT	1
CAMT	Cut-off accessory. Use this accessory with GS4MT tool to cut MBH or MBS continuous banding. Accessory drops in place for use.	1

* When installing over resilient objects (or made resilient by using PCS cushion sleeve).

CAMT

SIDE ENTRY

Tool Tension Lock Kit

To lock selector knob and tension level

To lock fine adjustment

- For applications requiring a locking device on either the selector knob (one cross-section size and tension only) or tension level adjustment (but allow cross-section size changes)
- Replacement blade kits and gripper replacement kits can be part of a scheduled maintenance plan or used when cut-offs are not clean and crisp

Part Number	Part Description	Std. Pkg. Qty.
TTLK3	Tool Tension Locking Kit for GS4MT and PPTMT installation tools.	1

Markets

ST3MT Installation Tool

Hand operated tool with installer controlled tension and cut-off.

- Cable tie side entry for immediate positioning of tie and tool
- One hand operation — lightweight
- Easy removal of excess tie
- Tool tension is controlled by installer. Lever actuated cut-off
- Rugged, lightweight, easy-to-operate pliers-type tool provides mechanical advantage

Part Number	Part Description	Std. Pkg. Qty.
ST3MT	Used with standard, light-heavy, heavy, and extra-heavy cross section <i>PAN-STEEL</i> ® Type MLT ties, Type MLTC coated ties, Type MLTDH double wrapped ties and <i>WAVE-TY</i> ™ Stainless Steel Ties.	1
KT3MG	Replacement tension gripper for ST3MT tool.	1

MLT Ties

MS Strapping

RT1HT Installation Tool

Hand operated tool with adjustable tension control and lever cut-off.

- Cable tie side entry for immediate positioning of tie and tool
- One or two hand tensioning with multi-position rear handle
- Adjustable tension control
- Lever actuated cut-off
- Easy removal of excess tie
- Ratchet style tool for high tension
- Rugged, lightweight, easy-to-operate ratchet tool provides mechanical advantage

Part Number	Part Description	Std. Pkg. Qty.
RT1HT	Used with extra-heavy and super-heavy cross section <i>PAN-STEEL</i> ® Type MLT ties, Type MLTFC coated ties and type MLTDH double wrapped ties.	1

Marking and ID

Accessories

HTMT Installation Tool

Installer controlled tension.

- Economical
- The coiled tie end remaining after tensioning assures a safe end
- No sharp edges
- Manual tension, no cut-off
- Installs ties parallel to the bundle

Part Number	Part Description	Std. Pkg. Qty.
HTMT	Used with standard, light-heavy and heavy cross section <i>PAN-STEEL</i> ® Type MLT ties, Type MLTC coated ties, Type MLTDH double wrapped ties and <i>WAVE-TY</i> ™ Stainless Steel Ties.	1

PAN-STEEL® Stainless Steel Strapping (MS Series)

PANDUIT® continues to provide innovative products that create the ultimate solution for strapping applications. A new buckle design and tension controlled installation tool offer a quick and safe installation for all harsh environments applications.

- Increased loop tensile strength for an extra margin of safety
- Increased retained tension for a more secure bundle
- No sharp edges after installation
- Simplified installation versus ear lock straps
- Fully assembled discrete lengths

PANDUIT® offers unique products to meet customer needs:

General Purpose Straps — Excellent performance in any environment, available in three widths

Fully Coated Straps — Strength of steel with the protection and safety of nylon

Custom Length Strapping System — For use with large bundles

Installation Tool — For controlled tension, lever cut-off and lower installed cost

PANDUIT® PAN-STEEL® System FOR HARSH ENVIRONMENTS

Markets

PANDUIT® PAN-STEEL® Stainless Steel Strapping System

MLT Ties

The PANDUIT® PAN-STEEL® Stainless Steel Strapping System reduces installation time and leaves no sharp edges.

- 3 widths available: 3/8 in. (9.5mm), 1/2 in. (12.7mm), and 5/8 in. (15.9mm)
- Burr-free sides
- 304 and 316 stainless steel
- Designed for use in critical applications where strength, radiation, weathering, corrosion, and temperature extremes are a concern
- Temperature range: -112°F (-80°C) to 1000°F (538°C)

MS Strapping

Unique Patented Locking Method

Buckle design provides a low finished profile

After tensioning, cut end is locked inside buckle — no exposed sharp edge

Marking and ID

Hooked Clamping Tab*

Bends strap body within retention area of buckle for increased loop tensile strength and full coverage of cut end of strap

Concave Cross-section*

Enhanced support to improve tensile strength

Cross Rib Support*

Enhanced rigidity for higher loop tensile strength

Concave Buckle Recess*

Increases body resistance for increased loop tensile strength

*Patents Pending

Technical Info

Index

The PANDUIT® Method Reduces Installation Time

1. Place strap around the material, insert tail of strap through buckle. Pull strapping tight and bend up to hold in place. Insert tail of strapping into tool nose section. Squeeze handle to tension.

2. Once proper tension is reached, maintain tension and raise tool 90° – 120° over buckle and pull down on cutter lever, cutting strap.

3. Remove tool, press cut end down and toward retaining tab.

4. Using the closure lever on the handle of the tool, bend retaining tab down and over cut end. Provides finished, safe, low profile closure.

PANDUIT® PAN-STEEL® System FOR HARSH ENVIRONMENTS

Markets

PAN-STEEL® Nylon Coated Stainless Steel Strapping

MLT Ties

- The strength of steel, the protection of nylon; the nylon coating provides protection for the bundles
- Available in loop tensile strength up to 800 lbs. (3560N)
- Base metal is 316 grade stainless steel for excellent resistance to temperature extremes, corrosion, weather, chemicals, salt sprays and UV radiation

Nylon 11 Coating

- 100% coated with Black Nylon 11, coating thickness .003 in. (.07 mm) / .005 in. (.13 mm) per side
- Halogen-free
- Good in applications at temperatures down to -40° F (-40° C)
- Excellent resistance to chemicals and salt sprays
- Upper temperature limit 285° F (140° C)

PAN-STEEL® System for Permanent Marking and Identification

The PAN-STEEL® System can be used to identify pipes, conduit, valves, cables and equipment in petrochemical plants, pulp and paper mills, refineries, offshore oil rigs and in many other harsh environments. It is designed to work with PANDUIT® MLT ties to provide the ultimate permanent identification solution.

- Long life
- Weather resistant
- Chemical resistant
- Temperature extremes
- Radiation resistant

PANDUIT® offers unique products to meet customer needs:

Custom laser marking — Sharp, crisp, high quality legends

Custom embossing — For rough and dirty applications

On-site marking devices — For quick and easy identification

Marker plates and tags — Sizes and styles for virtually all applications

Markets

Stainless Steel, Brass and Aluminum Marker Plates and Tags

- Identify pipes, conduit, valves, cables and equipment in petrochemical plants, pulp and paper mills, refineries, offshore oil rigs and in any other harsh environments
- All marker plates/tags can be custom marked by PANDUIT® with one of two computer controlled systems (laser or embosser) to provide permanent identification to resist corrosion, abrasion and radiation
- Use with PANDUIT® PAN-STEEL® Stainless Steel Cable Ties for fast installation at lowest installed cost

MLT Ties

Most tags are provided with one .25 in. (6.35mm) hole.

PAN-STEEL® Custom Marking Capabilities

Custom Marking Capabilities on PANDUIT® PAN-STEEL® Stainless Steel Cable Ties, Strapping, Metal Marker Plates/Tags and Anodized Aluminum Locks*

MLT Ties

PANDUIT® stainless steel cable ties, strapping, stainless steel, brass and aluminum marker plates/tags and anodized aluminum locks can be custom marked for identification of equipment, cables, hoses, pipes, conduit, etc. in petrochemical plants, power plants, pulp and paper mills, breweries, and many other applications. PANDUIT® in-house computer controlled custom marking systems provide sharp, crisp, high quality legends. Sequential numbering for serialization is available.

MS Strapping

* Anodized aluminum locks can only be marked by the laser system.

Marking and ID

Accessories

Technical Info

LASER MARKING SYSTEM

- Used on all stainless steel cable ties, strapping, metal marker plates/tags and anodized aluminum locks
- BOLD block letters
- Upper and lower case character capability
- Alphanumeric and sequential numbering ability

Character Sizes** Available:

1/8 in. (3.18mm) 1/4 in. (6.35mm) 3/16 in. (4.77mm)
5/16 in. (7.94 mm) 1/2 in. (12.7 mm)

**Contact customer service for other available character sizes.

EMBOSSING SYSTEM

- Used on metal marker plates and tags which are a maximum of .020 in. (0.5 mm) thick
- Excellent for applications that are exposed to occasional painting and excessive dirt
- Upper case "raised" character capability only
- Alphanumeric and sequential numbering ability

Character Sizes** Available:

1/8 in (3.18 mm) 3/16 in. (4.77 mm)

Technical Info

Rigorous Tests and Physical Properties of Stainless Steel Ties

STRENGTH: PANDUIT® PAN-STEEL® Stainless Steel Ties are tested per the U.S. Military Specification MIL-S-23190, minimum loop tensile test. This test consists of applying a tie to a split mandrel and then measuring the force required to separate the (2) halves until the tie fails. These minimum loop tensile strengths are given for the various products on [pages B4 through B6](#).

TEMPERATURE EXTREMES: PANDUIT® PAN-STEEL® Stainless Steel Ties are 100% stainless steel in the alloy provided (locking head, locking ball and body all provided from the same grade of material ordered).

Various temperature tests have been successfully completed. One such test is the U.S. Military Temperature Cycling Test per Thermal Shock Method 107, Test Condition B of MIL-STD-202F. This test exposes the parts from low temperature -85° F (-65°C) to high temperature 275° F (135°C) to low temperature -85° F (-65°C). After exposure, the parts must be free of cracks, distortions, breaks, release of locking device, and meet the minimum loop tensile requirements.

VIBRATION: PANDUIT® PAN-STEEL® standard cross section ties have passed the U.S. Military random vibration Test Method 214. Test Condition II, Letter J of MIL-STD-202. This test consists of applying parts to a bundle and then vibrating them with random vibration for 8 hours in each of two mutually perpendicular directions. The parts are then subjected to further temperature testing and finally have to pass the minimum loop tensile strength test.

Index

Rigorous Tests and Physical Properties of Stainless Steel Ties (continued)

SALT SPRAY: PANDUIT® PAN-STEEL® Stainless Steel Ties have been subjected to salt spray tests without signs of corrosion or reduction in performance.

OUTDOOR EXPOSURE: PANDUIT® PAN-STEEL® Stainless Steel Ties have been exposed outdoors at New Lenox, Illinois USA since 1985. At the printing of this catalog, there has been no sign of corrosion or loss of performance.

FLUID IMMERSION: PANDUIT® PAN-STEEL® Stainless Steel Ties were immersed in: 1-Hydraulic Fluid, 2-Turbine Fuel, 3-Lubricating Oil, and 4-Isopropyl Alcohol for (4) hours at temperatures of 122° F (50° C). Per SAE Standard AS23190/3, the parts were then subjected to and passed the minimum loop tensile test.

RADIATION: Installed cable ties of various materials have been exposed to different amounts of radiation to determine the maximum acceptable limit. These tests were conducted by PANDUIT® to determine the acceptability for use in various areas of nuclear power plants (accumulated over 40 year life). Radiation resistance is 2x10⁸ rads.
