\*\*To order in bulk, replace -C in the part number with -M for a bulk package of 1000 and replace -L with -D for a bulk package of 500.

‡UL and CSA approved tooling/product combinations. For crimping tool information, see pages D1.83, D1.84, D1.86 and D1.88.

## Locking Fork Terminal, Vinyl Insulated – Funnel Entry

### Type PV-LF

- Locks in place for secure connection
- Fork design provides for fast and easy installation, without the need to remove fastener
- Insulation support helps to prevent wire damage in bending applications

- UL Flammability UL 94V-0, maximum insulation temperature 221°F (105°C)
- Internal barrel serrations assure good wire contact and maximum tensile strength
- UL and CSA rated to 600 V per UL 486

## Locking Fork Terminal, Vinyl Insulated – Expanded Insulation

### Type PV-LFX

- Expanded wire entry designed to accommodate wire with a larger insulation thickness
- Locks in place for secure connection
- Insulation support helps to prevent wire damage in bending applications
- Brazed seam protects terminal barrel from splitting during the crimp process
- UL Flammability UL 94V-0, maximum insulation temperature 221°F (105°C)
- Internal barrel serrations assure good wire contact and maximum tensile strength
- UL and CSA rated up to 600 V per UL 486

## Short Locking Fork Terminal, Nylon Insulated

### Type PN-SLF

- Locks in place for a secure connection in limited spaces
- Fork design provides for fast and easy installation, without the need to remove fastener
- Metal insulation grip sleeve crimps to wire insulation, providing protection to the crimp joint during high vibration applications
- Internal barrel serrations assure good wire contact and maximum tensile strength
- UL Flammability UL 94V-2/HB, maximum insulation temperature 221°F (105°C)
- UL and CSA rated up to 600 V per UL 486

\*\*To order in bulk, replace -C in the part number with -M for a bulk package of 1000 and replace -L with -D for a bulk package of 500.

For crimping tool information, see pages D1.84 and D1.88.

## Short Locking Fork Terminal, Nylon Insulated – Funnel Entry

### Type PNF-SLF

- Locks in place for a secure connection in limited spaces
- Fork design provides for fast and easy installation, without the need to remove fastener
- Metal insulation grip sleeve crimps to wire insulation, providing protection to the crimp joint during high vibration applications
- Internal barrel serrations assure good wire contact and maximum tensile strength
- UL Flammability UL 94V-2/HB, maximum insulation temperature 221°F (105°C)
- UL and CSA rated up to 600 V per UL 486

## Flanged Fork Terminal, Vinyl Insulated – Funnel Entry

### Type PV-FF

- Flange design provides extra secure connection on a variety of applications
- Insulation support helps to prevent wire damage in bending applications
- Brazed seam protects terminal barrel from splitting during the crimp process

- UL Flammability UL 94V-0, maximum insulation temperature 221°F (105°C)
- Internal barrel serrations assure good wire contact and maximum tensile strength
- UL and CSA rated up to 600 V per UL 486

## UL LISTED CERTIFIED Short Locking Fork Terminal, Non-Insulated

### Type P-SLF

- Locks in place for a secure connection in limited spaces
- Fork design provides for fast and easy installation, without the need to remove fastener
- Internal barrel serrations assure good wire contact and maximum tensile strength
- Brazed seam protects terminal barrel from splitting during the crimp process
- Barrel of terminal internally beveled to provide quick and easy wire insertion
- UL and CSA rated up to 2000 V per UL 486
- Maximum recommended operating temperature 302°F (150°C)

## UL LISTED CERTIFIED Heat Shrink, Fork Terminal

### Type PH-F

- Heat shrink polyolefin sleeve with hot melt adhesive protects against moisture
- Heat shrink sleeving forms a protective barrier to provide environmentally sealed terminations ideal for high moisture applications
- Fork design provides for fast and easy installation, without the need to remove fastener
- Brazed seam protects terminal barrel from splitting during the crimp process
- Heat shrink insulation is completed with a standard heat gun
- Minimum continuous operating temperature -65°F (-55°C)
- Maximum continuous operation temperature 230°F (110°C)
- Shrink temperature 250°F (120°C)

| Part Number | Wire Range  | Color Code | Max. Ins. | Stud Size | Figure Dimensions (In.) |     | Wire Strip Length | Recommended Installation Tool | Std. Pkg. Qty. | Std. Ctn. Qty. |

For crimping tool information, see page D1.85.

A. System Overview

## Features and Benefits – PAN-TERM® Metric Terminals

All PANDUIT terminals feature high quality materials made with electrolytic copper for high conductivity and are tin-plated for corrosion resistance.

B1. Cable Ties

B2. Cable Accessories

B3. Stainless Steel Ties

C1. Wiring Duct

C2. Surface Raceway

C3. Abrasion Protection

C4. Cable Management

### Nylon Insulated Terminals with Insulation Grip Sleeve Type PMN or PMNF

Internal barrel serrations assure good wire contact and maximum tensile strength

Maximum insulation temperature 221°F (105°C)

Sleeved barrel assures crimp reliability

Insulation grip sleeve provides a superior insulation crimp for high vibration and high strain relief applications

Color-coded insulation identifies wire range

Funnel entry for faster insertion and lower installed cost

Rated up to 600 V per UL 486.

Flammability – UL 94V-21HB.

Proprietary blend of UL 094V-2 and UL 94HB flammability related materials.

### Vinyl Insulated Terminals with Insulation Support Type PMV

Internal barrel serrations assure good wire contact and maximum tensile strength

Maximum insulation temperature 221°F (105°C)

Color-coded insulation identifies wire range

Brazed seam assures crimp reliability

Insulation crimp provides insulation support to protect electrical crimp

Funnel entry for faster insertion and lower installed cost

Rated up to 600 V per UL 486.

Flammability – UL 94V-0.

### Non-Insulated Terminals Type PM

Product markings provide easy identification of wire size

Maximum recommended operating temperature 302°F (150°C)

Extended barrel length assures a good quality crimp and makes crimping easier

Internal barrel serrations assure good wire contact and maximum tensile strength

Brazed seam assures crimp reliability

Internally beveled barrel for quick easy wire insertion

Rated up to 2000 V per UL 486.

## Metric Ring Terminal, Nylon Insulated – Funnel Entry

### Type PMNF-R

- Ring tongue design assures a secure connection in high vibration applications
- Metal insulation grip sleeve crimps to wire insulation, providing protection to the crimp joint during high vibration applications
- Internal barrel serrations assure good wire contact and maximum tensile strength
- Maximum insulation temperature 221°F (105°C)

A. System Overview

## Metric Ring Terminal, Vinyl Insulated – Funnel Entry

B1. Cable Ties

### Type PMV-R

- Ring tongue design assures a secure connection in high vibration applications
- Insulation support helps to prevent wire damage in bending applications
- Brazed seam protects terminal barrel from splitting during the crimp process
- Internal barrel serrations assure good wire contact and maximum tensile strength
- Maximum insulation temperature 221°F (105°C)

## Metric Fork Terminal, Nylon Insulated – Funnel Entry

### Type PMNF-F

- Fork design provides for fast and easy installation, without the need to remove fastener
- Metal insulation grip sleeve crimps to wire insulation, providing protection to the crimp joint during high vibration applications
- Internal barrel serrations assure good wire contact and maximum tensile strength
- Maximum insulation temperature 221°F (105°C)

## Metric Fork Terminal, Vinyl Insulated – Funnel Entry

### Type PMV-F

- Ring tongue design assures a secure connection in high vibration applications
- Insulation support helps to prevent wire damage in bending applications
- Brazed seam protects terminal barrel from splitting during the crimp process
- Internal barrel serrations assure good wire contact and maximum tensile strength
- Maximum insulation temperature 221°F (105°C)

## Metric Fork Terminal, Non-Insulated

B1. Cable Ties

### Type PM-F

- Fork design provides for fast and easy installation, without the need to remove fastener
- Internal barrel serrations assure good wire contact and maximum tensile strength
- Brazed seam protects terminal barrel from splitting during the crimp process
- Barrel of terminal internally beveled to provide quick and easy wire insertion
- Maximum recommended operating temperature 302°F (150°C)

## Steel Kit Boxes

- Latch prevents accidental opening
- Once lid is closed, terminals remain in their compartments
- Handle for portability or as drawer pull when used in rack

- Drop-in label area on front measures: 2.13"H x 13.75"W x 9.75"D (54.0mm x 349.3mm x 247.7mm)

| Part Number | Part Description   | Std. Pkg. Qty. |
|-------------|--|----------------|
| K-1000      | Empty steel box, 20 terminal compartments and one tool compartment, dimensions: 2.00"H x 13.33"W x 9.33"D (50.8mm x 338.6mm x 237.0mm).  | 1              |
| K-1001      | Empty steel kit box, 15 terminal compartments and two tool compartments, box dimensions: 2.00"H x 13.33"W x 9.33"D (50.8mm x 338.6mm x 237.0mm).                               | 1              |
| K-1100      | Steel box and CT-100 crimping tool.  | 1              |
| K-1102Y     | Includes the following: (100) PV18-6LF; PV18-8LF; PV14-8LF; PV14-10LF; BSV18X; BSV14X; (50) PV10-10LF; BSV10X; (1) CT-100 tool; K-1000 box.                                    | 1              |
| K-1103Y     | Includes the following: (100) DV18-250B; DV14-250B; DV14-250MB; D18-250; D14-250; (50) DV10-250; D10-250; (1) CT-100 tool; K-1000 box.   | 1              |
| K-1104      | Includes the following: (50) PN18-10R; PN14-6R; PN14-10R; PN18-6F; PN14-6F; PN14-10F; (25) PN10-10R; PN10-56R; PN10-10F; BSN14; BSN10; JN418-212; (1) CT-100 tool; K-1000 box. | 1              |

## Steel Slide Racks

- Steel boxes for cable tie kits and K-1000 terminal kits
- Steel boxes, storage slide racks, and base can be combined for neat and organized storage of cable ties and terminals

- Rugged and durable steel construction
- Empty boxes, full kits, slide racks and base are purchased according to your application needs

| Part Number | Part Description  | Std. Pkg. Qty. |
|-------------|---|----------------|
| SR2         | 2-drawer slide rack to hold K-504 cable tie kit or K-1000 series terminal kit. Dimensions: 6.25"H x 15.25"W x 11.75"D (158.7mm x 387.4mm x 298.5mm) | 1              |
| SR4         | 4-drawer slide rack to hold K-1000 series terminal kit. Dimensions: 11.25"H x 15.25"W x 11.75"D (285.8mm x 387.4mm x 298.5mm)                       | 1              |
| SR6         | 6-drawer slide rack to hold K-1000 series terminal kit. Dimensions: 16.38"H x 15.25"W x 11.75"D (416.1mm x 387.4mm x 298.5mm)                       | 1              |

Base and slide racks are sold separately.

| Slide racks will accommodate the following PANDUIT kits: |           |
|--|-----------|

## PAN-TERM® DISCONNECTS

PANDUIT® PAN-TERM® Disconnects are designed and precision made to function as a reliable method of making quick, repeatable interconnections. Available with nylon, premium nylon, vinyl insulation or non-insulated.

- Fully insulated design provides excellent protection from electrical shorts and provides additional installer protection for safety from electrical shocks
- Funnel entry speeds insertion and minimizes turned back wire strands
- Integrated metal insulation grip provides double crimp insulation grip for high vibration or conductor strain environments on select SUPRA-GRIP™ Disconnects and DISCO-LOK™ Disconnects and DISCOGRIP™ Disconnects
- Applicable sizes are UL Listed and CSA Certified, as noted
- Wide assortment of manual, controlled cycle, battery operated hydraulic and pneumatic crimping tools for reliable connections at the lowest installed cost

PANDUIT continually provides new designs to meet the application challenges encountered by our customers. PANDUIT offers a wide assortment of PAN-TERM® termination products at the lowest installed cost.

### Nylon Fully Insulated Female Receptacles and Male Tabs Type DNF-FIB

Available in tab sizes to accommodate .110", .187", .205" or .250" tabs

Fully insulated design provides protection from electrical shorts

Expanded wire entry (on select sizes) accommodates large insulation or multiple wires

Maximum insulation temperature 257°F (125°C)

Insulation support restricts excessive wire movement to minimize stress on crimp joint

Funnel entry for faster wire insertion and lower installed cost

UL and CSA rated up to 600 V per UL 310.

### DISCO-GRIP™ Premium Nylon Fully Insulated Female Receptacles and Male Tabs Type DNF and DPF

Available in tab sizes to accommodate .110", .187", .205" or .250" tabs

Fully insulated design provides protection from electrical shorts

Maximum insulation temperature 221°F (105°C)

Funnel entry for faster wire insertion and lower installed cost

UL and CSA rated up to 600 V per UL 310. Male products available .250" width in standard and oversized housing configurations.

### SUPRA-GRIP™ Nylon Fully Insulated Female Disconnects Type DNG-FB

Available in tab sizes to accommodate .187" or .250" tabs

Fully insulated design provides protection from electrical shorts

Maximum insulation temperature 221°F (105°C)

Funnel entry for faster wire insertion and lower installed cost

Fully integrated metal insulation grip for high vibration, high strain relief, and double crimp requirements

UL and CSA rated up to 600 V per UL 310.

### DISCO-LOK™ Nylon Fully Insulated Locking Female Disconnects Type DNG-FL

Available in tab sizes to accommodate .250" tabs

Unique locking mechanism allows for low insertion forces (mating) and positive locking for secure connections

Maximum insulation temperature 221°F (105°C)

Funnel entry for faster wire insertion and lower installed cost

Insulation grip sleeve provides a superior insulation crimp for high vibration and high strain relief applications

UL and CSA rated up to 300 V.

PANDUIT extensive line of tooling is specifically designed for optimum crimping performance.

See pages D1.83 – D1.88.

PANDUIT designs and manufactures a full line of labeling products, software, and printers to assist you with your labeling requirements.

See pages E1.1 – E2.30.

## Features and Benefits – PAN-TERM® Disconnects (continued)

### Nylon Barrel Insulated Female Receptacles and Male Tabs Type DNF

Available in tab sizes to accommodate .110", .187", .205" or .250" tabs

Maximum insulation temperature 221°F (105°C)

Funnel entry for faster wire insertion and lower installed cost

Insulation grip sleeve provides a superior insulation crimp for high vibration and high strain relief applications

UL and CSA rated up to 300 V.  
Male products available .250" width.

### Vinyl Barrel Insulated Female Receptacles and Male Tabs Type DV and DVF

Available in tab sizes to accommodate .187", .205", or .250" tabs

Maximum insulation temperature 221°F (105°C)

Insulation support to protect electrical crimp

Insulation grip sleeve provides a superior insulation crimp for high vibration and high strain relief applications

UL and CSA rated up to 600 V.  
Male products available .250" width.  
Flammability – UL 94V-0.

### Non-Insulated Female Receptacles and Male Tabs Type D

Available in tab sizes to accommodate .187" or .250" tabs

Sleeved barrel assures crimp reliability

Maximum recommended operating temperature 302°F (150°C)

Male products available .250" width.

PANDUIT wiring duct offers a wide variety of sizes and types to meet the wire capacity needs and space constraints of the smallest wall mounted to the largest integrated systems.

See pages C1.1 – C1.52.

A comprehensive selection of cable ties used to bundle, mount, and identify wire and cable.

See pages B1.1 – B1.122.

### **SUPRA-GRIP™ Female Disconnect, Nylon Fully Insulated – Funnel Entry**

#### Type DNG-FB

- Disconnect can be inserted and removed from the male tab without the use of tools for lower installed cost
- Flared barrel extension integrated into stamping to provide insulation grip for double crimp requirements
- Internal barrel serrations assure good wire contact and maximum tensile strength
- Internal wire stop assures proper length of insertion into terminal barrel, providing a higher-quality connection
- Mates with DNF-FIMB Family

\*UL Recognized for use with copper alloy tabs.

\*\*To order in bulk, replace -C in the part number with -M for a bulk package of 1000.

For crimping tool information, see page D1.84.

A. System Overview

## **Disco-Lok™ Female Disconnect, Nylon Fully Insulated – Funnel Entry**

### Type DNG-FL

- Disconnect can be inserted and removed from the male tab without the use of tools for lower installed cost
- Unique locking mechanism design allows for low insertion forces (mating) and positive lock for high vibration applications where a secure connection is mandatory
- Fully insulated design provides protection from electrical shorts
- Flared barrel extension integrated into stamping to provide insulation grip for double crimp requirements
- Insulation housing moves back and forth to engage and disengage locking mechanism for repeated use.
- Specialty tool required to install this disconnect (CT-1014)
- Mates with DNF-FIMB family

## **Male/Female Coupler, Nylon Fully Insulated – Funnel Entry**

### Type DNF

- Disconnect can be inserted and removed from the male tab without the use of tools for lower installed cost
- Fully insulated design provides protection from electrical shorts
- Metal insulation grip sleeve crimps to wire insulation, providing protection to the crimp joint during high vibration applications
- Internal barrel serrations assure good wire contact and maximum tensile strength
- Internal wire stop assures proper length of insertion into terminal barrel, providing a higher quality connection
- UL Flammability UL 94V-2/HB, maximum insulation temperature 221°F (105°C)
- Coupler, male, and female parts sold separately

## Female Disconnect,, Nylon Fully Insulated – Funnel Entry

### Type DNF-FIB

- Disconnect can be inserted and removed from the male tab without the use of tools for lower installed cost
- Premium nylon insulation retains its shape when crimped and provides a tight grip around the wire insulation for maximum strain relief
- Fully insulated design provides protection from electrical shorts
- Internal wire stop assures proper length of insertion into terminal barrel, providing a higher quality connection
- Disconnects available in common industry tab sizes
- UL and CSA rated up to 600 V per UL 310

## Female Disconnect, Nylon Fully Insulated – Funnel Entry, Metal Collar

### Type DNF-FI

- Disconnect can be inserted and removed from the male tab without the use of tools for lower installed cost
- Fully insulated design provides protection from electrical shorts
- Internal wire stop assures proper length of insertion into terminal barrel, providing a higher quality connection
- Barrel design with larger outside diameter for use with more common hand tools
- UL and CSA rated up to 600 V per UL 310

## DISCOGRIP™ Male Disconnect, Premium Nylon Fully Insulated – Funnel Entry

### Type DPF-FIM

- Disconnect can be inserted and removed from the male tab without the use of tools for lower installed cost
- Premium nylon insulation retains its shape when crimped and provides a tight grip around the wire insulation for maximum strain relief
- Fully insulated design provides protection from electrical shorts
- Oversized housing designed for maximum versatility to mate with most commercially available fully insulated female disconnects
- Internal wire stop assures proper length of insertion into terminal barrel, providing a higher quality connection
- UL and CSA rated up to 600 V per UL 310

| Part Number             | Wire Range  | Color Code | Max. Ins. | Figure Dimensions (In.) |     |     | Tab Size    | Recommended Installation Tool | Std. Pkg. Qty.** | Std. Ctn. Qty. |

\*Not UL listed or CSA approved.

\*\*To order in bulk, replace -C in the part number with -M for a bulk package of 1000 and replace -L with -D for a bulk package of 500.

‡UL and CSA approved tooling/product combinations. For crimping tool information, see pages D1.84, D1.86, and D1.88.

## Heat Shrink Disconnects, Fully Insulated – Funnel Entry

### Type DNH

- Disconnect can be inserted and removed from the male tab without the use of tools for lower installed cost
- Heat shrink polyolefin sleeve with hot melt adhesive protects against moisture
- Heat shrink sleeving forms a protective barrier to provide environmentally sealed terminations ideal for high moisture applications
- Heat shrink sleeving provides additional level of strain relief for the wire
- Minimum continuous operating temperature -65°F (-55°C)
- Maximum continuous operation temperature 230°F (110°C)
- Shrink temperature 250°F (120°C)

## Female Disconnect, Nylon Barrel Insulated – Funnel Entry

### Type DNF

- Disconnect can be inserted and removed from the male tab without the use of tools for lower installed cost
- Fully insulated design provides protection from electrical shorts
- Metal insulation grip sleeve crimps to wire insulation, providing protection to the crimp joint during high vibration applications
- Internal barrel serrations assure good wire contact and maximum tensile strength
- Internal wire stop assures proper length of insertion into terminal barrel, providing a higher quality connection
- UL Flammability UL 94V-2/HB, maximum insulation temperature 194°F (90°C)

A. System Overview

B1. Cable Ties

## Female Disconnect, Vinyl Barrel Insulated – Funnel Entry

### Type DVF

- Disconnect can be inserted and removed from the male tab without the use of tools for lower installed cost
- Metal insulation grip sleeve crimps to wire insulation, providing protection to the crimp joint during high vibration applications
- Internal barrel serrations assure good wire contact and maximum tensile strength
- Internal wire stop assures proper length of insertion into terminal barrel, providing a higher quality connection
- UL Flammability UL 94V-0, maximum insulation temperature 194°F (90°C)

## Female Disconnect, Non-Insulated – Metal Sleeve

### Type D

- Disconnect can be inserted and removed from the male tab without the use of tools for lower installed cost
- Sleeved barrel helps to facilitate high mechanical and electrical performance when crimping
- Barrel of terminal internally beveled to provide quick and easy wire insertion
- Internal barrel serrations assure good wire contact and maximum tensile strength
- Internal wire stop assures proper length of insertion into terminal barrel, providing a higher quality connection
- Maximum recommended operating temperature 302°F (150°C)

## Right Angle Female Disconnect, Nylon Fully Insulated – Funnel Entry

### Type DNFR-FIB

- Right angle design for use in limited space applications
- Fully insulated design provides protection from electrical shorts
- Internal wire stop assures proper length of insertion into terminal barrel, providing a higher quality connection
- Disconnect can be inserted and removed from the male tab without the use of tools for lower installed cost
- Disconnects available in common industry tab sizes

\*Not CSA Certified.

\*\*To order in bulk, replace -C in the part number with -M for a bulk package of 1000. For crimping tool information, see page D1.83.

## Piggyback Disconnect, Vinyl Insulated

### Type DV-P

- Combination of female disconnect and male tab allows versatility in points of connection
- Multiple connection points allow additional circuits to be added to existing equipment without expensive rework
- Metal insulation grip sleeve crimps to wire insulation, providing protection to the crimp joint during high vibration applications

| Part Number  | Wire Range  | Color Code | Max. Ins. | Figure Dimensions (In.) |     | Tab Size    | Recommended Installation Tool             | Std. Pkg. Qty.** | Std. Ctn. Qty. |
|--------------|-------------|------------|-----------|-------------------------|-----|-------------|---|------------------|----------------|

\*\*To order in bulk, replace -C or CY in the part number with -M or MY for a bulk package of 1000. For crimping tool information, see pages D1.83, D1.84, and D1.88.

## Disconnect Adapter, Non-Insulated

### Type D-A

- Couples two female disconnects to one male disconnect (all .250 x .032)
- Multiple connection points allow additional circuits to be added to existing equipment without expensive rework
- Disconnect can be inserted and removed from the male tab without the use of tools for lower installed cost

| Part Number | Figure Dimensions (In.) |     | Tab Size    | Std. Pkg. Qty.** | Std. Ctn. Qty. |
|-------------|-------------------------|-----|-------------|------------------|----------------|

## **SP** CERTIFIED Male Disconnect, Nylon Barrel Insulated – Funnel Entry

### Type DNF-M

- Male tab couples with (all .250 x .032) female disconnects
- Male tab can be inserted and removed from the female disconnect without the use of tools for lower installed cost
- Metal insulation grip sleeve crimps to wire insulation, providing protection to the crimp joint during high vibration applications
- Internal barrel serrations assure good wire contact and maximum tensile strength
- Maximum insulation temperature 221°F (105°C)

### Pin Terminal, Vinyl Insulated – Funnel Entry Type PV-P

C2. Surface Raceway

- Solid pin designed to prevent damage to the wire from over tightening, resulting in a reliable electrical connection
- Insulation support helps to prevent wire damage in bending applications
- Brazed seam protects terminal barrel from splitting during the crimp process

- Internal barrel serrations assure good wire contact and maximum tensile strength
- UL rated up to 600 V per UL 486 (18 and 14 gauge only)
- For use with pin-type terminal blocks

## Features and Benefits – PAN-TERM® Metric Disconnects

B1. Cable Ties

### Metric Nylon Fully Insulated Female and Male Tabs Type DMNF-FIB

Available in tab sizes to accommodate 2.8, 4.8, and 6.3mm tabs

Fully insulated design provides protection from electrical shorts

Expanded wire entry (on select sizes) accommodates large insulation or multiple wires

Maximum insulation temperature 257°F (125°C)

Insulation support restricts excessive wire movement to minimize stress on crimp joint

Funnel entry for faster wire insertion and lower installed cost

Rated at 600 V.

### Nylon Barrel Insulated Female Receptacles and Male Tabs Type DMNF

Available in tab sizes to accommodate 2.8, 4.8, and 6.3mm tabs

Maximum insulation temperature 194°F (90°C)

Funnel entry for faster wire insertion and lower installed cost

Rated at 600 V.

### Vinyl Barrel Insulated Female Receptacles Type DMV

Available in tab sizes to accommodate 2.8, 4.8, and 6.3mm tabs

Maximum insulation temperature 221°F (105°C)

Insulation support to protect electrical crimp

Insulation grip sleeve provides a superior insulation crimp for high vibration and high strain relief applications

Rated at 600 V.  
Flammability UL 94V-0.

### Non-Insulated Female Receptacles and Male Tabs Type DM

Available in tab sizes to accommodate 2.8, 4.8, and 6.3mm tabs

Maximum recommended operating temperature 302°F (150°C)

Sleeved barrel assures crimp reliability

PANDUIT extensive line of tooling is specifically designed for optimum crimping performance.

See pages D1.83 – D1.88.

PANDUIT designs and manufactures a full line of labeling products, software, and printers to assist you with your labeling requirements.

See pages E1.1 – E2.30.

## Female Metric Disconnect, Fully Insulated Nylon – Funnel Entry

### Type DMNF-FIB

- Disconnect can be inserted and removed from the male tab without the use of tools for lower installed cost
- Fully insulated design provides protection from electrical shorts
- Disconnects available in common industry tab sizes
- Internal wire stop assures proper length of insertion into terminal barrel, providing a higher quality connection

## Female Metric Disconnect, Non-Insulated – Metal Sleeve

E2. Labels

### Type DM

- Disconnect can be inserted and removed from the male tab without the use of tools for lower installed cost
- Sleeved barrel helps to facilitate high mechanical and electrical performance when crimping
- Barrel of terminal internally beveled to provide quick and easy wire insertion
- Internal barrel serrations assure good wire contact and maximum tensile strength
- Internal wire stop assures proper length of insertion into terminal barrel, providing a higher quality connection

## Piggyback Metric Disconnect, Vinyl Barrel Insulated

### Type DMV-P

- Combination of female disconnect and male tab allows versatility in points of connection
- Metal insulation grip sleeve crimps to wire insulation, providing protection to the crimp joint during high vibration applications
- Multiple connection points allow additional circuits to be added to existing equipment without expensive rework

For crimping tool information, see page D1.84.

## Male Metric Disconnect, Fully Insulated Nylon – Funnel Entry

### Type DMNF-FIM

- Male tab couples with (all .250 x .032) female disconnects
- Fully insulated design provides protection from electrical shorts
- Male tab can be inserted and removed from the female disconnect without the use of tools for lower installed cost
- Internal barrel serrations assure good wire contact and maximum tensile strength

| Part Number   | Wire Range (mm <sup>2</sup> ) | Color Code | Max. Ins. | Figure Dimensions (mm) |      |      | Tab Size (mm) | Recommended Installation Tool | Std. Pkg. Qty. | Std. Ctn. Qty. |

For crimping tool information, see pages D1.84 and D1.88.

## Male Metric Disconnect, Nylon Barrel Insulated – Funnel Entry

### Type DMNF-M

- Male tab couples with (all .250 x .032) female disconnects
- Male tab can be inserted and removed from the female disconnect without the use of tools for lower installed cost
- Metal insulation grip sleeve crimps to wire insulation, providing protection to the crimp joint during high vibration applications
- Internal barrel serrations assure good wire contact and maximum tensile strength

## Male Metric Disconnect, Non-Insulated – Butted Seam

B1. Cable Ties

### Type DM-M

- Male tab couples with (all 250 x .032) female disconnects
- Male tab can be inserted and removed from the female disconnect without the use of tools for lower installed cost
- Internal barrel serrations assure good wire contact and maximum tensile strength
- Barrel of terminal internally beveled to provide quick and easy wire insertion

C3. Abrasion Protection

## Metric Pin Terminal, Vinyl Insulated – Funnel Entry

C4. Cable Management

### Type PMV-P

- Solid pin designed to prevent damage to the wire from over tightening, resulting in a reliable electrical connection
- For use with pin-type terminal blocks
- Insulation support helps to prevent wire damage in bending applications
- Brazen seam protects terminal barrel from splitting during the crimp process
- Internal barrel serrations assure good wire contact and maximum tensile strength

## PAN-TERM® SPLICES

PANDUIT® PAN-TERM® Splices are designed and manufactured for fast assembly, and long reliable performance. As the demand for splices increases, it becomes essential to provide a complete system for termination products. We provide an extensive line of tooling designed specifically to provide optimum performance when used as a system for terminating.

- Suitable for in-line, parallel, and group splicing of wires
- Nylon and vinyl insulated as well as non-insulated
- Available in sizes from #26 – 10 AWG
- Internal wire stops on butt splices prevent over insertion of wires
- Applicable sizes are UL Listed and CSA Certified, as noted
- Wide assortment of manual, controlled cycle, battery operated hydraulic and pneumatic crimping tools for reliable connections at the lowest installed cost

PANDUIT continually provides new designs to meet the application challenges encountered by our customers. PANDUIT offers a wide assortment of PAN-TERM® termination products to meet customer needs at the lowest installed cost.

## Features and Benefits – PAN-TERM® Splices and Wire Joints

B1. Cable Ties

### Non-Insulated Wire Joints Type J

Only one crimp needed to complete splice

Maximum recommended operating temperature 302°F (150°C)

Internally beveled barrel for quick easy wire insertion

UL and CSA rated up to 600 V.

### Non-Insulated Parallel Splices Type PS

Seamless tubular barrel provides consistent high performance quality crimps

Maximum recommended operating temperature 302°F (150°C)

Only one crimp needed to complete splice

UL and CSA rated up to 300 V.

### Nylon Wire Joints Type JN

Fully insulated housing protects crimp joint

Maximum insulation temperature 221°F (105°C)

Only one crimp needed to complete splice

Deep skirt to accommodate multiple variations of wire combinations

UL and CSA rated up to 600 V. Metric versions available.

### Nylon Parallel Splices Type PSN

Maximum insulation temperature 221°F (105°C)

Only one crimp needed to complete splice

UL and CSA rated up to 300 V.

PANDUIT extensive line of tooling is specifically designed for optimum crimping performance.

See pages D1.83 – D1.88.

PANDUIT designs and manufactures a full line of labeling products, software, and printers to assist you with your labeling requirements.

See pages E1.1 – E2.30.

## Features and Benefits – PAN-TERM® Splices

### Nylon Butt Splices Type BSN

Internal wire stops assure proper insertion length

Maximum insulation temperature 221°F (105°C)

Brazed seam assures crimp reliability

UL and CSA rated up to 600 V.

### Vinyl Butt Splices Type BSV

Internal wire stops assure proper insertion, length

Maximum insulation temperature 221°F (105°C)

Expanded wire entry accommodates larger insulation

Brazed seam assures crimp reliability

UL and CSA rated up to 600 V.  
Flammability – UL 94V-0.  
Metric versions available.

### Non-Insulated Butt Splices Type BS

Internal wire stops assure proper insertion length

Brazed seam assures crimp reliability

Maximum recommended operating temperature 302°F (150°C)

Internally beveled barrel for quick easy wire insertion

UL and CSA rated up to 600 V.  
Metric versions available.

PANDUIT wiring duct offers a wide variety of sizes and types to meet the wire capacity needs and space constraints of the smallest wall mounted to the largest integrated systems.

See pages C1.1 – C1.52.

A comprehensive selection of cable ties used to bundle, mount, and identify wire and cable.

See pages B1.1 – B1.122.

## Part Number System for PAN-TERM® Splices

**BS**

Type

BS = Butt Splice  
PS = Parallel Splice

**V**

Insulation

N = Nylon  
V = Vinyl

**14**

Wire Range

22 = #26 – 22  
18 = #22 – 18  
14 = #16 – 14  
13 = #14 – 12  
10 = #12 – 10

**X**

Special Configuration

X = Expanded Insulation

**M**

Standard Package Size

X = 10  
Q = 25  
L = 50  
C = 100  
T = 200  
D = 500  
M = 1000

## Part Number System for PAN-TERM® Wire Joints

**JN**

Type

J = Non-Insulated  
JN = Nylon-Insulated

**418-212**

Wire Range

**J Types**  
214 – 312 = 2 #14 – 3 #12  
318 – 412 = 3 #14 – 4 #12  
216 – 410 = 2 #16 – 4 #10

**JN Types**  
224 – 318 = 2 #24 – 3 #18  
218 – 216 = 2 #18 – 2 #16  
418 – 212 = 4 #18 – 2 #12  
314 – 412 = 3 #14 – 4 #12

**C**

Standard Package Size

X = 10  
Q = 25  
L = 50  
C = 100  
T = 200  
D = 500  
M = 1000

## UL LISTED CERTIFIED **Butt Splice, Nylon Insulated**

### Type BSN

- Designed to splice two solid or stranded wires together to repair or lengthen wires
- Butted configuration provides low profile for limited space applications
- Brazed seam protects terminal barrel from splitting during the crimp process
- Internal wire stop assures proper length of insertion into terminal barrel
- UL Flammability UL 94V-2/HB, maximum insulation temperature 221°F (105°C)
- UL and CSA rated up to 600 V per UL 486

| Part Number     | Wire Range  | Color Code | Max. Ins. | Figure Dimensions (In.) | Recommended Installation Tool               | Std. Pkg. Qty.** | Std. Ctn. Qty. |
|-----------------|-------------|------------|-----------|-------------------------|---|------------------|----------------|
|                 |             |            |           | L                       |   |                  |                |
| <b>BSN22-C*</b> | 26 – 22 AWG | Yellow     | .080      | .79                     | CT-100, CT-1525, CT-2500                    | 100              | 1000           |
| <b>BSN18-C</b>  | 22 – 18 AWG | Red        | .115      | 1.15                    | CT-100, CT-600-A, CT-1550, CT-1551, CT-2500 | 100              | 1000           |

## Parallel Splice, Nylon Insulated

### Type PSN

- Designed to splice two solid or stranded wires together to repair or lengthen wires
- Parallel design results in only one crimp required to complete splice
- Seamless tubular barrel provides a consistent high performance quality crimp
- UL Flammability UL 94V-2/HB, maximum insulation temperature 221°F (105°C)
- UL and CSA rated up to 300 V

| Part Number    | Wire Range  | Color Code | Max. Ins. | Figure Dimensions (In.) | Wire Strip Length (In.) | Recommended Installation Tool | Std. Pkg. Qty.** | Std. Ctn. Qty. |

For crimping tool information, see pages D1.83, D1.84, and D1.88.

## Parallel Splice, Non-Insulated

### Type PS

- Designed to splice two solid or stranded wires together to repair or lengthen wires
- Parallel design results in only one crimp required to complete splice
- Seamless tubular barrel provides a consistent high performance quality crimp
- Maximum recommended operating temperature 302°F (150°C)
- Non-insulated barrel can be used to provide an economical termination when insulation is not required

\*\*To order in bulk, replace -C in the part number with -M for a bulk package of 1000 and replace -L with -D for a bulk package of 500.  
For crimping tool information, see page D1.83.

## Wire Joint, Nylon Insulated

### Type JN

- Large barrel, designed to accommodate from one to seven wires with just one crimp
- Accommodates multiple wire sizes in varying combinations
- Barrel of terminal internally beveled to provide quick and easy wire insertion
- UL and CSA rated up to 600 V per UL 486
- UL Flammability UL 94V-2/HB, maximum insulation temperature 221°F (105°C)

| Part Number         | Wire Range        | Color Code | CMA Range |       | Figure Dimensions (In.) | Wire Strip Length (In.) | Recommended Installation Tool         | Std. Pkg. Qty.** | Std. Ctn. Qty. |

\*Part number J216-410, is not UL Listed or CSA Certified.

\*\*To order in bulk, replace -T in the part number with -2M for a bulk package of 2000 and replace -L with -D for a bulk package of 500.

‡UL and CSA approved tooling/product combinations. For crimping tool information, see page D1.83.

## Heat Shrink, Butt Splices

Type BSH

- Designed to splice two solid or stranded wires together to repair or lengthen wires
- Butted configuration provides low profile for limited space applications
- Heat shrink polyolefin sleeve with hot melt adhesive protects against moisture
- After crimping, heat shrink insulation is completed with a standard heat gun
- Minimum continuous operating temperature -65°F (-55°C)
- Maximum continuous operation temperature 230°F (110°C)
- Shrink temperature 250°F (120°C)

| Part Number    | Wire Range  | Color Code | Max. Ins. | Figure Dimensions (In.) | Wire Strip Length (In.) | Recommended Installation Tool | Std. Pkg. Qty.** | Std. Ctn. Qty. |
|----------------|-------------|------------|-----------|-------------------------|-------------------------|-------------------------------|------------------|----------------|
|                |             |            |           | L                       |                         |                               |                  |                |

| <b>BSH14-Q</b> | 16 – 14 AWG | Blue       | .190      | 1.45                    | 5/16                    | CT-310                        | 25               | 125            |
| <b>BSH10-E</b> | 12 – 10 AWG | Yellow     | .240      | 1.64                    | 5/16                    | CT-310                        | 20               | 100            |

\*\*To order in bulk, replace -Q in the part number with -D for a bulk package of 500 and replace -E with -T for a bulk package of 200.

For crimping tool information, see page D1.85.

## Metric Butt Splice, Vinyl Insulated

Type BSMV

- Expanded wire entry designed to accommodate wire with a larger insulation thickness
- Designed to splice two solid or stranded wires together to repair or lengthen wires
- Brazed seam protects terminal barrel from splitting during the crimp process
- Internal wire stop assures proper length of insertion into terminal barrel

| Part Number                   | Wire Range (mm²) | Color Code | Max Ins. | Figure Dimensions (mm) | Recommended Installation Tool | Std. Pkg. Qty. | Std. Ctn. Qty. |
|-------------------------------|------------------|------------|----------|------------------------|-------------------------------|----------------|----------------|
|                               |                  |            |          | L                      |                               |                |                |
| <b>BSMV1BX-CY<sup>^</sup></b> | .5 – 1.5         | Red        | 4.3      | 26.4                   | CT-1551                       | 100            | 500            |

## PAN-TERM® FERRULES

PANDUIT® PAN-TERM® Ferrule end sleeves terminate stranded wire into terminal blocks with superior termination performance. A wide assortment of ferrule styles and tool designs provide a proven way to make reliable connections, especially for limited space applications. Insulation flare allows for ease of wire insertion and eliminates loose strands of wire. Encapsulated crimp contains loose wires to eliminate stray wire breakage.

- Ideal for control panel and terminal block applications
- Insulated single wire range of #26 – 1 AWG, sizes meets French and DIN color code standards
- Insulated twin wire end sleeve range of #22 – 10 AWG, sizes meets DIN color code standard
- Non-insulated wire range of #24 – 1 AWG
- Insulated ferrules single wire range #20 – 14 AWG, available in strips of 50 for use with the semiautomatic ferrule crimping tool, CT-1000, for improved reliability and productivity
- Wide assortment of controlled cycle, crimping tools for reliable connections at the lowest installed cost

PANDUIT continually provides new designs to meet the application challenges encountered by our customers. PANDUIT offers a wide assortment of PAN-TERM® termination products to meet customer needs at the lowest installed cost.

## Features and Benefits – PAN-TERM® Ferrules

PANDUIT ferrules are available for wiring applications from #26 – 1 AWG. Offerings include insulated and non-insulated ferrules, in single-wire or double-wire configurations. Insulated ferrules are color-coded to DIN or French standards. Crimped on the metal barrel these ferrules provide improved performance for terminal block and panel building applications.

## Insulated Ferrules – Single Wire DIN End Sleeve

### Type FSD

- Polypropylene insulation housing conforms to DIN color requirements
- Meets DIN standards for single wire containment
- Funnel entry for faster insertion and lower installed cost
- Designed with a seamless barrel to contain loose wire strands for superior terminations
- Eases insertion of wire into terminal block
- Suitable for limited space panel applications
- Multiple pin lengths available for a variety of terminal blocks

A. System Overview

## Insulated Ferrules – Single Wire French End Sleeve Type FSF

B1. Cable Ties

- Polypropylene insulation housing conforms to French color requirements
- Meets DIN standards for single wire containment
- Funnel entry for faster insertion and lower installed cost
- Eases insertion of wire into terminal block
- Suitable for limited space panel applications

B2. Cable Accessories

- Designed with a seamless barrel to contain loose wire strands for superior terminations

## Insulated Ferrules – Twin Wire DIN End Sleeve

### Type FTD

- Meets DIN standards for twin wire containment
- Polypropylene insulation housing conforms to DIN color requirements
- Funnel entry for faster insertion and lower installed cost
- Designed with a seamless barrel to contain loose wire strands for superior terminations

- Eases insertion of wire into terminal block
- Suitable for limited space panel applications
- Multiple pin lengths available for a variety of terminal blocks

## Insulated Ferrules on Strips – Single Wire

### Type FS

- Polypropylene insulation housing available in DIN standard colors in strips of 50
- Continuously molded design provides consistent placement of ferrules in tool to ensure fast, reliable terminations

- Available in #20 – 14 AWG featuring a seamless barrel design to contain loose wire strands for superior terminations
- Designed for use with the Semiautomatic Ferrule Crimping Tool CT-1000 for medium volume applications

| Part Number                           | Wire Size |      | Color Code | Max. Wire Insul. Dia. |     | Figure Dimensions |      |      |     |     |     | Wire Strip Length | Recommended Installation Tool | Std. Pkg. Qty. |     |

System  
Overview

## Ferrules, Non-Insulated

B1.  
Cable Ties

### Type F

B2.  
Cable  
Accessories

- Designed with a seamless barrel to contain loose wire strands for superior terminations
- Eases insertion of wire into terminal block

- Meets DIN standards for wire containment
- Suitable for limited space panel applications
- Multiple pin lengths available for a variety of terminal blocks

## TERMINAL CRIMPING TOOLS

PANDUIT offers a wide assortment of tools to provide solutions for installing terminals, disconnects, splices, ferrules and lugs. PANDUIT installation tools provide quality performance and ease of installation at the lowest installed cost. The long-term reliability of PANDUIT installation tools provides the highest level of service to meet customer requirements.

- Ergonomic design to minimize operator effort
- Features crimping tools with a controlled cycle mechanism ensuring repeat reliability in every crimp
- Superior locator ensures proper location of the terminal barrel or insulated disconnect in the crimp pocket
- Battery powered, hydraulic tools with fingertip operation are available to meet a variety of installation needs
- UL Listed and CSA Certified tooling/product combinations, as noted

PANDUIT terminal crimping tools are available in an assortment of styles to meet a variety of installation needs. The installer can control the crimp with the plier type hand operated crimping tool. Hand operated *CONTOUR CRIMP™* Controlled Cycle Crimping Tools feature ergonomically designed cushioned grips with low handle effort. PANDUIT terminal crimping tools are designed for use with PANDUIT terminals, providing the right solution for your termination needs.

A. System Overview

## Crimping Guidelines for PANDUIT® PAN-TERM® Terminals, Disconnects, Splices and Wire Joints

B1. Cable Ties

### 1. Select the proper PANDUIT terminal for the application and wire size used

- Ring terminals are used for high vibration and grounding applications
- Fork terminals are used for static (non-vibration) applications
- Disconnects are used for applications that require quick connection of wires without the use of tools
- Splices and wire joints are used to join wires together

B2. Cable Accessories

B3. Stainless Steel Ties

### 2. Strip wire to the proper length as specified on:

- PANDUIT product packaging label
- Packaging instructions included with the PANDUIT product
- Or if no packaging instructions are available, plan your strip length so that 1/32" of wire can be seen protruding through the tongue end of the terminal barrel

C1. Wiring Duct

C2. Surface Raceway

### 3. Select the proper crimp tool to be used

- Use crimping tools that provide a UL Listed and/or CSA Certified electrical termination, to assure a safe and reliable connection
- PANDUIT terminals are UL Listed and CSA Certified when crimped with PANDUIT plier type crimping tool or with the preferred **CONTOUR CRIMP™** Controlled Cycle Crimping Tool specified on the packaging label

C3. Abrasion Protection

C4. Cable Management

Plier Type Crimping Tool

CONTOUR CRIMP™ Controlled Cycle Crimping Tool

D1. Terminals

### 4. Select the proper crimp pocket for the terminals and wire size you are using

- PANDUIT crimping tools simplify this process with color-coded crimp pockets. The yellow, blue, and red pockets are specifically designed for the industry standard barrel sizes, each with a specific color code.

D2. Power Connectors

D3. Grounding Connectors

E1. Labeling Systems

### 5. Perform the electrical crimp for the plier type tool Insulated Terminals and Disconnects

- Locate terminal in appropriate size color-coded crimp die pocket with tool centered on insulation sleeve. (See Note 1, page D1.82)
- Rotate terminal so tongue is level with crimp die.
- Insert properly stripped wire into terminal until a minimum of 1/32" of wire extends beyond the terminal barrel.
- Squeeze tool handles firmly to perform the electrical crimp. (See Note 2, page D1.82)
- Provide second crimp on the flared portion of the insulation housing to close the insulation as shown. Caution: When using plier type crimping tools, do not squeeze as firmly as you did for the electrical crimp. (See Note 3, page D1.82)

## Crimping Guidelines for PANDUIT® PAN-TERM® Terminals, Disconnects, Splices and Wire Joints (continued)

### Non-Insulated Terminals and Disconnects

- Locate terminal in appropriate wire gauge crimp die pocket with indenter centered on barrel seam.
- Rotate terminal so tongue is level with crimp die.
- Insert properly stripped wire (based on recommendations on package label) into terminal until a minimum of 1/32" of wire extends beyond the terminal barrel.
- Squeeze tool handles firmly to perform the electrical crimp. (See Note 2, page D1.82)

Step A

Step B

Steps C and D

Complete Crimp

### Insulated and Non-Insulated Parallel Splices

- Locate parallel splice in appropriate wire gauge crimp die pocket and position tool on the center of the splice.
- Rotate terminal so tongue is level with crimp die.
- Insert properly stripped wire (based on recommendations on package label) into each end of the parallel splice.
- Squeeze tool handles firmly. (See Note 2, page D1.82)
- An insulation crimp is not required on an insulated parallel splice.

Steps A and B

Steps C and D

Complete Crimp

### Insulated and Non-Insulated Butt Splices

- Locate butt splice in appropriate color-coded crimp die pocket and position crimp halfway between the wire stop (center of splice) and the end of the insulation crimp area. (See Note 4, page D1.82)
- Insert properly stripped wire (based on recommendations on package label) into one end of butt splice.
- Squeeze tool handles firmly to perform the electrical crimp (See Note 2, page D1.82)
- Provide second crimp on the flared portion of the insulation housing to close the insulation. Caution: When using plier type crimping tools, do not squeeze as firmly as you did for the electrical crimp. (See Note 3, page D1.82)
- Repeat steps 1 – 4 for opposite end of butt splice. (See Note 3, page D1.82)

## Crimping Guidelines for **PANDUIT® PAN-TERM®** Terminals, Disconnects, Splices and Wire Joints (continued)

### Insulated and Non-Insulated Wire Joints

- Properly strip wires per manufacturer's recommendations on product package label.
- Twist stripped wire ends together and insert wires into wire joint.
- Locate wire joint in appropriate wire gauge crimp die pocket and position crimp in the center of the metal insert.
- Squeeze tool handles firmly to perform the electrical crimp. (See Note 2 below)

Note: An insulation crimp is not required on an insulated wire joint.

Steps A and B

Steps C and D

Complete Crimp

### NOTES for Crimping with the Preferred Hand Operated Controlled Cycle Crimping Tools:

- PANDUIT** controlled cycle crimping tools properly locate rings, forks, and barrel insulated disconnects, pins, and blades. No further positioning is required.
- When using the preferred controlled cycle tool, once a crimp has been started, the ratchet device of controlled cycle tools will not release until the crimp is complete, independent of operator expertise.
- Controlled cycle tools provide the electrical crimp and the insulation closure in a single cycle of the tool.
- When using controlled cycle tooling, insulated butt splices must be inserted from the back of the tool to ensure that the electrical and insulation closure crimp pockets are properly aligned with the splice.

### 5. Perform the electrical crimp using the preferred controlled cycle tool

- Make sure the terminal barrel is centered correctly in the right die pocket by using the product locator on the backside of the tool.
- Determine the correct die pocket to use based on the color code of the terminal.
- Squeeze the handles of the tool until one click is heard; this click indicates the terminal is now held in place securely to insert the wire.
- Insert the wire and complete cycle to perform the electrical and insulation crimp simultaneously.
- Crimp is complete.

Step A

Step B

Step C

Step D

Complete Crimp

### 6. Inspect the crimp

Note: If your crimp looks like any of the examples shown below, cut off the terminal and recrimp. These crimps would provide a poor connection!

| Part Number    | Part Description  | Std. Pkg. Qty. |
|----------------|---|----------------|
| <b>CT-1525</b> | Crimps <i>PANDUIT</i> #26 – 22 AWG insulated terminals and splices, #22 – 10 AWG fully insulated disconnects and insulated parallel splices. Crimps <i>PANDUIT</i> #22 – 14 AWG barrel insulated disconnects.   | 1              |
| <b>CT-1550</b> | Crimps most <i>PAN-TERM</i> ® #22 – 10 AWG nylon and vinyl insulated terminals, splices, and disconnects. The CT-1550 has the red/blue pocket closest to the pivot which provides a reduced crimp effort for those who make red/blue terminations.                      | 1              |
| <b>CT-1551</b> | Crimps most <i>PAN-TERM</i> ® #22 – 10 AWG nylon and vinyl insulated terminals, splices, and disconnects. The CT-1551 has the yellow pocket closest to the pivot which provides a reduced crimp effort for those who make yellow terminations.                          | 1              |
| <b>CT-1570</b> | Crimps most <i>PAN-TERM</i> ® #22 – 10 AWG and .5mm <sup>2</sup> – 6.0mm <sup>2</sup> non-insulated terminals and disconnects. Crimps <i>PANDUIT</i> #22 – 10 AWG and .5mm <sup>2</sup> – 6.0mm <sup>2</sup> non-insulated splices and #10 AWG compression lugs.        | 1              |
| <b>CT-1700</b> | Crimps <i>PANDUIT</i> #8 – 2 AWG non-insulated tubular terminals (S series), #8 – 1 AWG copper code conductor lugs and splices, #6 – 4 AWG dual rated aluminum lugs and splices and CTAPF10-16 to CTAPF3-12 copper taps. Includes 5-position, color-coded rotating die. | 1              |
| <b>CT-1701</b> | Crimps <i>PANDUIT</i> #10 – 2 AWG non-insulated large gauge ring terminals (P series) and #12 – 4 AWG non-insulated heavy duty ring terminals (P series). Includes 5-position rotating die.   | 1              |
| <b>CT-1014</b> | Crimps <i>PANDUIT</i> #22 – 14 AWG loose piece <i>DISCO-LOK</i> ™ Disconnects.  | 1              |
| <b>CT-1015</b> | Crimps <i>PANDUIT</i> #22 – 14 AWG loose piece <i>SUPRA-GRIP</i> ™ Disconnects.   | 1              |

For battery powered crimping tools, see compression connector tools selection guide on pages D3.30 – D3.32.

## Controlled Cycle Crimping Tools

- Specialty crimping tools for fully insulated right angle disconnects and heat shrink insulated terminals, disconnects, and splices
- Controlled cycle mechanism assures high quality, consistent terminations

| Part Number | Part Description  | Std. Pkg. Qty. |
|-------------|---|----------------|
| CT-300-1    | Crimps <i>PANDUIT</i> #22 – 14 AWG fully insulated right angle disconnects (DNFR-FIB series). | 1              |
| CT-310      | Crimps <i>PANDUIT</i> #22 – 10 AWG heat shrink insulated terminals, disconnects, and splices  | 1              |

## Controlled Cycle Crimping Tools – Ferrule End Sleeve

- Specifically designed for the installation of *PAN-TERM*® Ferrules
- Ergonomic tool design assures operator comfort, safety, and performance
- Controlled cycle mechanism assures high quality, consistent terminations
- Multi-position locator facilitates a high quality repeatable crimp

| Part Number | Part Description  | Std. Pkg. Qty. |
|-------------|---|----------------|
| CT-1002     | Crimps <i>PANDUIT</i> #26 – 10 AWG single polypropylene insulated ferrules (DIN). #26 – 10 AWG single wire insulated ferrules (French). #22 – 12 AWG polypropylene insulated dual-wire ferrules (DIN). #24 – 10 AWG non-insulated ferrules.       | 1              |
| CT-1003     | Crimps <i>PANDUIT</i> #22 – 8 AWG single wire insulated ferrules (DIN). #22 – 8 AWG single wire polypropylene insulated ferrules (French). #22 – 10 AWG polypropylene insulated dual-wire (DIN) ferrules. #22 – 10 AWG non-insulated ferrules.    | 1              |
| CT-1004     | Crimps <i>PANDUIT</i> #8 – 6 AWG single wire polypropylene insulated ferrule (DIN). #8 – 6 AWG single wire polypropylene insulated ferrules (French). #10 AWG polypropylene insulated dual-wire (DIN) ferrule. #8 – 6 AWG non-insulated ferrules. | 1              |
| CT-1005     | Crimps <i>PANDUIT</i> #4 – 2 AWG single wire polypropylene insulated ferrule (DIN). #4 – 2 AWG single wire polypropylene insulated ferrules (French). #4 – 2 AWG non-insulated ferrules.  | 1              |
| CT-1006     | Crimps <i>PANDUIT</i> #1 AWG single wire polypropylene insulated ferrule (DIN) and (French). #1 AWG non-insulated ferrules.   | 1              |
| CT-1104     | Controlled cycle square crimp profile tool for #8 – 6 AWG (10mm <sup>2</sup> – 16mm <sup>2</sup> ) insulated and non-insulated ferrules.  | 1              |
| CT-1123     | Controlled cycle square crimp profile tool for #26 – 8 AWG (.14mm <sup>2</sup> – 10mm <sup>2</sup> ) insulated and non-insulated ferrules.  | 1              |

A. System Overview

## Semiautomatic Ferrule Crimping Tool CT-1000

B1. Cable Ties

- Innovative rapid load design utilizes continuously molded ferrules to significantly reduce installation time
- Adjustable die setting allows termination of all *PANDUIT* #14 – 20 AWG continuously molded ferrules with a single tool
- Controlled cycle tool cuts, strips, and crimps wire to maximize efficiency

B2. Cable Accessories

B3. Stainless Steel Ties

| Part Number | Part Description  | Std. Pkg. Qty. |
|-------------|---|----------------|
| CT-1000     | Crimps <i>PANDUIT</i> #20 – 14 AWG continuously molded ferrules on strips. Also cuts and strips wire. | 1              |

C1. Wiring Duct

C2. Surface Raceway

## Controlled Cycle Crimping Tools – In-Line

- Military specialty tools help meet military and nuclear test requirements for Class 2 applications
- Calibration-recalibration is possible for maintaining exact crimp dimensions
- In-line crimp action for greater dielectric strength with uniform insulation compression

C3. Abrasion Protection

C4. Cable Management

| Part Number | Part Description  | Std. Pkg. Qty. |
|-------------|---|----------------|
| CT-400      | Crimps #22 – 14 <i>PANDUIT</i> insulated terminals, disconnects, and splices. Comes complete with tools for calibration. Has adjustable pre-load and emergency ratchet. Helps meet military and nuclear requirements. | 1              |
| CT-460      | Crimps #16 – 10 <i>PANDUIT</i> insulated terminals, disconnects, and splices. Has same features as CT-400 above.  | 1              |

For proper crimp head selection, see the tooling selection guide for *PANDUIT* terminals, splices, and disconnects on pages D1.89 – D1.91, in this catalog.

D1. Terminals

D2. Power Connectors

## Pneumatic Crimping Tool

- Quickly crimps a variety of loose piece terminals in a variety of wire sizes for medium volume production
- Portable — the small size, ease of bench mounting and quick pneumatic connection allow the tool to be moved from one work station to another or to the work itself
- Versatile interchangeable crimping heads let you switch terminal types quickly to meet changing production requirements; this tool, when used with only four crimp heads, can crimp a full range of #26 – 10 AWG insulated and non-insulated terminal products

D3. Grounding Connectors

E1. Labeling Systems

| Part Number | Part Description  | Std. Pkg. Qty. |
|-------------|---|----------------|
| CT-600-A    | Pneumatic tool, 6' air hose and carrying case. Does not include crimping heads (ordered separately).  | 1              |
| CT-500CH    | Crimping head for most #22 – 14 insulated terminals, splices, and disconnects.  | 1              |
| CT-520CH    | Crimping head for most #22 – 14 insulated butted seam disconnects and #26 – 22 insulated terminals.   | 1              |
| CT-550CH    | Crimping head for most #22 – 10 insulated terminals and splices.  | 1              |
| CT-570CH    | Crimping head for #22 – 10 non-insulated terminals, splices, and disconnects.   | 1              |
| PD-600-A    | Positioning device (for bench mounting of CT-600-A).  | 1              |
| FPC-600-A   | Foot actuator operating air pressure: 80 – 100 psi .233 SCFM type of air: lubricated. Recommend using Norgren (Brand) #FLR222-012-043008 filter lubricator regulator. | 1              |
| K600-A      | Update kit for foot pedal control and positioning device to work with new CT-600-A pneumatic crimping tool.   | 1              |

For proper crimp head selection, see the tooling selection guide for *PANDUIT* terminals, splices, and disconnects on pages D1.89 – D1.91, in this catalog.

## CD-720 Crimping Dies

- Color-coded for easy matching to color-coding marked on connectors
- Embosses die index number on connector barrels to provide post crimp inspection except CD-720PV8-2
- Part number permanently marked on crimping die for easy identification
- Provides 5-sided crimp results in terminations with premium electrical and mechanical performance

| <b>Crimping Tools</b> |   |                |
| <b>CT-2500</b>        | Crimps <i>PANDUIT</i> #22 – 10 AWG insulated and non-insulated terminals, disconnects and splices. Includes tool, two batteries, a battery charger and carrying case. Crimp heads not included. Meets U.S. voltage requirements.      | 1              |
| <b>CT-2500/E</b>      | Crimps <i>PANDUIT</i> #22 – 10 AWG insulated and non-insulated terminals, disconnects, and splices. Includes tool, two batteries, a battery charger and carrying case. Crimp heads not included. Meets European voltage requirements. | 1              |
| <b>Accessories</b>    |   |                |
| <b>CT-2500CHR</b>     | U.S. compatible battery charger for use with the CT-2500.   | 1              |
| <b>CT-2500CHR/E</b>   | European compatible battery charger for use with the CT-2500/E.   | 1              |
| <b>CT-2500BC</b>      | Rechargeable tool battery for use with the CT-2500.   | 1              |
| <b>CT-2500CASE</b>    | Carrying case holds CT-2500 and accessories.  | 1              |
| <b>Crimp Heads</b>    |   |                |
| <b>CT-2550CH</b>      | Crimps <i>PANDUIT</i> #22 – 10 AWG insulated terminals, disconnects, and splices.   | 1              |
| <b>CT-2525CH</b>      | Crimps <i>PANDUIT</i> #22 – 10 AWG fully insulated disconnects and insulated parallel splices.  | 1              |
| <b>CT-2570CH</b>      | Crimps <i>PANDUIT</i> #22 – 10 AWG non-insulated terminals, disconnects, and splices.   | 1              |

## Tooling Selection Guide for PANDUIT Terminals, Splices, and Disconnects

\*Pull-out force of the crimped disconnect.

Applicable **PAN-TERM®** products meet or exceed the following test specifications:

- UL 486A (Terminals)
- UL 486C (Splices)
- UL 310 (Blade Adapters)
- CSA C22.2 No. 65 (all designs)

UL and CSA approved products are shown with the applicable logos in the product section. UL file #E52164, CSA File #LR31212.

Applicable **PAN-TERM®** products meet or exceed the following test specifications:

- UL 310 (Disconnects)
- CSA C22.2 No. 153 (all designs)

UL and CSA Listed products are shown with the applicable logos in the product section. UL file #E78522 and CSA file #LR31212.

\*Strandings required for UL and CSA certification testing.

This chart details the different conductors commonly used in the industry. For each size, either AWG or metric, various stranding options are listed. Typically the higher stranding is used in applications requiring greater conductor flexibility.

| AWG to Metric Wire Crosses |                           |
|----------------------------|---------------------------|
| AWG                        | Metric (mm <sup>2</sup> ) |
| <b>26 – 22</b>             | <b>0.1 – 0.5</b>          |
| <b>22 – 18</b>             | <b>0.5 – 1.0</b>          |
| <b>16 – 14</b>             | <b>1.5 – 2.5</b>          |
| <b>12 – 10</b>             | <b>4.0 – 6.0</b>          |

## Common Conductor Sizes and Strandings Reference Chart (continued)

| Conductor |                        | Individual Strands |          |        | Overall Conductor Size |       |        | Conductor  |           | Individual Strands |          |        | Overall Conductor Size |       |              |
|-----------|------------------------|--------------------|----------|--------|------------------------|-------|--------|------------|-----------|--------------------|----------|--------|------------------------|-------|--------------|

This chart details the different conductors commonly used in the industry. For each size, either AWG or metric, various stranding options are listed. Typically the higher stranding is used in applications requiring greater conductor flexibility.

| AWG to Metric Wire Crosses |                           |
|----------------------------|---------------------------|
| AWG                        | Metric (mm <sup>2</sup> ) |
| 26 – 22                    | 0.1 – 0.5                 |
| 22 – 18                    | 0.5 – 1.0                 |
| 16 – 14                    | 1.5 – 2.5                 |
| 12 – 10                    | 4.0 – 6.0                 |

## NOTES

## REEL SMART™ SYSTEM

The PANDUIT® REEL SMART™ System provides the best solution for quality, high volume terminations designed to dramatically reduce set-up time and production downtime. This increased efficiency translates into real cost savings throughout the termination process from start to finish.

**NEW!**

- One applicator system terminates over 400 continuously molded terminals, reducing cost of ownership
- Continuously molded integrated carrier guarantees alignment of terminal; front-to-back and side-to-side to eliminate skewing of product resulting in consistent, high quality low cost termination
- Available in large reels requiring less product changeover, resulting in less downtime
- Applicable sizes are UL Listed and CSA Certified, as noted
- PANDUIT® CA9 EZAIR™ Universal Applicator works with REEL SMART™ reel-fed terminals to deliver the ultimate fully automatic, high-capacity termination performance
- New PANDUIT reel and strip ferrules combine with tooling options to support wire harness, control panel, and automatic wire processing applications

PANDUIT continually provides new designs with innovative features to meet the application challenges encountered by customers, while providing the lowest installed cost.

A. System Overview

## Features and Benefits – REEL SMART™ Termination System

The PANDUIT continuously molded REEL SMART™ products are designed such that the terminal, disconnect, and butt splice housings are connected by an integral molded carrier in the barrel crimp zone, producing a continuous length of product. Plated metal terminals, disconnects, and splices are then assembled into the housings. During termination, the continuously molded components are fed into a universal applicator. This process produces a reel-fed solution that eliminates a variety of problems associated with other reel-fed designs and provides high quality, high capacity product on reels for longer, uninterrupted production runs – resulting in the lowest installed cost.

F. Index

Pre-insulated design eliminates the need for post-insulation – resulting in labor savings

Continuously molded design always aligns product with the carrier strip – resulting in trouble free tool operation

Plastic carrier strip eliminates sharp, unplated edges as found on metal strip-fed carriers – providing better corrosion resistance

## REEL SMART™ CA9 EZAIR™ Universal Applicator

The PANDUIT® CA9 EZAIR™ applicator automatically adjusts feed stroke to the correct pitch and length for the entire product line of continuously molded products. The need for multiple applicators is eliminated. The applicator, in conjunction with the precision, continuously molded product provides perfect front-to-back and side-to-side alignment in the die pocket for a high quality termination every time – resulting in the most optimum system to terminate terminals.

Automatic, self-adjusting feed stroke – resulting in correct pitch and length

Universal applicator installs entire REEL SMART™ product line – resulting in lower tooling inventory costs

Versatile applicator design – allows for use in bench presses, and most automatic wire processing systems

Quick change dies – provide fast product change-over and reduction in set-up time

## Nylon Insulated Terminals with Insulation Grip Sleeve (Funnel and Non-Funnel Entry Types)

The three-piece design terminal provides a permanently attached tin-plated brass sleeve for insulation grip in funnel and straight entry sleeve designs. This product feature offers the highest quality reliable terminations. Nylon insulation is rated up to 600 V maximum and designed for up to 221°F (105°C) operating temperature maximum. Supplied on rings, forks, locking forks, short locking forks and flanged forks in wire sizes #22 – 10.

- Sleeved barrel – assures crimp reliability
- PNF – funnel-entry styles available
- Metal insulation crimp – provides DOUBLE CRIMP wire insulation grip sleeve for high vibration or conductor strain environments

- Internal wire barrel serrations – assure good wired contact and maximum tensile strength
- Product markings – UL and CSA rated – up to 600 V, maximum operating temperature 221°F(105°C )

### UL LISTED SP® Ring Terminals, Nylon Insulated – Non-Funnel Entry

#### Type PN-R

- Continuously molded design provides reliable, consistent performance through the applicator for a high quality termination every time
- Ring tongue design assures a secure connection in high vibration applications
- Metal insulation grip sleeve crimps to wire insulation, providing protection to the crimp joint during high vibration applications
- Internal barrel serrations assure good wire contact and maximum tensile strength
- UL Flammability UL 94V-2/HB, maximum insulation temperature 221°F (105°C)
- UL and CSA rated up to 600 V per UL 486

System  
Overview

## Ring Terminals, Nylon Insulated – Funnel Entry

B1.  
Cable Ties

### Type PNF-R

- Continuously molded design provides reliable, consistent performance through the applicator for a high quality termination every time
- Ring tongue design assures a secure connection in high vibration applications
- Metal insulation grip sleeve crimps to wire insulation, providing protection to the crimp joint during high vibration applications

- Internal barrel serrations assure good wire contact and maximum tensile strength
- UL Flammability UL 94V-2/HB, maximum insulation temperature 221°F (105°C)
- UL and CSA rated up to 600 V per UL 486

## UL LISTED CERTIFIED Multiple Stud Ring Terminals, Vinyl Insulated – Funnel Entry

### Type PV-610RB

- Continuously molded design provides reliable, consistent performance through the applicator for a high quality termination every time
- Teardrop shaped mounting hole of multiple stud terminals permits use with #6, #8, or #10 size studs
- Ring tongue design assures a secure connection in high vibration applications

- Insulation support helps to prevent wire damage in bending applications
- Maximum insulation temperature 221°F (105°C)
- UL and CSA rated up to 600 V per UL 486

A. System Overview

## Ring Terminals, Nylon Insulated – Heavy Duty

### Type PN-HDR

- Continuously molded design provides reliable, consistent performance through the applicator for a high quality termination every time
- Manufactured from stock 56% thicker than a standard #16 – 14 AWG terminal for use in heavy duty applications
- Insulation housing is marked with “HDR” to signify heavy duty ring
- Metal insulation grip sleeve crimps to wire insulation, providing protection to the crimp joint during high vibration applications
- Internal barrel serrations assure good wire contact and maximum tensile strength
- UL Flammability UL 94V-2/HB, maximum insulation temperature 221°F (105°C)
- UL and CSA rated up to 600 V per UL 486

## Fork Terminals, Nylon Insulated – Non-Funnel Entry

### Type PN-F

- Continuously molded design provides reliable, consistent performance through the applicator for a high quality termination every time
- Fork design provides for fast and easy installation, without the need to remove fastener
- Metal insulation grip sleeve crimps to wire insulation, providing protection to the crimp joint during high vibration applications
- Internal barrel serrations assure good wire contact and maximum tensile strength
- UL Flammability UL 94V-2/HB, maximum insulation temperature 221°F (105°C)
- UL and CSA rated up to 600 V per UL 486

A. System Overview

## Locking Fork Terminals, Nylon Insulated – Non-Funnel Entry

### Type PN-LF

- Continuously molded design provides reliable, consistent performance through the applicator for a high quality termination every time
- Lock in place for secure connection
- Fork design provides for fast and easy installation, without the need to remove fastener
- Metal insulation grip sleeve crimps to wire insulation, providing protection to the crimp joint during high vibration applications
- Internal barrel serrations assure good wire contact and maximum tensile strength
- UL Flammability UL 94V-2/HB, maximum insulation temperature 221°F (105°C)
- UL and CSA rated up to 600 V per UL 486

## Locking Fork Terminals, Vinyl Insulated – Funnel Entry

### Type PV-LFB

- Continuously molded design provides reliable, consistent performance through the applicator for a high quality termination every time
- Lock in place for secure connection
- Fork design provides for fast and easy installation, without the need to remove fastener
- Insulation support helps to prevent wire damage in bending applications
- Maximum insulation temperature 221°F (105°C)
- UL and CSA rated to 600 V per UL 486

A. System Overview

## Short Locking Fork Terminals, Nylon Insulated – Non-Funnel Entry

### Type PN-SLF

- Continuously molded design provides reliable, consistent performance through the applicator for a high quality termination every time
- Lock in place for a secure connection in limited spaces
- Fork design provides for fast and easy installation, without the need to remove fastener
- Metal insulation grip sleeve crimps to wire insulation, providing protection to the crimp joint during high vibration applications

- Internal barrel serrations assure good wire contact and maximum tensile strength
- UL Flammability UL 94V-2/HB, maximum insulation temperature 221°F (105°C)
- UL and CSA rated up to 600 V per UL 486

## Flanged Fork Terminals, Nylon Insulated – Non-Funnel Entry

### Type PN-FF

- Continuously molded design provides reliable, consistent performance through the applicator for a high quality termination every time
- Flange design provides extra secure connection on a variety of applications
- Metal insulation grip sleeve crimps to wire insulation, providing protection to the crimp joint during high vibration applications

- Internal barrel serrations assure good wire contact and maximum tensile strength
- UL Flammability UL 94V-2/HB, maximum insulation temperature 221°F (105°C)
- UL and CSA rated up to 600 V per UL 486

For applicator information, see page D1.143.

## Metric Ring Terminals, Nylon Insulated – Funnel Entry

### Type PMNF-R

- Continuously molded design provides reliable, consistent performance through the applicator for a high quality termination every time
- Ring tongue design assures a secure connection in high vibration applications
- Metal insulation grip sleeve crimps to wire insulation, providing protection to the crimp joint during high vibration applications
- Internal barrel serrations assure good wire contact and maximum tensile strength

Cable Ties

### Type PMV-RB

- Continuously molded design provides reliable, consistent performance through the applicator for a high quality termination every time
- Insulation support helps to prevent wire damage in bending applications
- Ring tongue design assures a secure connection in high vibration applications
- Maximum insulation temperature 221°F (105°C)

## Metric Fork Terminals, Nylon Insulated – Non-Funnel Entry

### Type PMN-F

- Continuously molded design provides reliable, consistent performance through the applicator for a high quality termination every time
- Fork design provides for fast and easy installation, without the need to remove fastener

- Metal insulation grip sleeve crimps to wire insulation, providing protection to the crimp joint during high vibration applications
- Internal barrel serrations assure good wire contact and maximum tensile strength

For applicator information, see page D1.143.

## Features and Benefits – REEL SMART™ Disconnects

### SUPRA-GRIP™ Nylon Fully Insulated Funnel Entry, Female Receptacle Type DNG-FB

Available in tab sizes to accommodate .187" or .250" tabs

Fully insulated design provides protection from electrical shorts

Maximum insulation temperature 221°F (105°C)

Fully integrated metal insulation grip for high vibration, high strain relief, and double crimp requirements

Continuously molded design provides reliable, consistent performance through applicator

Funnel entry for faster wire insertion and lower installed cost

UL and CSA Rated up to 600 V per UL 310.

### DISCO-LOK™ Nylon Fully Insulated, Funnel Entry, Female Receptacle Type DNG-FL

Available in tab sizes to accommodate .250" tabs

Unique locking mechanism allows for low insertion (mating) and positive locking for secure connections

Maximum insulation temperature 221°F (105°C)

Continuously molded design provides reliable, consistent performance through applicator

Insulation grip sleeve provides a superior insulation crimp for high vibration and high strain relief applications

Funnel entry for faster wire insertion and lower installed cost

UL and CSA rated up to 300 V.

### Standard and Premium Nylon Fully Insulated, Funnel Entry, Females Receptacles and Male Tabs Type DNF and DPF

Available in tab sizes to accommodate .110", .187", .205" or .250" tabs

Fully insulated design provides protection from electrical shorts

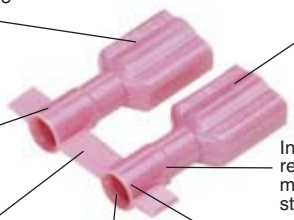

Maximum insulation temperature 257°F (125°C)

Insulation support restricts excessive wire movement to minimize stress on crimp joint

Continuously molded design provides reliable, consistent performance through applicator

Expanded wire entry (on select sizes) accommodates large insulation or multiple wires

Funnel entry for faster wire insertion and lower installed cost

UL and CSA Rated up to 600 V per UL 310.

### Vinyl Barrel Insulated Funnel Entry, Female Receptacles and Male Tabs Type DV

Available in tab sizes to accommodate .187", .205", or .250" tabs

Continuously molded design provides reliable, consistent performance through applicator

Insulation grip sleeve provides a superior insulation crimp for high vibration and high strain relief applications

Insulation support to protect electrical crimp

UL and CSA Rated up to 600 V.

High speed electric presses provide for fast terminations. See page D1.144.

Fully Automatic Cable Tie Installation Systems offer an efficient solution for high volume harnessing, assembly, fastening and packaging applications. See pages B1.113 – B1.120.

## SUPRA-GRIP™ Female Disconnects, Nylon Fully Insulated – Funnel Entry

### Type DNG-FB

- Continuously molded design provides reliable, consistent performance through the applicator for a high quality termination every time
- Disconnect can be inserted and removed from the male tab without the use of tools for lower installed cost
- Flared barrel extension integrated into stamping to provide insulation grip for double crimp requirements
- Internal barrel serrations assure good wire contact and maximum tensile strength
- Internal wire stop assures proper length of insertion into terminal barrel, providing a higher quality connection
- Mates with DNF-FIMB family

\*UL Recognized for copper alloy tabs only.  
For applicator information, see page D1.143.

## Disco-Lok™ Female Disconnects, Nylon Fully Insulated – Funnel Entry

### Type DNG-FL

- Continuously molded design provides reliable, consistent performance through the applicator for a high quality termination every time
- Disconnect can be inserted and removed from the male tab without the use of tools for lower installed cost
- Unique locking mechanism design allows for low insertion forces (mating) and positive lock for high vibration applications where a secure connection is mandatory

- Fully insulated design provides protection from electrical shorts
- Flared barrel extension integrated into stamping to provide insulation grip for double crimp requirements
- Insulation housing moves back and forth to engage and disengage locking mechanism for repeated use
- Specialty tool required to install this disconnect (CT-1014)
- Mates with DNF-FIMB family

## Female Disconnects, Nylon Fully Insulated – Funnel Entry

### Type DNF-FIB

- Continuously molded design provides reliable, consistent performance through the applicator for a high quality termination every time
- Disconnect can be inserted and removed from the male tab without the use of tools for lower installed cost
- Fully insulated design provides protection from electrical shorts

- Disconnects available in common industry tab sizes
- Internal wire stop assures proper length of insertion into terminal barrel, providing a higher quality connection
- UL and CSA rated up to 600 V per UL 310

| Part Number              | Wire Range  | Color Code | Max. Ins.   | Figure Dimensions (In.) |      |     | Tab Size         |              | CA9 Series Crimp Die | CA-800 Series Crimp Die | Pieces Per Reel |

## Disco™ Female Disconnects, Nylon Fully Insulated – Expanded Wire Entry

### Type DNF-FIBX

- Continuously molded design provides reliable, consistent performance through the applicator for a high quality termination every time
- Expanded wire entry designed to accommodate wire with a larger insulation thickness
- Disconnect can be inserted and removed from the male tab without the use of tools for lower installed cost

- Fully insulated design provides protection from electrical shorts
- Disconnects available in common industry tab sizes
- Internal wire stop assures proper length of insertion into terminal barrel, providing a higher quality connection
- UL and CSA rated up to 600 V per UL 310

## Disco™ Female Disconnects, Vinyl Barrel Insulated – Funnel Entry

### Type DV-B

- Continuously molded design provides reliable, consistent performance through the applicator for a high quality termination every time
- Disconnect can be inserted and removed from the male tab without the use of tools for lower installed cost
- Metal insulation grip sleeve crimps to wire insulation, providing protection to the crimp joint during high vibration applications
- Internal barrel serrations assure good wire contact and maximum tensile strength
- Internal wire stop assures proper length of insertion into terminal barrel, providing a higher quality connection
- UL Flammability UL 94V-0, maximum insulation temperature 221°F (105°C)

## DISCOGRIP™ Female Disconnects, Fully Insulated

B1. Cable Ties

### Type DPF-FIB

- Continuously molded design provides reliable, consistent performance through the applicator for a high quality termination every time
- Disconnect can be inserted and removed from the male tab without the use of tools for lower installed cost
- Premium nylon insulation retains its shape when crimped and provides a tight grip around the wire insulation for maximum strain relief
- Fully insulated design provides protection from electrical shorts
- Internal wire stop assures proper length of insertion into terminal barrel, providing a higher quality connection
- Disconnects available in common industry tab sizes
- UL and CSA rated up to 600 V per UL 310

## UL LISTED CERTIFIED DISCOGRIP™ Male Disconnects, Fully Insulated

### Type DPF-FIM

- Continuously molded design provides reliable, consistent performance through the applicator for a high quality termination every time
- Disconnect can be inserted and removed from the male tab without the use of tools for lower installed cost
- Fully insulated design provides protection from electrical shorts
- Premium nylon insulation retains its shape when crimped and provides a tight grip around the wire insulation for maximum strain relief

Cross section of DISCOGRIP™ Crimp showing insulation crimp of the wire insulation.

- Oversized housing designed for maximum versatility to mate with most commercially available fully insulated female disconnects
- Internal wire stop assures proper length of insertion into terminal barrel, providing a higher quality connection
- UL and CSA rated up to 600 V per UL 310

## Disco™ Male Disconnects, Nylon Fully Insulated – Expanded Wire Entry

### Type DNF-FIMX

- Continuously molded design provides reliable, consistent performance through the applicator for a high quality termination every time
- Expanded wire entry designed to accommodate wire with a larger insulation thickness
- Male tab couples with (all .250 x .032) female disconnects
- Fully insulated design provides protection from electrical shorts

- Male tab can be inserted and removed from the female disconnect without the use of tools for lower installed cost
- Internal barrel serrations assure good wire contact and maximum tensile strength

## Disco™ Male Disconnects, Nylon Barrel Insulated – Funnel Entry

### Type DNF-M

- Continuously molded design provides reliable, consistent performance through the applicator for a high quality termination every time
- Male tab couples with (all .250 x .032) female disconnects
- Male tab can be inserted and removed from the female disconnect without the use of tools for lower installed cost
- Metal insulation grip sleeve crimps to wire insulation, providing protection to the crimp joint during high vibration applications
- Internal barrel serrations assure good wire contact and maximum tensile strength
- Maximum insulation temperature 221°F (105°C)

## Disco™ Male Disconnects, Vinyl Barrel Insulated – Funnel Entry

### Type DV-MB

- Continuously molded design provides reliable, consistent performance through the applicator for a high quality termination every time
- Male tab couples with (all .250 x .032) female disconnects
- Insulation support helps to prevent wire damage in bending applications
- Male tab can be inserted and removed from the female disconnect without the use of tools for lower installed cost
- UL and CSA rated up to 600 V per UL 310

## Pin Terminals, Vinyl Insulated – Funnel Entry

### Type PV-PB

B1. Cable Ties

- Continuously molded design provides reliable, consistent performance through the applicator for a high quality termination every time
- Solid pin designed to prevent damage to the wire from over tightening, resulting in a reliable electrical connection

B2. Cable Accessories

B3. Stainless Steel Ties

- For use with pin-type terminal blocks
- Insulation support helps to prevent wire damage in bending applications
- UL rated up to 600 V per UL 486

C1. Wiring Duct

| Part Number         | Wire Range  | Color Code | Max. Ins. | Figure Dimensions (In.) |     |     | CA9 Series Crimp Die | CA-800 Series Crimp Die | Pieces Per Reel |

For applicator information, see page D1.143.

C2. Surface Raceway

## Male Blade Adapters, Vinyl Insulated – Funnel Entry

### Type DV-MB

C3. Abrasion Protection

- Continuously molded design provides reliable, consistent performance through the applicator for a high quality termination every time
- Flat blade design to prevent damage to the wire from over tightening, resulting in a reliable electrical connection

C4. Cable Management

- For use with blade-type terminal blocks
- Insulation support helps to prevent wire damage in bending applications
- Brazed seam protects terminal barrel from splitting during the crimp process

D1. Terminals

| Part Number          | Wire Range  | Color Code | Max. Ins. | Figure Dimensions (In.) |     | Tab Size (In.) | CA9 Series Crimp Die | CA-800 Series Crimp Die | Pieces Per Reel |

For applicator information, see page D1.143.

D2. Power Connectors

D3. Grounding Connectors

## UL LISTED SP CERTIFIED But Splices Nylon Insulated and Premium Grade Nylon

### Type BSN, BSP

E1. Labeling Systems

- Continuously molded design provides reliable, consistent performance through the applicator for a high quality termination every time
- Designed to splice two solid or stranded wires together to repair or lengthen wires
- Butted configuration provides low profile for limited space applications

E2. Labels

E3. Pre-Printed & Write-On Markers

E4. Permanent Identification

- Brazed seam protects terminal barrel from splitting during the crimp process
- Internal wire stop assures proper length of insertion into terminal barrel
- Premium grade nylon insulation available for applications requiring a tighter grip around the wire insulation for maximum strain relief

E5. Lockout/Tagout & Safety Solutions

| Part Number     | Wire Range  | Color Code | Max. Ins. | Figure Dimensions (In.) | CA9 Series Crimp Die | CA-800 Series Crimp Die | Pieces Per Reel |

## Features and Benefits – REEL SMART™ Metric Disconnects

### Metric SUPRA-GRIP™ Nylon Fully Insulated Female Disconnects Type DMNG-FB

Rated at 600 V.

### Metric DISCO-LOK™ Nylon Fully Insulated, Funnel Entry, Female Receptacle Type DMNG-FL

UL and CSA rated up to 300 V.

### Metric Standard and Premium Nylon Fully Insulated, Funnel Entry, Female Receptacles and Male Tabs Type DMNF and DMPF

Rated at 600 V.

### Metric Vinyl Barrel Insulated Funnel Entry, Female Receptacles and Male Tabs Type DMV

Rated at 600 V.

**NEW!**  **Metric SUPRA-GRIP™ Female Disconnects, Nylon Fully Insulated – Funnel Entry**

### Type DMNG-FB

- Continuously molded design provides reliable, consistent performance through the applicator for a high quality termination every time
- Disconnect can be inserted and removed from the male tab without the use of tools for lower installed cost
- Flared barrel extension integrated into stamping to provide insulation grip for double crimp requirements
- Internal barrel serrations assure good wire contact and maximum tensile strength
- Internal wire stop assures proper length of insertion into terminal barrel, providing a higher quality connection
- Mates with DNF-FIMB family

\*For #14 AWG wire applications, part to be used with copper alloy tabs only and is UL Recognized. For applicator information, see page D1.143.

## **® Metric Disco-Lok™ Female Disconnects, Nylon Fully Insulated – Funnel Entry**

### Type DMNG-FL

- Continuously molded design provides reliable, consistent performance through the applicator for a high quality termination every time
- Disconnect can be inserted and removed from the male tab without the use of tools for lower installed cost
- Unique locking mechanism design allows for low insertion forces (mating) and positive lock for high vibration applications where a secure connection is mandatory

- Fully insulated design provides protection from electrical shorts
- Flared barrel extension integrated into stamping to provide insulation grip for double crimp requirements
- Insulation housing moves back and forth to engage and disengage locking mechanism for repeated use
- Specialty tool required to install this disconnect (CT-1014)
- Mates with DNF-FIMB family

| Part Number   | Wire Range (mm <sup>2</sup> ) | Color Code | Max. Ins. | Figure Dimensions (mm) |     |     | Tab Size (mm) | CA9 Series Crimp Die | CA-800 Series Crimp Die | Pieces Per Reel |

## **® Metric Female Disconnects, Nylon Fully Insulated – Funnel Entry**

### Type DMNF-FIB

- Continuously molded design provides reliable, consistent performance through the applicator for a high quality termination every time
- Disconnect can be inserted and removed from the male tab without the use of tools for lower installed cost

- Fully insulated design provides protection from electrical shorts
- Disconnects available in common industry tab sizes
- Internal wire stop assures proper length of insertion into terminal barrel, providing a higher quality connection

| Part Number      | Wire Range (mm <sup>2</sup> ) | Color Code | Max. Ins. | Figure Dimensions (mm) |      |      | Tab Size (mm) | CA9 Series Crimp Die | CA-800 Series Crimp Die | Pieces Per Reel |          |

A. System Overview

## Metric Disco™ Female Disconnects, Nylon Fully Insulated – Expanded Wire Entry

B1. Cable Ties

### Type DMNF-FIBX

- Continuously molded design provides reliable, consistent performance through the applicator for a high quality termination every time
- Expanded wire entry designed to accommodate wire with a larger insulation thickness
- Disconnect can be inserted and removed from the male tab without the use of tools for lower installed cost
- Fully insulated design provides protection from electrical shorts
- Disconnects available in common industry tab sizes
- Internal wire stop assures proper length of insertion into terminal barrel, providing a higher quality connection

## Metric *Disco*™ Female Disconnects, Vinyl Barrel Insulated – Funnel Entry

### Type DMV-B

- Continuously molded design provides reliable, consistent performance through the applicator for a high quality termination every time
- Disconnect can be inserted and removed from the male tab without the use of tools for lower installed cost
- Metal insulation grip sleeve crimps to wire insulation, providing protection to the crimp joint during high vibration applications
- Internal barrel serrations assure good wire contact and maximum tensile strength
- Internal wire stop assures proper length of insertion into terminal barrel, providing a higher quality connection

## Metric *DiscoGRIP*™ Female Disconnects, Fully Insulated – Funnel Entry

### Type DMPF-FIB

- Continuously molded design provides reliable, consistent performance through the applicator for a high quality termination every time
- Disconnect can be inserted and removed from the male tab without the use of tools for lower installed cost
- Premium nylon insulation retains its shape when crimped and provides a tight grip around the wire insulation for maximum strain relief
- Fully insulated design provides protection from electrical shorts
- Internal wire stop assures proper length of insertion into terminal barrel, providing a higher quality connection
- Disconnects available in common industry tab sizes

A. System Overview

## Metric *DISCOGRIP*™ Male Disconnects, Fully Insulated – Funnel Entry

B1. Cable Ties

### Type DMPF-FIM

- Continuously molded design provides reliable, consistent performance through the applicator for a high quality termination every time
- Disconnect can be inserted and removed from the male tab without the use of tools for lower installed cost
- Fully insulated design provides protection from electrical shorts
- Premium nylon insulation retains its shape when crimped and provides a tight grip around the wire insulation for maximum strain relief

- Oversized housing designed for maximum versatility to mate with most commercially available fully insulated female disconnects
- Internal wire stop assures proper length of insertion into terminal barrel, providing a higher quality connection

## Metric Butt Splices, Nylon Insulated

### Type BSMN, BSMP

- One-side machine applied termination replaces manual crimping
- Funnel entry on machine termination side to increase productivity
- Also hand crimped with *PANDUIT* CT-100, CT-1550, or CT-1551 crimping tools
- Barrel locating ribs provide for accurate hand tool placement
- Available with insulation crimp premium grade nylon
- Brazed seam with center wire stop for increased performance and productivity

## Features and Benefits – REEL SMART™ Ferrules

B1.  
Cable Ties

PANDUIT ferrules are available in strips and reels for wiring applications from #20 – 14 AWG. Offerings include insulated ferrules in single wire configurations. These insulated ferrules are color-coded to DIN standards.

## Insulated Ferrules on Strips – Single Wire

### Type FS

- Polypropylene insulation housing available in DIN standard colors in strips of 50
- Continuously molded design provides consistent placement of ferrules in tool to ensure fast, reliable terminations

- Available in #20 – 14 AWG featuring a seamless barrel design to contain loose wire strands for superior terminations
- Designed for use with the Semiautomatic Ferrule Crimping Tool CT-1000 for medium volume applications

## REEL SMART™ Ferrule Applicator – CA10

- Designed for use with continuously molded ferrules in reels of 3,000 or 5,000 for high volume applications
- Precision ferrule indexing through applicator for optimum reliability and productivity
- Universal base plate allows compatibility with the *PANDUIT* CP-871 electric press, and other commercially available bench presses and automatic wire processing (AWP) machines

- Quick change die sets terminate the entire ferrule line to provide fast product change over and reduction in setup time; dies sold separately

| Part Number | Part Description   | Std. Pkg. Qty. |
|-------------|--|----------------|
| CA10        | Applicator used to terminate entire line of <i>REEL SMART™</i> Continuously Molded Ferrules on reels. For use with CP-871 Electric Press and CD10 series die sets. | 1              |
| CD10-1      | Die insert to be used with the CA10 applicator to terminate FS75, FSD75, FS76 and FSD76 <i>REEL SMART™</i> Continuously Molded Ferrules.                           | 1              |
| CD10-2      | Die insert to be used with the CA10 applicator to terminate FS77, FSD77, FS78 and FSD78 <i>REEL SMART™</i> Continuously Molded Ferrules.                           | 1              |
| CD10-3      | Die insert to be used with the CA10 applicator to terminate FS80 and FSD80 <i>REEL SMART™</i> Continuously Molded Ferrules.  | 1              |

## CA9 EZAIR™ and CA-800EZ Applicators

- Designed to terminate all continuously molded terminals, disconnects, and splices in reels of 3,000 or 5,000 for high volume applications
- Precision terminal indexing through applicator for optimum reliability and productivity

- Universal base plate allows compatibility with the *PANDUIT* CP-871 electric press, and other commercially available bench presses and automatic wire processing (AWP) machines
- Quick change die sets allow for fast product change over and reduction in setup time; dies sold separately

| Part Number | Part Description  | Std. Pkg. Qty. |
|-------------|---|----------------|
| CA-800EZ*   | Applicator: runs in the AMP* Model T and K bench presses. True "quick change" applicator — no additional plates are necessary. Slide right into the press for easy changeover. Uses CD-800 series die inserts.  | 1              |
| CA9         | <i>CA9 EZAIR™</i> Applicator: terminates the entire <i>REEL SMART™</i> product line. This greatly reduces set up and maintenance time and increases productivity. This patented applicator is so smart it automatically adjusts feed stroke to the correct pitch and length for the entire product line. Crimp die changeover in less than 1 minute, minimizes downtime and increases productivity. Fast, easy loading of terminal parts without special instructions or setup personnel. Simply feed the parts strip into the applicator. All the necessary adjustments are made by the dies and the automatic feed stroke.<br>Used in CP-871 electric press.<br>Safety lockout guard ensures operator safety.<br>Positive stop adjustment rings allow for electrical and insulation crimp adjustments as desired. | 1              |

## Electric Bench Press

B1.  
Cable Ties

- For use with *PANDUIT* Universal Applicators and *REEL SMART™* Continuously Molded Terminals and Ferrules to provide a superior solution for quality, high volume terminations

- Tool crimp height adjustment feature allows user to easily set and maintain desired crimp height for consistent performance

B2.  
Cable  
Accessories

- CP-871 press has a microprocessor based controller and LCD that displays text messages and cycle count with multi-language capability

- Applicator can be changed without the use of tools to facilitate faster changeover for lower cost of ownership

TA13721A01 = 60/40 Solder Slug with 1/8" (.125) outer diameter.

TA13722A01 = 60/40 Solder Slug with 3/16" (.188) outer diameter.

(1) Insulation Support: Minimum wire insulation strain relief for normal applications.

Plastic and *DISCOGRIP*™ Insulation Crimp: Secondary wire insulation strain relief for high vibration or conductor strain applications.

Metal Insulation Grip: Maximum wire insulation strain relief for high vibration or conductor strain applications.

\*\*\*Modified lower die for barrel insulated disconnects DV-B series. Available as a complete die set or just lower die assembly.

Table continues on page D1.146.

TA13721A01 = 60/40 Solder Slug with 1/8" (.125) outer diameter.

TA13722A01 = 60/40 Solder Slug with 3/16" (.188) outer diameter.

(1) Insulation Support: Minimum wire insulation strain relief for normal applications.

Plastic and *DISCOGRIP*<sup>™</sup> Insulation Crimp: Secondary wire insulation strain relief for high vibration or conductor strain applications.

Metal Insulation Grip: Maximum wire insulation strain relief for high vibration or conductor strain applications.

\*\*\*Modified lower die for barrel insulated disconnects DV-B series. Available as a complete die set or just lower die assembly.

A = Compatible with Press.

- Special Requirements:
- \*Refer to the specific applicator operation manual for installation instructions.
  - <sup>1</sup> See specific section of installation manual for details.
  - <sup>2</sup> Komax press shim is required to operate CA-800EZ Applicator.
  - <sup>3</sup> Bench press air feed capability is required.
  - <sup>4</sup> Remove press wire stripper.

### Applicable *PAN-TERM*® products meet or exceed the following test specifications:

- UL 486A (Terminals)
  - UL 486C (Splices)
  - UL 310 (Blade Adapters)
  - CSA C22.2 No. 65 (all designs)
- UL and CSA approved products are shown with the applicable logos in the product section  
UL file #E52164, CSA File #LR31212

### Applicable *REEL SMART*™ products meet or exceed the following test specifications:

- Listed per Underwriters Laboratories, Inc. Standard UL 310 (Disconnects)
  - Recognized under the Component Recognition Program of Underwriters Laboratories Inc.
  - Certified by Canadian Standards Association (Disconnects)
- UL and CSA listed products are shown with the applicable logos in the product section  
UL file #E78526, CSA file #LR31212

### PAN-LUG™ COMPRESSION CONNECTORS

PANDUIT® PAN-LUG™ Compression Connectors provide permanent terminations for a variety of power and grounding applications, with innovation, highest reliability, and lowest installed cost. PANDUIT offers the first and only copper compression lugs and splices that meet Network Equipment-Building Systems (NEBS) Level 3 requirements as tested by Telcordia Technologies. NEBS Level 3 assures that product performance is suitable for equipment applications that demand minimal service interruptions over the life span of the equipment.

- Functional product information is marked directly on the connector, facilitating the identification, ordering, and usage of the compression connector
- Color-coded to facilitate quick identification of the proper crimping die
- Made from high strength, high conductivity electrolytic copper and aluminum alloy materials to provide optimum connectivity for power and grounding applications
- UL Listed or Recognized, CSA Certified, ABS Type Approved and tested by Telcordia – meets NEBS Level 3, as noted
- Terminations using PANDUIT® PAN-LUG™ Compression Connectors are also UL Listed and CSA Certified with specified competitor tools
- Wide assortment of manual, controlled cycle, battery operated hydraulic and pneumatic crimping tools for reliable connections at the lowest installed cost

PANDUIT® PAN-LUG™ Compression Connectors are designed for use with many different code and flex conductor types and are available in a broad range of styles and sizes including copper one-hole, two-hole, and blank tongue lugs and splices; aluminum one-hole and two-hole lugs and splices; and copper in-line reducing splices. PANDUIT offers a wide assortment of PAN-LUG™ Power Connectors to meet customer needs and today's application requirements.

### Copper Lugs

Color-coded bands for proper die selection and crimp placement

Internally beveled barrel end for easy conductor insertion (types LCCF and LCAF available with flared entry for flex conductor)

Inspection windows available to assure complete conductor insertion

**Easy-to-read, Color-coded die index numbers for PANDUIT and specified competitor crimping dies for selection**

Made from seamless, high conductivity copper tubing and electro tin-plated and burnished to inhibit corrosion

Part number, stud size, and conductor size marked on part for easy identification

### Flex Lugs

Inspection window to assure complete conductor insertion

Tin-plated to inhibit corrosion

Color-coded with PANDUIT and specified competitor tools for safe and reliable terminations

Product information marked on part for easy identification

Can be used with code conductor and flex conductor class: G, H, I, K, M and Diesel Locomotive

### Narrow Tongues

Inspection window to assure complete conductor insertion

Narrow tongue width for limited space applications

Color-coded with PANDUIT and specified competitor tools for safe and reliable terminations

Tin-plated to inhibit corrosion

Product information marked on part for easy identification

### Copper Metric Lugs

Internally beveled barrel ends for easy conductor insertion

Product information marked on part for easy identification

Made from 99.9% pure copper for high quality connection and tin-plated to inhibit corrosion

Inspection window to assure complete conductor insertion

### Copper Parallel Splice

Chamfered on both ends for fast and easy conductor insertion

Made from seamless, high conductivity copper tubing and electro tin-plated and burnished to inhibit corrosion

Intuitive part numbering for fast and accurate part selection in the field

Industry recognized color-coding for selection

Large part making in the industry – easier to read in low light conditions

### Aluminum Lugs

Color-coded end plugs for proper die selection

Easy-to-read die index numbers for PANDUIT and specified competitor crimping dies for selection

Crimping areas marked on part for proper crimp placement

Part number and conductor size marked on part for easy identification

Made from seamless wrought aluminum and electro tin-plated to inhibit corrosion

Factory pre-filled with oxide inhibitor to prevent oxidation

Compression connector crimping tools speed installation and reduce total installed cost. See pages B3.27 – B3.90.

PANDUIT designs and manufactures a full line of labeling products, software and printers to assist you with your labeling requirements. See pages E1.1 – E2.30.

Heat shrink tubing provides an economical and easy way to insulate, protect, harness and color code electrical and electronic components. See pages C3.16 – C3.39.

## Selection Guide – PAN-LUG™ Copper Compression Connectors for Copper Code Conductor

| Connector   | Barrel Style                           | Type                          | Page Number    |
|---|--|-------------------------------|----------------|
|    | Short Barrel with Inspection Window    | LCAS                          | D2.7, D2.8     |
|   |  | LCAS-H 45° bent               | D2.9, D2.10    |
|   |  | LCAS-F 90° bent               | D2.11, D2.12   |

## Code Conductor, One-Hole, Short Barrel with Window Lug

For Use with Stranded Copper Conductors

### Type LCAS

- Short barrel for limited space applications
- Color-coded barrels marked with *PANDUIT* and specified competitor die index numbers for proper crimp die selection
- Inspection window to visually assure full conductor insertion
- Tin-plated to inhibit corrosion
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* and specified competitor crimping tools and dies
- Tested by Telcordia – meets NEBS Level 3
- American Bureau of Shipping approved

\*\*Consult cable manufacturer for voltage stress relief instructions with applications greater than 2000 V.

## Code Conductor, One-Hole, Short Barrel with Window Lug, 45° Angle

**For Use with Stranded Copper Conductors**

### Type LCAS-H

- Short barrel for limited space applications
- Color-coded barrels marked with *PANDUIT* and specified competitor die index numbers for proper crimp die selection
- Inspection window to visually assure full conductor insertion
- Tin-plated to inhibit corrosion

- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* and specified competitor crimping tools and dies
- **Tested by Telcordia – meets NEBS Level 3**
- American Bureau of Shipping approved

‡See pages D3.52, D3.53 for tool and die information.

\*\*Consult cable manufacturer for voltage stress relief instructions with applications greater than 2000 V.

## Code Conductor, One-Hole, Short Barrel with Window Lug, 90° Angle

For Use with Stranded Copper Conductors

### Type LCAS-F

- Short barrel for limited space applications
- Color-coded barrels marked with *PANDUIT* and specified competitor die index numbers for proper crimp die selection
- Inspection window to visually assure full conductor insertion
- Tin-plated to inhibit corrosion
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* and specified competitor crimping tools and dies
- Tested by Telcordia – meets NEBS Level 3
- American Bureau of Shipping approved

\*\*Consult cable manufacturer for voltage stress relief instructions with applications greater than 2000 V.

## Code Conductor, One-Hole, Standard Barrel with Window Lug

For Use with Stranded Copper Conductors

### Type LCA

- Color-coded barrels marked with *PANDUIT* and specified competitor die index numbers for proper crimp die selection
- Inspection window to visually assure full conductor insertion
- Tin-plated to inhibit corrosion
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* and specified competitor crimping tools and dies

- UL Listed and CSA Certified for wide wire range-taking capability when crimped with *PANDUIT*® *UNI-DIE*™ Dieless Crimping Tools‡
- **Tested by Telcordia – meets NEBS Level 3**
- American Bureau of Shipping Approved

‡See pages D3.54 – D3.57 for tool and die information.

\*Not tested to NEBS Level 3 requirements.

\*\*Consult cable manufacturer for voltage stress relief instructions with applications greater than 2000 V.

## Code Conductor, One-Hole, Standard Barrel with Window Lug, 45° Angle

For Use with Stranded Copper Conductors

### Type LCA-H

- Color-coded barrels marked with *PANDUIT* and specified competitor die index numbers for proper crimp die selection
- Inspection window to visually assure full conductor insertion
- Tin-plated to inhibit corrosion
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* and specified competitor crimping tools and dies

- UL Listed and CSA Certified for wide wire range-taking capability when crimped with *PANDUIT*® *UNI-DIE*™ Dieless Crimping Tools‡
- **Tested by Telcordia – meets NEBS Level 3**
- American Bureau of Shipping approved

\*\*Consult cable manufacturer for voltage stress relief instructions with applications greater than 2000 V.

## Code Conductor, One-Hole, Standard Barrel with Window Lug, 90° Angle

For Use with Stranded Copper Conductors

### Type LCA-F

- Color-coded barrels marked with *PANDUIT* and specified competitor die index numbers for proper crimp die selection
- Inspection window to visually assure full conductor insertion
- Tin-plated to inhibit corrosion
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* and specified competitor crimping tools and dies

- UL Listed and CSA Certified for wide wire range-taking capability when crimped with *PANDUIT*® *UNI-DIE*™ Dieless Crimping Tools‡
- **Tested by Telcordia – meets NEBS Level 3**
- American Bureau of Shipping Approved

‡See pages D3.54 – D3.57 for tool and die information.

\*\*Consult cable manufacturer for voltage stress relief instructions with applications greater than 2000 V.

## Code Conductor, One-Hole, Standard Barrel with Window, Narrow Tongue Lug

For Use with Stranded Copper Conductors

### Type LKAN

- Narrow tongue width for limited space applications
- Color-coded barrels marked with *PANDUIT* and specified competitor die index numbers for proper crimp die selection
- Inspection window to visually assure full conductor insertion
- Tin-plated to inhibit corrosion
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* and specified competitor crimping tools and dies
- UL Listed and CSA Certified for wide wire range-taking capability when crimped with *PANDUIT*® *UNI-DIE*™ Dieless Crimping Tools‡

## **UL®** **CERTIFIED** Code Conductor, Short Blank Tongue, Standard Barrel with Window Lug

For Use with Stranded Copper Conductors

### Type LCA-00

- Color-coded barrels marked with *PANDUIT* and specified competitor die index numbers for proper crimp die selection
- Inspection window to visually assure full conductor insertion

- Tin-plated to inhibit corrosion
- UL Recognized and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* and specified competitor crimping tools and dies

A. System Overview

## Code Conductor, One-Hole, Long Barrel Lug

B1. Cable Ties

**For Use with Stranded Copper Conductors**

### Type LCB

- Long barrel maximizes number of crimps and provides premium wire pull-out strength and electrical performance
- Color-coded barrels marked with *PANDUIT* and specified competitor die index numbers for proper crimp die selection
- Enclosed barrel prevents corrosive material from entering barrel when used in harsh environments
- Tin-plated to inhibit corrosion

- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* and specified competitor crimping tools and dies
- UL Listed and CSA Certified for wide wire range-taking capability when crimped with *PANDUIT*® *UNI-DIE*™ Dieless Crimping Tools‡
- **Tested by Telcordia – meets NEBS Level 3**
- American Bureau of Shipping approved

A. System Overview

**UL LISTED CERTIFIED** **Code Conductor, One-Hole, Long Barrel Lug, 45° Angle**

**For Use with Stranded Copper Conductors**

**Type LCB-H**

- Long barrel maximizes number of crimps and provides premium wire pull-out strength and electrical performance
- Color-coded barrels marked with *PANDUIT* and specified competitor die index numbers for proper crimp die selection
- Enclosed barrel prevents corrosive material from entering barrel when used in harsh environments
- Tin-plated to inhibit corrosion
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* and specified competitor crimping tools and dies
- UL Listed and CSA Certified for wide wire range-taking capability when crimped with *PANDUIT*® *UNI-DIE*™ Dieless Crimping Tools‡
- **Tested by Telcordia – meets NEBS Level 3**
- American Bureau of Shipping approved

A. System Overview

**UL LISTED** **CSA CERTIFIED** **Code Conductor, One-Hole, Long Barrel Lug, 90° Angle**

B1. Cable Ties

**For Use with Stranded Copper Conductors**

**Type LCB-F**

- Long barrel maximizes number of crimps and provides premium wire pull-out strength and electrical performance
- Color-coded barrels marked with *PANDUIT* and specified competitor die index numbers for proper crimp die selection
- Enclosed barrel prevents corrosive material from entering barrel when used in harsh environments
- Tin-plated to inhibit corrosion
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* and specified competitor crimping tools and dies
- UL Listed and CSA Certified for wide wire range-taking capability when crimped with *PANDUIT*® *UNI-DIE*™ Dieless Crimping Tools‡
- **Tested by Telcordia – meets NEBS Level 3**
- American Bureau of Shipping approved

## Code Conductor, One-Hole, Long Barrel with Window Lug

B1. Cable Ties

### For Use with Stranded Copper Conductors

#### Type LCB-W

- Long barrel maximizes number of crimps and provides premium wire pull-out strength and electrical performance
- Inspection window to visually assure full conductor insertion
- Color-coded barrels marked with *PANDUIT* and specified competitor die index numbers for proper crimp die selection
- Tin-plated to inhibit corrosion
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* and specified competitor crimping tools and dies

- UL Listed and CSA Certified for wide wire range-taking capability when crimped with *PANDUIT*® *UNI-DIE*™ Dieless Crimping Tools‡
- **Tested by Telcordia – meets NEBS Level 3**
- Meets J-STD-607-A and TIA-942 requirements for network systems grounding applications

## UL LISTED CERTIFIED Code Conductor, One-Hole, Long Barrel with Window Lug, 45° Angle

For Use with Stranded Copper Conductors

### Type LCB-WH

- Long barrel maximizes number of crimps and provides premium wire pull-out strength and electrical performance
- Inspection window to visually assure full conductor insertion
- Tin-plated to inhibit corrosion
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with PANDUIT crimping tools and dies
- Meets J-STD-607-A and TIA-942 requirements for network systems grounding applications

## Code Conductor, One-Hole, Long Barrel with Corona Relief Taper Lug

B1. Cable Ties

**To Facilitate Use with Stranded Copper Conductors in Applications of 5000 V or More**

### Type LCBH

- Externally chamfered barrel end inhibits Corona effect when used in high voltage applications
- Long barrel maximizes number of crimps and provides premium wire pull-out strength and electrical performance
- Color-coded barrels marked with *PANDUIT* and specified competitor die index numbers for proper crimp die selection
- Enclosed barrel prevents corrosive material from entering barrel when used in harsh environments
- Tin-plated to inhibit corrosion
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* and specified competitor crimping tools and dies

## Code Conductor, Two-Hole, Standard Barrel with Window Lug

For Use with Stranded Copper Conductors

### Type LCD

- Color-coded barrels marked with *PANDUIT* and specified competitor die index numbers for proper crimp die selection
- Inspection window to visually assure full conductor insertion
- Tin-plated to inhibit corrosion
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* and specified competitor crimping tools and dies

- UL Listed and CSA Certified for wide wire range-taking capability when crimped with *PANDUIT*® *UNI-DIE*™ Dieless Crimping Tools‡
- **Tested by Telcordia – meets NEBS Level 3**
- American Bureau of Shipping approved
- Available with NEMA hole sizes and spacing

‡See pages D3.54 – D3.57 for tool and die information.

\*\*Consult cable manufacturer for voltage stress relief instructions with applications greater than 2000 V.

◆NEMA hole sizes and spacing.

**UL LISTED CERTIFIED** Code Conductor, Two-Hole, Standard Barrel with Window Lug, 45° Angle

For Use with Stranded Copper Conductors

**Type LCD-H**

- Color-coded barrels marked with *PANDUIT* and specified competitor die index numbers for proper crimp die selection
- Inspection window to visually assure full conductor insertion
- Tin-plated to inhibit corrosion
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* and specified competitor crimping tools and dies

- UL Listed and CSA Certified for wide wire range-taking capability when crimped with *PANDUIT*® *UNI-DIE*™ Dieless Crimping Tools‡
- **Tested by Telcordia – meets NEBS Level 3**
- American Bureau of Shipping approved
- Available with NEMA hole sizes and spacing

‡See pages D3.54 – D3.57 for tool and die information.

\*\*Consult cable manufacturer for voltage stress relief instructions with applications greater than 2000 V.

◆NEMA hole sizes and spacing.

## Code Conductor, Two-Hole, Standard Barrel with Window Lug, 90° Angle

For Use with Stranded Copper Conductors

### Type LCD-F

- Color-coded barrels marked with *PANDUIT* and specified competitor die index numbers for proper crimp die selection
- Inspection window to visually assure full conductor insertion
- Tin-plated to inhibit corrosion
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* and specified competitor crimping tools and dies

- UL Listed and CSA Certified for wide wire range-taking capability when crimped with *PANDUIT*® *UNI-DIE*™ Dieless Crimping Tools‡
- **Tested by Telcordia – meets NEBS Level 3**
- American Bureau of Shipping approved
- Available with NEMA hole sizes and spacing

## Code Conductor, Two-Hole, Standard Barrel with Window, Narrow Tongue Lug, 45°

B1.  
Cable Ties

**For Use with Stranded Copper Conductors**

### Type LCDN-H

- Narrow tongue width for limited space applications
- Color-coded barrels marked with *PANDUIT* and specified competitor die index numbers for proper crimp die selection
- Inspection window to visually assure full conductor insertion
- Tin-plated to inhibit corrosion

- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* and specified competitor crimping tools and dies
- UL Listed and CSA Certified for wide wire range-taking capability when crimped with *PANDUIT*® *UNI-DIE*™ Dieless Crimping Tools‡

## Code Conductor, Two-Hole, Standard Barrel with Window, Narrow Tongue Lug, 90°

### For Use with Stranded Copper Conductors

#### Type LCDN-F

- Narrow tongue width for limited space applications
- Color-coded barrels marked with *PANDUIT* and specified competitor die index numbers for proper crimp die selection
- Inspection window to visually assure full conductor insertion
- Tin-plated to inhibit corrosion

- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* and specified competitor crimping tools and dies
- UL Listed and CSA Certified for wide wire range-taking capability when crimped with *PANDUIT*® *UNI-DIE*™ Dieless Crimping Tools‡

‡See pages D3.54 – D3.57 for tool and die information.

\*\*Consult cable manufacturer for voltage stress relief instructions with applications greater than 2000 V.

## UL LISTED CERTIFIED Code Conductor, Two-Hole, Long Barrel Lug

For Use with Stranded Copper Conductors

### Type LCC

- Long barrel maximizes number of crimps and provides premium wire pull-out strength and electrical performance
- Color-coded barrels marked with *PANDUIT* and specified competitor die index numbers for proper crimp die selection
- Enclosed barrel prevents corrosive material from entering barrel when used in harsh environments
- Tin-plated to inhibit corrosion
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* and specified competitor crimping tools and dies
- UL Listed and CSA Certified for wide wire range-taking capability when crimped with *PANDUIT*® *UNI-DIE*™ Dieless Crimping Tools‡
- **Tested by Telcordia – meets NEBS Level 3**
- American Bureau of Shipping approved
- Available with NEMA hole sizes and spacing

\*\*Consult cable manufacturer for voltage stress relief instructions with applications greater than 2000 V.

◆NEMA hole sizes and spacing.

## Code Conductor, Two-Hole, Long Barrel Lug, 45° Angle

For Use with Stranded Copper Conductors

### Type LCC-H

- Long barrel maximizes number of crimps and provides premium wire pull-out strength and electrical performance
- Color-coded barrels marked with *PANDUIT* and specified competitor die index numbers for proper crimp die selection
- Enclosed barrel prevents corrosive material from entering barrel when used in harsh environments
- Tin-plated to inhibit corrosion
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* and specified competitor crimping tools and dies
- UL Listed and CSA Certified for wide wire range-taking capability when crimped with *PANDUIT*® *UNI-DIE*™ Dieless Crimping Tools‡
- **Tested by Telcordia – meets NEBS Level 3**
- American Bureau of Shipping approved
- Available with NEMA hole sizes and spacing

‡See pages D3.58 – D3.61 for tool and die information.

\*\*Consult cable manufacturer for voltage stress relief instructions with applications greater than 2000 V.

◆NEMA hole sizes and spacing.

## UL LISTED CERTIFIED Code Conductor, Two-Hole, Long Barrel Lug, 90° Angle

For Use with Stranded Copper Conductors

### Type LCC-F

- Long barrel maximizes number of crimps and provides premium wire pull-out strength and electrical performance
- Color-coded barrels marked with *PANDUIT* and specified competitor die index numbers for proper crimp die selection
- Enclosed barrel prevents corrosive material from entering barrel when used in harsh environments
- Tin-plated to inhibit corrosion
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* and specified competitor crimping tools and dies
- UL Listed and CSA Certified for wide wire range-taking capability when crimped with *PANDUIT*® *UNI-DIE*™ Dieless Crimping Tools‡
- **Tested by Telcordia – meets NEBS Level 3**
- American Bureau of Shipping approved
- Available with NEMA hole sizes and spacing

‡See pages D3.58 – D3.61 for tool and die information.

\*\*Consult cable manufacturer for voltage stress relief instructions with applications greater than 2000 V.

◆NEMA hole sizes and spacing.

## Code Conductor, Two-Hole, Long Barrel with Window Lug

For Use with Stranded Copper Conductors

### Type LCC-W

- Long barrel maximizes number of crimps and provides premium wire pull-out strength and electrical performance
- Inspection window to visually assure full conductor insertion
- Color-coded barrels marked with *PANDUIT* and specified competitor die index numbers for proper crimp die selection
- Tin-plated to inhibit corrosion
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* and specified competitor crimping tools and dies
- UL Listed and CSA Certified for wide wire range-taking capability when crimped with *PANDUIT*® *UNI-DIE*™ Dieless Crimping Tools‡
- **Tested by Telcordia – meets NEBS Level 3**
- Meets J-STD-607-A and TIA-942 requirements for network systems grounding applications
- Available with NEMA hole sizes and spacing

A. System Overview

## Code Conductor, Two-Hole, Long Barrel with Window Lug, 45° Angle

B1. Cable Ties

**For Use with Stranded Copper Conductors**

### Type LCC-WH

- Long barrel maximizes number of crimps and provides premium wire pull-out strength and electrical performance
- Inspection window to visually assure full conductor insertion
- Color-coded barrels marked with **PANDUIT** and specified competitor die index numbers for proper crimp die selection
- Tin-plated to inhibit corrosion
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with **PANDUIT** and specified competitor crimping tools and dies

- UL Listed and CSA Certified for wide wire range-taking capability when crimped with **PANDUIT® UNI-DIE™** Dieless Crimping Tools‡
- **Tested by Telcordia – meets NEBS Level 3**
- Meets J-STD-607-A and TIA-942 requirements for network systems grounding applications
- Available with NEMA hole sizes and spacing

\*\*Consult cable manufacturer for voltage stress relief instructions with applications greater than 2000 V.

◆NEMA hole sizes and spacing.

## Code Conductor, Two-Hole, Long Barrel with Window Lug, 90° Angle

For Use with Stranded Copper Conductors

### Type LCC-WF

- Long barrel maximizes number of crimps and provides premium wire pull-out strength and electrical performance
- Inspection window to visually assure full conductor insertion
- Color-coded barrels marked with *PANDUIT* and specified competitor die index numbers for proper crimp die selection
- Tin-plated to inhibit corrosion
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* and specified competitor crimping tools and dies
- UL Listed and CSA Certified for wide wire range-taking capability when crimped with *PANDUIT*® *UNI-DIE*™ Dieless Crimping Tools‡
- **Tested by Telcordia – meets NEBS Level 3**
- Meets J-STD-607-A and TIA-942 requirements for network systems grounding applications
- Available with NEMA hole sizes and spacing

## Code Conductor, Two-Hole, Long Barrel with Window, Narrow Tongue Lug

For Use with Stranded Copper Conductors

### Type LCCN-W

- Narrow tongue width for limited space applications
- Long barrel maximizes number of crimps and provides premium wire pull-out strength and electrical performance
- Inspection window to visually assure full conductor insertion
- Color-coded barrels marked with PANDUIT and specified competitor die index numbers for proper crimp die selection
- Tin-plated to inhibit corrosion
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with PANDUIT and specified competitor crimping tools and dies
- UL Listed and CSA Certified for wide wire range-taking capability when crimped with PANDUIT® UNI-DIE™ Dieless Crimping Tools‡
- **Tested by Telcordia – meets NEBS Level 3**
- Meets J-STD-607-A and TIA-942 requirements for network systems grounding applications
- Available with NEMA hole sizes and spacing

## Code Conductor, Two-Hole, Long Barrel with Corona Relief Taper Lug

B1. Cable Ties

**To Facilitate Use with Stranded Copper Conductors in Applications of 5000 V or More**

### Type LCCH

- Externally chamfered barrel end inhibits Corona effect when used in high voltage applications
- Long barrel maximizes number of crimps and provides premium wire pull-out strength and electrical performance
- Color-coded barrels marked with *PANDUIT* and specified competitor die index numbers for proper crimp die selection
- Enclosed barrel prevents corrosive material from entering barrel when used in harsh environments
- Tin-plated to inhibit corrosion
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* and specified competitor crimping tools and dies
- Available with NEMA hole sizes and spacing

A. System Overview

## Code Conductor, Blank Tongue, Long Barrel with Window Lug

B1. Cable Ties

### For Use with Stranded Copper Conductors

#### Type LCC-00W

- Long barrel maximizes number of crimps and provides premium wire pull-out strength and electrical performance
- Inspection window to visually assure full conductor insertion
- Color-coded barrels marked with *PANDUIT* and specified competitor die index numbers for proper crimp die selection
- Enclosed barrel prevents corrosive material from entering barrel when used in harsh environments
- Tin-plated to inhibit corrosion
- UL Recognized and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* and specified competitor crimping tools and dies

Overview

## Code Conductor, Long Barrel with Corona Relief Taper Splice

B1.  
Cable Ties

**To Facilitate Use with Stranded Copper Conductors in Applications of 5000 V or More**

### Type SCH

- Externally chamfered barrel end inhibits Corona effect when used in high voltage applications
- Color-coded barrels marked with *PANDUIT* and specified competitor die index numbers for proper crimp die selection
- Internal wire stops to prevent over-insertion of conductor
- Tin-plated to inhibit corrosion
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* and specified competitor crimping tools and dies

## Code Conductor, Long Barrel, T Splice

### For Copper-to-Copper Stranded Conductors

#### Type SCT

- Provides a means of connecting the run conductor and taking off a perpendicular tap
- Long barrel maximizes number of crimps and provides premium wire pull-out strength and electrical performance

- Run conductor size and tap conductor size marked on each barrel
- 90°C temperature rated and for use up to 600 V when crimped with *PANDUIT* and specified competitor crimping tools and dies

| Part Number | Copper Conductor Size |           | Run O.D. | Tap O.D. | Figure Dimensions (In.) |      | PANDUIT Color Code and Die Index No.‡ |            | Burdny Die Index No.‡ | T&B Die Index No.‡ | Wire Strip Length (In.) |         | Std. Pkg. Qty. |

Overview

## Code Conductor, Color-Coded Parallel Splice

B1.  
Cable Ties

### For Use with Stranded Copper Conductors

#### Type PSC

- Industry recognized color-coding allows proper part selection and quick identification of crimping dies to speed installation
- Large easy-to-read part numbering for verification in demanding low light conditions
- Tin-plated to inhibit corrosion
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* dieless and die type crimping tools
- Single crimp design speeds installation and reduces labor costs
- Chamfered on both ends to facilitate fast and easy conductor insertion to speed installation

## Copper Compression Parallel Splice

### How to Use This Guide

**Example:** (3) #14 AWG wires

(2) #12 AWG wires

- In Table 1 find wire size and # of wires on vertical axis.
- Find #12 AWG wire size and # of wires on horizontal axis.
- Find the intersection of ① and ② to identify the correct color coded splice, which corresponds to the part number in Table 2.   blue = PSCBLU-L
- See Table 3 on reverse side for proper die index number, wire strip length, and number of crimps.

| Part Number | Barrel O.D. (In.) | Length (In.) | PANDUIT Color Code | PANDUIT Die Index No. | Std. Pkg. Qty. |
|-------------|-------------------|--------------|--------------------|-----------------------|----------------|
| PSCRED-L    | 0.27              | 0.50         | Red                | P21                   | 50             |
| PSCBLU-L    | 0.31              | 0.50         | Blue               | P24                   | 50             |

## UL LISTED US SP CERTIFIED Flex Conductor, One-Hole, Standard Barrel with Window Lug

For Use with Flexible, Extra-Flexible, and Code Stranded Copper Conductors

### Type LCAX

- Can be used with code conductor and flex conductor class: G, H, I, K, M and Diesel Locomotive
- Generously beveled wire entry prevents bent back strands when inserting conductor into barrel
- Color-coded barrels marked with *PANDUIT* and specified competitor die index numbers for proper crimp die selection
- Inspection window to visually assure full conductor insertion
- Tin-plated to inhibit corrosion
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* and specified competitor crimping tools and dies
- American Bureau of Shipping approved

| Part Number  | Flex Conductor Size |                   | Code Conductor Size | Stud Hole Size (In.) | Figure Dimensions (In.) |     |     |      | PANDUIT Color Code | PANDUIT Die Index No.‡ | Burndy Die Index No.‡ | T&B Die Index No.‡ | Wire Strip Length (In.) | Std. Pkg. Qty. |

**UL LISTED** **CSA CERTIFIED** **Flex Conductor, One-Hole, Standard Barrel with Window Lug, 45° Angle**

**For Use with Flexible, Extra-Flexible, and Code Stranded Copper Conductors**

**Type LCAX-H**

- Can be used with code conductor and flex conductor class: G, H, I, K, M and Diesel Locomotive
- Generously beveled wire entry prevents bent back strands when inserting conductor into barrel
- Color-coded barrels marked with *PANDUIT* and specified competitor die index numbers for proper crimp die selection
- Inspection window to visually assure full conductor insertion
- Tin-plated to inhibit corrosion
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* and specified competitor crimping tools and dies
- American Bureau of Shipping approved

A. System Overview

## Flex Conductor, One-Hole, Standard Barrel with Window Lug, 90° Angle

**For Use with Flexible, Extra-Flexible, and Code Stranded Copper Conductors**

### Type LCAX-F

- Can be used with code conductor and flex conductor class: G, H, I, K, M and Diesel Locomotive
- Generously beveled wire entry prevents bent back strands when inserting conductor into barrel
- Color-coded barrels marked with *PANDUIT* and specified competitor die index numbers for proper crimp die selection
- Inspection window to visually assure full conductor insertion
- Tin-plated to inhibit corrosion
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* and specified competitor crimping tools and dies
- American Bureau of Shipping approved

A. System Overview

## Flex Conductor, One-Hole, Standard Barrel with Window, Narrow Tongue Lug

**For Use with Flexible, Extra-Flexible, and Code Stranded Copper Conductors**

B1. Cable Ties

### Type LCAXN

- Narrow tongue width for limited space applications
- Can be used with flex conductor class: G, H, I, K, M and Diesel Locomotive
- Generously beveled wire entry prevents bent back strands when inserting conductor into barrel

- Color-coded barrels marked with *PANDUIT* and specified competitor die index numbers for proper crimp die selection
- Inspection window to visually assure full conductor insertion
- Tin-plated to inhibit corrosion
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* and specified competitor crimping tools and dies

A. System Overview

## Flex Conductor, One-Hole, Standard Barrel with Window, Flared NEBS Lug

B1. Cable Ties

**For Use with Flexible and Extra-Flexible Copper Conductors**

### Type LCAF

- Can be used with flex conductor class: K, M, and Diesel Locomotive
- Flared entry prevents bent back strands when inserting fine strand conductor into barrel
- Color-coded barrels marked with *PANDUIT* die index numbers for proper crimp die selection
- Inspection window to visually assure full conductor insertion

- Tin-plated to inhibit corrosion
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* crimping tools and dies
- **Tested by Telcordia – meets NEBS Level 3**
- American Bureau of Shipping approved

A. System Overview

## Flex Conductor, One-Hole, Standard Barrel with Window, Flared NEBS Lug, 45° Angle

B1. Cable Ties

**For Use with Flexible and Extra-Flexible Copper Conductors**

### Type LCAF-H

- Can be used with flex conductor class: K, M, and Diesel Locomotive
- Flared entry prevents bent back strands when inserting fine strand conductor into barrel
- Color-coded barrels marked with *PANDUIT* die index numbers for proper crimp die selection
- Inspection window to visually assure full conductor insertion
- Tin-plated to inhibit corrosion
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* crimping tools and dies
- **Tested by Telcordia – meets NEBS Level 3**
- American Bureau of Shipping approved

A. System Overview

## Flex Conductor, One-Hole, Standard Barrel with Window, Flared NEBS Lug, 90° Angle

B1. Cable Ties

**For Use with Flexible and Extra-Flexible Copper Conductors**

### Type LCAF-F

- Can be used with flex conductor class: K, M, and Diesel Locomotive
- Flared entry prevents bent back strands when inserting fine strand conductor into barrel
- Color-coded barrels marked with *PANDUIT* die index numbers for proper crimp die selection
- Inspection window to visually assure full conductor insertion
- Tin-plated to inhibit corrosion
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* crimping tools and dies
- **Tested by Telcordia – meets NEBS Level 3**
- American Bureau of Shipping Approved

A. System Overview

## Flex Conductor, One-Hole, Long Barrel with Window Lug

**For Use with Flexible, Extra-Flexible, and Code Stranded Copper Conductors**

B1. Cable Ties

### Type LCBX

- Can be used with code conductor and flex conductor class: G, H, I, K, M and Diesel Locomotive
- Long barrel maximizes number of crimps and provides premium wire pull-out strength and electrical performance
- Generously beveled wire entry prevents bent back strands when inserting conductor into barrel
- Color-coded barrels marked with *PANDUIT* and specified competitor die index numbers for proper crimp die selection
- Inspection window to visually assure full conductor insertion
- Tin-plated to inhibit corrosion
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* and specified competitor crimping tools and dies
- Meets J-STD-607-A and TIA-942 requirements for network systems grounding applications

‡See pages D3.66 – D3.69 for tool and die information.

\*Not UL Listed or CSA Certified with Class K flex conductor when crimped with Burndy tools.

\*\*Consult cable manufacturer for voltage stress relief instructions with applications greater than 2000 V.

## Flex Conductor, One-Hole, Long Barrel with Window Lug, 45° Angle

For Use with Flexible, Extra-Flexible, and Code Stranded Copper Conductors

### Type LCBX-H

- Can be used with code conductor and flex conductor class: G, H, I, K, M and Diesel Locomotive
- Long barrel maximizes number of crimps and provides premium wire pull-out strength and electrical performance
- Generously beveled wire entry prevents bent back strands when inserting conductor into barrel
- Color-coded barrels marked with *PANDUIT* and specified competitor die index numbers for proper crimp die selection
- Inspection window to visually assure full conductor insertion
- Tin-plated to inhibit corrosion
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* and specified competitor crimping tools and dies
- Meets J-STD-607-A and TIA-942 requirements for network systems grounding applications

‡See pages D3.66 – D3.69 for tool and die information.

\*Not UL Listed or CSA Certified with Class K flex conductor when crimped with Burndy tools.

\*\*Consult cable manufacturer for voltage stress relief instructions with applications greater than 2000 V.

## Flex Conductor, One-Hole, Long Barrel with Window Lug, 90° Angle

**For Use with Flexible, Extra-Flexible, and Code Stranded Copper Conductors**

### Type LCBX-F

- Can be used with code conductor and flex conductor class: G, H, I, K, M and Diesel Locomotive
- Long barrel maximizes number of crimps and provides premium wire pull-out strength and electrical performance
- Generously beveled wire entry prevents bent back strands when inserting conductor into barrel
- Color-coded barrels marked with *PANDUIT* and specified competitor die index numbers for proper crimp die selection
- Inspection window to visually assure full conductor insertion
- Tin-plated to inhibit corrosion
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* and specified competitor crimping tools and dies
- Meets J-STD-607-A and TIA-942 requirements for network systems grounding applications

‡See pages D3.66 – D3.69 for tool and die information.  
 \*Not UL Listed or CSA Certified with Class K flex conductor when crimped with Burndy tools.  
 \*\*Consult cable manufacturer for voltage stress relief instructions with applications greater than 2000 V.

## Flex Conductor, Two-Hole, Standard Barrel with Window Lug

For Use with Flexible, Extra-Flexible, and Code Stranded Copper Conductors

### Type LCDX

- Can be used with code conductor and flex conductor class: G, H, I, K, M and Diesel Locomotive
- Generously beveled wire entry prevents bent back strands when inserting conductor into barrel
- Color-coded barrels marked with *PANDUIT* and specified competitor die index numbers for proper crimp die selection
- Inspection window to visually assure full conductor insertion
- Tin-plated to inhibit corrosion
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* and specified competitor crimping tools and dies
- American Bureau of Shipping approved
- Available with NEMA hole sizes and spacing

‡See pages D3.66 – D3.69 for tool and die information.

\*Not UL Listed or CSA Certified with Class K flex conductor when crimped with Burndy tools.

\*\*Consult cable manufacturer for voltage stress relief instructions with applications greater than 2000 V.

◆NEMA hole sizes and spacing.

‡See pages D3.66 – D3.69 for tool and die information.

\*Not UL Listed or CSA Certified with Class K flex conductor when crimped with Burndy tools.

\*\*Consult cable manufacturer for voltage stress relief instructions with applications greater than 2000 V.

◆NEMA hole sizes and spacing.

## Flex Conductor, Two-Hole, Standard Barrel with Window Lug, 45° Angle

For Use with Flexible, Extra-Flexible, and Code Stranded Copper Conductors

### Type LCDX-H

- Can be used with code conductor and flex conductor class: G, H, I, K, M and Diesel Locomotive
- Generously beveled wire entry prevents bent back strands when inserting conductor into barrel
- Color-coded barrels marked with *PANDUIT* and specified competitor die index numbers for proper crimp die selection
- Inspection window to visually assure full conductor insertion
- Tin-plated to inhibit corrosion
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* and specified competitor crimping tools and dies
- American Bureau of Shipping approved
- Available with NEMA hole sizes and spacing

‡See pages D3.66 – D3.69 for tool and die information.

\*\*Consult cable manufacturer for voltage stress relief instructions with applications greater than 2000 V.

◆NEMA hole sizes and spacing.

## Flex Conductor, Two-Hole, Standard Barrel with Window Lug, 90° Angle

For Use with Flexible, Extra-Flexible, and Code Stranded Copper Conductors

### Type LCDX-F

- Can be used with code conductor and flex conductor class: G, H, I, K, M and Diesel Locomotive
- Generously beveled wire entry prevents bent back strands when inserting conductor into barrel
- Color-coded barrels marked with *PANDUIT* and specified competitor die index numbers for proper crimp die selection
- Inspection window to visually assure full conductor insertion
- Tin-plated to inhibit corrosion
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* and specified competitor crimping tools and dies
- American Bureau of Shipping approved
- Available with NEMA hole sizes and spacing

‡See pages D3.66 – D3.69 for tool and die information.

\*\*Consult cable manufacturer for voltage stress relief instructions with applications greater than 2000 V.

◆NEMA hole sizes and spacing.

## Flex Conductor, Two-Hole, Standard Barrel with Window, Narrow Tongue Lug

For Use with Flexible, Extra-Flexible, and Code Stranded Copper Conductors

### Type LCDXN

- Narrow tongue width for limited space applications
- Can be used with code conductor and flex conductor class: G, H, I, K, M and Diesel Locomotive
- Generously beveled wire entry prevents bent back strands when inserting conductor into barrel
- Color-coded barrels marked with *PANDUIT* and specified competitor die index numbers for proper crimp die selection
- Inspection window to visually assure full conductor insertion
- Tin-plated to inhibit corrosion
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* and specified competitor crimping tools and dies
- Available with NEMA hole sizes and spacing

## Flex Conductor, Two-Hole, Standard Barrel with Window, Narrow Tongue Lug, 45°

**For Use with Flexible Copper Conductors**

### Type LCDXN-H

- Narrow tongue width for limited space applications
- To be used with Diesel Locomotive flex conductor
- Generously beveled wire entry prevents bent back strands when inserting conductor into barrel
- Color-coded barrels marked with *PANDUIT* and specified competitor die index numbers for proper crimp die selection

- Inspection window to visually assure full conductor insertion
- Tin-plated to inhibit corrosion
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* and specified competitor crimping tools and dies

## Flex Conductor, Two-Hole, Long Barrel with Window Lug

For Use with Flexible, Extra-Flexible, and Code Stranded Copper Conductors

### Type LCCX

- Can be used with code conductor and flex conductor class: G, H, I, K, M and Diesel Locomotive
- Long barrel maximizes number of crimps and provides premium wire pull-out strength and electrical performance
- Generously beveled wire entry prevents bent back strands when inserting conductor into barrel
- Color-coded barrels marked with *PANDUIT* and specified competitor die index numbers for proper crimp die selection
- Inspection window to visually assure full conductor insertion
- Tin-plated to inhibit corrosion
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* and specified competitor crimping tools and dies
- Meets J-STD-607-A and TIA-942 requirements for network systems grounding applications
- Available with NEMA hole sizes and spacing

‡See pages D3.66 – D3.69 for tool and die information.

\*Not UL Listed or CSA Certified with Class K flex conductor when crimped with Burndy tools.

\*\*Consult cable manufacturer for voltage stress relief instructions with applications greater than 2000 V.

^Slotted lug, refer to Figure 2.

‡See pages D3.66 – D3.69 for tool and die information.

\*\*Consult cable manufacturer for voltage stress relief instructions with applications greater than 2000 V.

◆NEMA hole sizes and spacing.

## Flex Conductor, Two-Hole, Long Barrel with Window Lug, 45° Angle

For Use with Flexible, Extra-Flexible, and Code Stranded Copper Conductors

### Type LCCX-H

- Can be used with code conductor and flex conductor class: G, H, I, K, M and Diesel Locomotive
- Long barrel maximizes number of crimps and provides premium wire pull-out strength and electrical performance
- Generously beveled wire entry prevents bent back strands when inserting conductor into barrel
- Color-coded barrels marked with *PANDUIT* and specified competitor die index numbers for proper crimp die selection
- Inspection window to visually assure full conductor insertion
- Tin-plated to inhibit corrosion
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* and specified competitor crimping tools and dies
- Meets J-STD-607-A and TIA-942 requirements for network systems grounding applications
- Available with NEMA hole sizes and spacing

‡See pages D3.66 – D3.69 for tool and die information.

\*Not UL Listed or CSA Certified with Class K flex conductor when crimped with Burndy tools.

\*\*Consult cable manufacturer for voltage stress relief instructions with applications greater than 2000 V.

‡See pages D3.66 – D3.69 for tool and die information.

\*\*Consult cable manufacturer for voltage stress relief instructions with applications greater than 2000 V.

◆NEMA hole sizes and spacing.

## Flex Conductor, Two-Hole, Long Barrel with Window Lug, 90° Angle

For Use with Flexible, Extra-Flexible, and Code Stranded Copper Conductors

### Type LCCX-F

- Can be used with code conductor and flex conductor class: G, H, I, K, M and Diesel Locomotive
- Long barrel maximizes number of crimps and provides premium wire pull-out strength and electrical performance
- Generously beveled wire entry prevents bent back strands when inserting conductor into barrel
- Color-coded barrels marked with *PANDUIT* and specified competitor die index numbers for proper crimp die selection
- Inspection window to visually assure full conductor insertion
- Tin-plated to inhibit corrosion
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* and specified competitor crimping tools and dies
- Meets J-STD-607-A and TIA-942 requirements for network systems grounding applications
- Available with NEMA hole sizes and spacing

‡See pages D3.66 – D3.69 for tool and die information.

\*\*Consult cable manufacturer for voltage stress relief instructions with applications greater than 2000 V.

◆NEMA hole sizes and spacing.

## Flex Conductor, Two-Hole, Long Barrel, Flared NEBS Lug

For Use with Flexible and Extra-Flexible Copper Conductors

### Type LCCF

- Can be used with flex conductor class: K, M, and Diesel Locomotive
- Long barrel maximizes the number of crimps and provides premium wire pull-out strength and electrical performance
- Flared entry prevents bent back strands when inserting fine strand conductor into barrel
- Color-coded barrels marked with *PANDUIT* die index numbers for proper crimp die selection
- Enclosed barrel prevents corrosive material from entering barrel when used in harsh environments
- Tin-plated to inhibit corrosion
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* crimping tools and dies
- **Tested by Telcordia – meets NEBS Level 3**
- Available with NEMA hole sizes and spacing

‡See pages D3.70, D3.71 for tool and die information.

\*\*Consult cable manufacturer for voltage stress relief instructions with applications greater than 2000 V.

◆NEMA hole sizes and spacing.

## Flex Conductor, Two-Hole, Long Barrel, Flared NEBS Lug, 45° Angle

For Use with Flexible and Extra-Flexible Copper Conductors

### Type LCCF-H

- Can be used with flex conductor class: K, M, and Diesel Locomotive
- Long barrel maximizes the number of crimps and provides premium wire pull-out strength and electrical performance
- Flared entry prevents bent back strands when inserting fine strand conductor into barrel
- Color-coded barrels marked with *PANDUIT* die index numbers for proper crimp die selection
- Enclosed barrel prevents corrosive material from entering barrel when used in harsh environments
- Tin-plated to inhibit corrosion
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* crimping tools and dies
- **Tested by Telcordia – meets NEBS Level 3**
- Available with NEMA hole sizes and spacing

‡See pages D3.70, D3.71 for tool and die information.

\*\*Consult cable manufacturer for voltage stress relief instructions with applications greater than 2000 V.

◆NEMA hole sizes and spacing.

## Flex Conductor, Two-Hole, Long Barrel, Flared NEBS Lug, 90° Angle

For Use with Flexible and Extra-Flexible Copper Conductors

### Type LCCF-F

- Can be used with flex conductor class: K, M, and Diesel Locomotive
- Long barrel maximizes the number of crimps and provides premium wire pull-out strength and electrical performance
- Flared entry prevents bent back strands when inserting fine strand conductor into barrel
- Color-coded barrels marked with *PANDUIT* die index numbers for proper crimp die selection
- Enclosed barrel prevents corrosive material from entering barrel when used in harsh environments
- Tin-plated to inhibit corrosion
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* crimping tools and dies
- **Tested by Telcordia – meets NEBS Level 3**
- Available with NEMA hole sizes and spacing

## Flex Conductor, Standard Barrel, Flared, NEBS Butt Splice

For Use with Flexible and Extra-Flexible Copper Conductors

### Type SCSF

- Can be used with flex conductor class: K, M, and Diesel Locomotive
- Flared entry prevents bent back strands when inserting fine strand conductor into barrel
- Color-coded barrels marked with *PANDUIT* die index numbers for proper crimp die selection
- Internal wire stops to prevent over-insertion of conductor
- Tin-plated to inhibit corrosion
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* crimping tools and dies
- **Tested by Telcordia – meets NEBS Level 3**
- American Bureau of Shipping approved

| Part Number | Flex Conductor Size |                   | Figure Dimensions (In.) |      | PANDUIT Color Code | PANDUIT Die Index No.‡ | Wire Strip Length (In.) | Std. Pkg. Qty. |

Overview

## Code/Flex Conductor, with Window, In-Line Reducing Splice Kit

B1.  
Cable Ties

### Type RSCK

- Includes all components in one package for making a complete electrical connection: *PANDUIT* copper compression RSC in-line reducing splice (see pages D2.106 – D2.107) and crystal clear PVC heat shrink sleeves pre-cut to length to insulate reducing splice
- PANDUIT* RSC in-line reducing splice is UL Listed and temperature rated to 90°C when crimped with *PANDUIT* crimping tools and dies
- PANDUIT* crystal clear PVC heat shrink has a UL 224 VW-1 flammability rating and passes Telcordia GR-347-CORE Compression and Cut-Through Penetration Test and Abrasion Resistance Test
- PANDUIT* crystal clear PVC heat shrink is UL Recognized with a temperature rating of 150°C, high temperature insulating property
- Rated for 600 V applications when *PANDUIT* crystal clear PVC heat shrink is applied

## Code/Flex Conductor, with Window, In-Line Reducing Splice

**For Use with Stranded Copper Code and Class I Flex Conductors**

### Type RSC

- Low profile design provides minimum space requirements
- Manufactured from seamless, high conductivity copper tubing
- Color-coded barrels marked with *PANDUIT* and specified competitor die index numbers for proper crimp die selection
- Inspection windows in each barrel to visually assure full conductor insertion

- Generous internally beveled wire entry for easy conductor insertion
- Tin-plated to inhibit corrosion
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* and specified competitor crimping tools and dies
- Also sold as a kit with crystal clear PVC heat shrink (see pages D2.104, D2.105)

### For Use with Class 2 Stranded Copper Conductors

#### Type LCMA

- Inspection window to visually assure full conductor insertion
- Tin-plated to inhibit corrosion
- UL Listed, UL Recognized, and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* tools and dies

- Product information marked on connector for selection and installation
- Rounded tongue convenient for use in tight spaces
- Internally beveled wire entry for fast and easy installation

## Metric Conductor, Two-Hole, Standard Barrel with Window Lug

For Use with Class 2 Stranded Copper Conductors

### Type LCMD

- Inspection window to visually assure full conductor insertion
- Tin-plated to inhibit corrosion
- UL Listed, UL Recognized, and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* tools and dies
- Product information marked on connector for selection and installation
- Internally beveled wire entry for fast and easy installation

Overview

## Metric Conductor, Standard Barrel, Butt Splice

For Use with Class 2 Stranded Copper Conductors

B1.  
Cable Ties

### Type SCMS

- Tin-plated to inhibit corrosion
- UL Listed, UL Recognized, and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* tools and dies
- Product information marked on connector for selection and installation
- Internally beveled wire entry for fast and easy installation

## PANDUIT Custom Copper Compression Lugs for Special Applications

Manufactured to meet your special dimensional specifications and requirements

PANDUIT has incorporated manufacturing processes that permit custom lug capabilities with premium two day or standard two week delivery. PANDUIT offers a wide variety of dimensional choices for #8 AWG to 250 kcmil copper code lugs and #8 AWG to 4/0 AWG copper flex lugs.

### Options:

- Tongues**
- Straight or bent
  - Stacking
  - Special lengths
- Stud Holes**
- Various sizes, #10 to 1/2"
  - Multiple hole sizes and spacing
  - Special locations
- Barrels**
- Three standard lengths: short, standard, and long
  - Custom lengths

### With Dependable PANDUIT Service

- Excellent quality
- Fast delivery
- Low minimum order quantities
- Competitive prices

## Custom Lugs Spec Sheet Instructions

Use these instructions to design your own custom lugs. Fill in the Custom Lugs Preliminary Spec Sheet to place your custom lugs order. You can copy the sheet from page D2.115 or download it at [www.panduit.com/customlugs](http://www.panduit.com/customlugs).

- Fill out this section completely.
  - Check the conductor size and type (code or flex). Fill in the strand designation and type for flex conductor.
  - Check a barrel length. Refer to Chart "A" for standard barrel length dimensions. If the length you require is not listed, fill in the special box with your required length.
  - Check "YES" if an inspection window is required; check "NO" if it is not required.
  - Check the barrel end type you require.
  - Check a stud size and tongue style (one-hole, two-hole, or blank). Refer to Chart "A" and Chart "B" for standard tongue dimensions. If you require tongue dimensions other than those listed, fill in the box that corresponds to the feature that requires a special dimension. You must fill in a hole spacing on two-hole lugs and tongue length on blank tongue lugs.
- Note: Steps 7 and 8 are for bent or stacking lugs ONLY.**
- Check the stacking lug you require. If both upper and lower lugs are required, check "both" (two drawings will be provided). If you choose a bent stacking lug, fill in the required angle.
  - Check the bent lug you require. If you check "special angle", fill in the required angle.
  - Check the special options you require. Fill in any blank lines that correspond to the option you've selected.
  - Fax or mail the completed spec sheet to *PANDUIT* Corp. Phone/fax numbers are listed on the bottom of the Custom Lugs Preliminary Spec Sheet (see page D2.115 or go to [www.panduit.com/customlugs](http://www.panduit.com/customlugs)). *PANDUIT* will send drawings for your approval.

Chart "A"

| Code Conductor Size | Flex Conductor Size | Barrel |      | Barrel Length |          |      | Tongue Width      |     |      |     |     |
|---------------------|---------------------|--------|------|---------------|----------|------|-------------------|-----|------|-----|-----|

**UL LISTED** **CSA CERTIFIED** **Code Conductor, One-Hole, Aluminum Lug**

**For Use with Stranded Aluminum or Copper Code Conductors**

**Type LAA**

- Manufactured from high conductivity thick wall wrought aluminum
- Enclosed barrel prevents corrosive material from entering barrel when used in harsh environments
- Factory pre-filled with joint compound and sealed with easy pull-out end plug to inhibit corrosion
- Tin-plated to inhibit corrosion
- Color-coded end plug and *PANDUIT* and specified competitor die index numbers marked on barrel for proper crimp die selection
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* and specified competitor crimping tools and dies

‡See pages D3.80, D3.81 for tool and die information.

\*\*Consult cable manufacturer for voltage stress relief instructions with applications greater than 2000 V.

See page D2.123 for *PANDUIT* joint compounds recommended for pad to pad and conductor connections.

## Code Conductor, Two-Hole, Aluminum Lug

**For Use with Stranded Aluminum or Copper Code Conductors**

### Type LAB

- Manufactured from high conductivity thick wall wrought aluminum
- Factory pre-filled with joint compound and sealed with easy pull-out end plug to inhibit corrosion
- Color-coded end plug and *PANDUIT* and specified competitor die index numbers marked on barrel for proper crimp die selection
- Enclosed barrel prevents corrosive material from entering barrel when used in harsh environments
- Tin-plated to inhibit corrosion
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* and specified competitor crimping tools and dies
- Available with NEMA hole sizes and spacing

## Belleville Compression Washers

B1.  
Cable Ties

### Type CW

• Conical spring washer for use when assembling aluminum connectors to copper and/or steel pads, compensates for differing rates of thermal expansion to keep hardware assembly from loosening

- For assembly information, see page D2.164
- Made from hardened steel to provide high strength
- Cadmium-plated to inhibit corrosion

## Code Conductor, Aluminum Splice

For Use with Stranded Aluminum-to-Aluminum or Copper-to-Copper Conductors

### Type SA

- Manufactured from high conductivity thick wall wrought aluminum
- Factory pre-filled with joint compound and sealed with easy pull-out end plug to inhibit corrosion
- Color-coded end plugs and *PANDUIT* and specified competitor die index numbers marked on barrel for proper crimp die selection
- Tin-plated to inhibit corrosion
- Internal solid center prevents over-insertion of conductor
- UL Listed and CSA Certified to 35 KV\*\* and temperature rated to 90°C when crimped with *PANDUIT* and specified competitor crimping tools and dies

| Part Number | Aluminum or Copper Conductor Size | Figure Dimensions (In.) |      | PANDUIT Color Code | PANDUIT Die Index No.‡ | Burndy Die Index No.‡ | T&B Die Index No.‡ | Wire Strip Length (In.) | Std. Pkg. Qty. |

## Code Conductor, Aluminum, Reducing Splice

B1.  
Cable Ties

### For Reducing Stranded Aluminum-to-Aluminum or Aluminum-to-Copper Conductors

#### Type SAR

B2.  
Cable  
Accessories

- Dual rated for use with aluminum or copper conductors
- Tin-plated to inhibit corrosion
- Factory pre-filled with joint compound and sealed with easy pull-out end plug to inhibit corrosion
- For use up to 35 KV\*\* and temperature rated 90°C when crimped with *PANDUIT* and specified competitor crimping tools and dies
- Color-coded end plug and *PANDUIT* and specified competitor die index numbers marked on barrel for proper crimp die selection

**UL LISTED Code Conductor, Aluminum, Bi-Metallic Pin Connector**

**Provides Copper Pigtail for Connecting Aluminum Conductors to a Copper or Aluminum/Copper Rated Mechanical Lug**

**Type BPC**

- Factory pre-filled with joint compound and sealed with easy pull-out end plug to inhibit corrosion
- Color-coded end plug and *PANDUIT* die index number marked on barrel for proper crimp die selection
- Insulating rubber sleeve included to insulate aluminum barrel from contact with copper connector when attached to pin

- Tin-plated to inhibit corrosion
- UL Listed per UL 486B; temperature rated 90°C and for use up to 600 V when crimped with *PANDUIT* and specified competitor crimping tools and dies

## Code Conductor, Aluminum HTAP

B1.  
Cable Ties

**For Combinations of Aluminum-to-Aluminum or Aluminum-to-Copper Code Conductors**

### Type HTAP

B2.  
Cable  
Accessories

- Dual rated – used to tap into continuous runs of aluminum conductor with either aluminum or copper tap conductor
- Factory pre-filled with joint compound to inhibit corrosion
- Conductor range for each tap groove and die index number marked on barrel to identify proper conductor size and crimping die to be used
- Made from high conductivity, high strength aluminum to provide premium mechanical and electrical performance
- For use up to 600 V and 90°C temperature rated when crimped with *PANDUIT* crimping tools and dies

## Black Covers for Copper CTAPs and Aluminum HTAPs

**Protect CTAP or HTAP Connection from Environment And Act as Insulation**

### Type TAPC

- Used to insulate connectors and protect tap connections from corrosive environments
- Made of durable, weather-resistant black polypropylene
- Double locking latches provide secure cover installation
- Flexible molded fingers at end of covers conform to conductor and prevent foreign objects from contacting connector

| Part Number   | Use with CTAP Part Number              | Use with HTAP Part Number  | Figure Dimensions (In.) |      |      | Std. Pkg. Qty. |

For information on aluminum HTAPs, see page D2.122.

## Joint Compounds

**For Use with Aluminum Connectors**

### Type CMP

- Oxide inhibitor for compression conductor connections lowers electrical resistance of compression joint while sealing out air and moisture to prevent the formation of surface oxides
- Wide operating temperature range; can be used in a wide range of electrical and environmental conditions
- Packaged in convenient dispenser bottles

| Part Number | Part Description   | Std. Pkg. Qty. |
|-------------|--|----------------|
| CMP-100-1   | Contact aid for pad-to-pad or thread-to-thread aluminum connections, 8 oz. Operating temperature range -60°F (-51°C) to 400°F (204°C).   | 1              |
| CMP-200-1   | Contact aid for cable connections with compression connections made on aluminum conductor, 8 oz. Operating temperature range -40°F (-40°C) to 400°F (204°C). Compatible with all insulating materials. | 1              |

## NOTES

## PAN-LUG™ MECHANICAL CONNECTORS

PANDUIT offers a broad variety of mechanical lugs, splices, and split bolt connectors suitable for a wide range of electrical terminations using code conductor. Designed to be reusable and installed without special tooling, PAN-LUG™ Mechanical Connectors provide quality performance, ease of installation, and lowest installed cost.

- Functional product information is marked directly on the connector, facilitating the identification, ordering, and usage of the mechanical connector
- Incorporate wide wire range-taking capability to minimize inventory requirements
- Made from high strength, high conductivity electrolytic copper and aluminum alloy materials to provide optimum connectivity for power and grounding applications
- UL Listed and CSA Certified, as noted

PAN-LUG™ Mechanical Connectors include split bolt connectors, copper mechanical lugs, aluminum mechanical lugs and aluminum multi-tap connectors with clear PVC insulation. Products are available in stamped and formed, extruded and cast varieties of multiple barrel and tongue configurations to provide solutions for diverse power and grounding needs. PANDUIT offers a wide assortment of PAN-LUG™ Power and Grounding Connectors to meet customer needs and today's application requirements.

A. System Overview

## Features and Benefits – PAN-LUG™ Mechanical Connectors

B1. Cable Ties

### Copper Split Bolt Connectors

Part number and conductor range marked on part for easy identification

Hex head with large wrench flats for easy assembly

Waxed body to prohibit binding of contact pad or nut

250 kcmil and larger sizes have contact serrations for higher pull-out strength

Extra-long body available to connect two taps with one run

Made from high strength copper alloy

### Cast Copper Connectors

Made from high strength copper alloy

Inspection windows to assure complete conductor insertion

Serrated barrel available for high pull-out strength

Part number and conductor range marked on part for easy identification

Flat bottom allows full contact surface mounting

B2. Cable Accessories

B3. Stainless Steel Ties

C1. Wiring Duct

C2. Surface Raceway

### Stamped and Formed Copper Connectors

Made from high strength, electrolytic copper alloy

Hex head bolt (slotted set screw used up through 1/0 AWG sizes) for assembly with a wrench or screwdriver

Part number and conductor range marked on part for easy identification

Two styles of tongues available: fixed and floating

### Aluminum Connectors

Dual rated for aluminum or copper conductors

Hex socket set screw (slotted set screw used up through 2/0 AWG sizes) for assembly with a wrench or screwdriver

Made from high strength, extruded aluminum alloy

Part number and conductor range marked on part for easy identification

Electro tin-plated to inhibit corrosion

C3. Abrasion Protection

C4. Cable Management

D1. Terminals

D2. Power Connectors

### Multi-Tap Connectors

Hex socket set screws (slotted set screw for smallest size) for assembly with a wrench or screwdriver

Pre-insulated aluminum body to eliminate the need for taping

Clear PVC insulation for visual inspection of the complete conductor insertion

Dual-sided conductor entry

Factory pre-filled with oxide inhibitor to prevent oxidation

Made from high strength, extruded aluminum alloy

Available with two isolated mounting holes at either end of connector to facilitate direct mounting using 1/4" bolts.

D3. Grounding Connectors

- Multiple conductor combinations.
- ◆NEMA hole sizes and spacing.
- Uses slotted set screw.
- (1) 1.00" stud hole spacing.
- (2) 1.75" stud hole spacing.
- (3) 1.87" stud hole spacing.

## Selection Guide – PAN-LUG™ Mechanical Connectors, Aluminum

| 1. Select Connector Type and Stud Hole Size Desired  |                      | 2. Determine Conductor Size and then Select PANDUIT Part Number |         |         |                  |        |        |                    |        |         |                  |         |         |                    |           |           |                   |           |           |                   |            |  |                   |  |  |

‡LAMA600S-38-6 can also be used with (2) 250 kcmil-1/0 AWG conductors.

◆NEMA hole sizes and spacing.

■Uses slotted set screws.

▲Uses double set screws.

^Not CSA Certified.

‡‡Not UL Listed.

Note: Use of PANDUIT oxide inhibiting joint compound CMP-100 is recommended for use with aluminum mechanical connectors.

## Selection Guide – PAN-LUG™ Mechanical Connectors, Split Bolts and Multi-Taps

1. Select Split Bolt Style Desired
2. Determine Conductor Range and then Select PANDUIT Part Number

### Copper Split Bolt Connectors – SBC

For Use with Copper Code Conductors

### Multi-Tap Connectors with Clear Insulation

For Use with Aluminum and Copper Code Conductor Combinations

D2.155 – D2.160

| Type   | Description                       | No. of Ports | Copper or Aluminum Code Conductor Range |
|--------|-----------------------------------|--------------|---|
| PCSB   | Double-Sided Wire Entry           | 2 to 14      | 14 AWG Solid to 750 kcmil               |
| PCSB-S | Single-Sided Wire Entry           | 2 to 14      | 14 AWG Stranded to 600 kcmil            |
| PISR   | In-Line Splicer/Reducer           | 2            | 14 AWG Stranded to 500 kcmil            |
| PCSBM  | Double-Sided Wire Entry Mountable | 2 to 14      | 14 AWG Stranded to 600 kcmil            |
| PCSBMT | Single-Sided Wire Entry Mountable | 2 to 14      | 14 AWG Stranded to 600 kcmil            |

## Split Bolt, Copper

For Use with Copper Code Conductors

### Type SBC

- Made from high strength copper alloy to resist corrosion and provide premium electrical and mechanical performance
- Offered with extra long body to allow connection of one or two taps to a single run conductor
- Wide wire range-taking capability minimizes inventory requirements
- Nut hex provides correct fit with socket, box, or open end wrenches resulting in proper torquing of electrical connection

- Pressure bar provides secure connection on a full range of conductor combinations used with each connector assuring premium wire pull-out strength
- UL Listed and CSA Certified for use up to 600 V and temperature rated 90°C

**UL LISTED CERTIFIED Split Bolt, Copper, Tin-Plated**

**For Specified Combinations of Copper and Aluminum Code Conductors**

**Type SBCT**

- Made from high strength copper alloy to provide premium electrical and mechanical performance
- Tin-plated to inhibit corrosion and oxidation
- Offered with dual rating for use with aluminum or copper conductors
- Wide wire range-taking capability minimizes inventory requirements
- Nut hex provides correct fit with socket, box, or open end wrenches resulting in proper torquing of electrical connection
- Free floating pressure bar separates conductors of dissimilar materials for secure connection on a full range of conductor combinations
- UL Listed and CSA Certified for use up to 600 V and UL temperature rated 90°C

The use of PANDUIT oxide inhibiting joint compound (CMP-100) is recommended. See pages D2.123 and D2.161.

**UL LISTED SP® Split Bolt, Aluminum**

**For Use with Copper and Aluminum Code Conductors**

**Type SBA**

- Made from lightweight, durable aluminum alloy to resist corrosion and provide premium electrical and mechanical performance
- Dual rated for use with aluminum to aluminum, aluminum to copper, and copper to copper conductor combinations
- Tin-plated to inhibit corrosion and oxidation
- Wide wire range-taking capability minimizes inventory requirements
- True hex design for body and nut hex provides correct fit with socket, box, or open end wrenches resulting in proper torquing of electrical connection
- Free floating pressure bar separates conductors of dissimilar materials for secure connection on a full range of conductor combinations
- UL Listed and CSA Certified for use up to 600 V and UL temperature rated 90°C

The use of PANDUIT oxide inhibiting joint compound (CMP-100) is recommended. See page D2.161.  
 ^Not CSA Certified.

**UL LISTED Two-Bolt Connector, Bronze**

**For Use with Copper Code Conductors**

**Type VT**

- Made from high strength bronze for heavy duty connections and to inhibit corrosion
- Cap swivels for easy installation of conductors
- Rubber washer retains hardware to connector and eliminates loose parts
- High strength silicon-bronze hardware provides premium mechanical performance when assembled to conductor
- Wide wire range-taking capability minimizes inventory requirements
- UL Listed for use up to 600 V and 90°C temperature rated

## Two-Bolt Connector, Bronze, Tin-Plated

**For Use with Copper and Aluminum Code Conductors**

### Type VTA

- Made from high strength bronze for heavy duty connections
- Tin-plated to inhibit corrosion and oxidation
- Cap swivels for easy installation of conductors
- Rubber washer retains hardware to connector and eliminates loose parts
- High strength silicon-bronze hardware provides premium mechanical performance when assembled to conductor
- Offered for use with aluminum conductors, but not UL Listed
- UL Listed for use up to 600 V and 90°C temperature rated when used with copper code conductor

| Part Number | Max. Copper Conductor Size | Max. Aluminum Conductor Size* | Copperweld Solid | Figure Dimensions (In.) |      |      |      | Hex Size (In.) | Tightening Torque (In.-Lbs.) | Std. Pkg. Qty. |

\*Not UL Listed.

## One-Hole, Straight Tongue, Barrel Post Lug

**For Use with Copper Code Conductors**

### Type ML

- Made from high strength electrolytic copper to provide premium electrical and mechanical performance
- Compact design saves space
- Wide wire range-taking capability minimizes inventory requirements
- Inspection window to visually assure full conductor insertion
- Plated steel set screw provides high strength, durable electrical contact between conductor and connector
- Flat bottom allows for complete contact with mounting surface
- UL Listed for use up to 600 V and temperature rated 90°C

| Part Number     | Copper Conductor Size Range | Stud Hole Size (In.) | Hex Key Size (In.) | Figure Dimensions (In.) |     |      |     |      | Tightening Torque (In.-Lbs.) | Std. Pkg. Qty. |

\*HL1-25-X and HL4-1-X do not include pressure plates.  
\*\*Uses slotted head set screw.

## One-Hole, Straight Tongue, Flag Lug

**For Use with Copper Code Conductors**

### Type HLB

- Provides connection of conductor at right angles to terminal bar
- Cast from high strength corrosion resistant copper alloy to provide premium electrical and mechanical performance
- Compact design saves space
- Wire range-taking capability minimizes inventory requirements
- Internal pressure plate provides uniform clamping force on conductor for premium electrical performance
- Flush bottom allows for complete contact with mounting surface
- Inspection window to visually assure full conductor insertion
- UL Listed for use up to 600 V and temperature rated 90°C

| Part Number | Copper Conductor Size Range | Stud Hole Size (In.) | Hex Key Size (In.) | Figure Dimensions (In.) |     |     |     |     | Tightening Torque (In.-Lbs.) | Std. Pkg. Qty. |

\*\*Uses slotted head set screw.

## Two-Hole, Straight Tongue Lug with NEMA Hole Sizes and Spacing

For Use with Copper Code Conductors

### Type HL-2N

- Cast from high strength corrosion resistant copper alloy to provide premium electrical and mechanical performance
- Wide wire range-taking capability minimizes inventory requirements
- Internal pressure plate provides uniform clamping force on conductor for premium electrical performance
- Internal barrel serrations allow for premium wire pull-out strength
- Inspection window to visually assure full conductor insertion
- Flat bottom allows for complete contact with mounting surface
- UL Listed for use up to 600 V and temperature rated 90°C
- Available with NEMA hole sizes and spacing

| Part Number | Copper Conductor Size Range | Stud Hole Size (In.) | Stud Hole Spacing (In.) | Hex Key Size (In.) | Figure Dimensions (In.) |      |      |     |      | Tightening Torque (In.-Lbs.) | Std. Pkg. Qty. |

◆NEMA hole sizes and spacing.

## Two-Hole, Straight Tongue, Tandem Set Screw Lug

For Use with Copper Code Conductors

### Type HHL-2N

- Cast from high strength corrosion resistant copper alloy to provide premium electrical and mechanical performance
- Double set screws provide additional wire secureness for use in heavy duty applications
- Wide wire range-taking capability minimizes inventory requirements
- Internal pressure plate provides uniform clamping force on conductor for premium electrical performance
- Internal barrel serrations allow for premium wire pull-out strength
- Inspection window to visually assure full conductor insertion
- Flat bottom allows for complete contact with mounting surface
- UL Listed for use up to 600 V and temperature rated 90°C
- Available with NEMA hole sizes and spacing

| Part Number  | Copper Conductor Size Range | Stud Hole Size (In.) | Stud Hole Spacing (In.) | Hex Key Size (In.) | Figure Dimensions (In.) |      |      |     |      | Tightening Torque (In.-Lbs.) | Std. Pkg. Qty. |

## **UL LISTED** Two-Hole, Straight Tongue, Two-Barrel Lug

**For Use with Copper Code Conductors**

### Type H2L-2N

- Allows for termination of two copper conductors
- Cast from high strength corrosion resistant copper alloy to provide premium electrical and mechanical performance
- Wide wire range-taking capability minimizes inventory requirements
- Internal pressure plate provides uniform clamping force on conductor for premium electrical performance
- Internal barrel serrations provide premium wire pull-out strength
- Inspection window to visually assure full conductor insertion
- Flat bottom allows for complete contact with mounting surface
- UL Listed for use up to 600 V and temperature rated 90°C
- Available with NEMA hole sizes and spacing

| Part Number  | Copper Conductor Size Range | Stud Hole Size (In.) | Stud Hole Spacing (In.) | Hex Key Size (In.) | Figure Dimensions (In.) |      |      |     |      | Tightening Torque (In.-Lbs.) | Std. Pkg. Qty. |
|--------------|-----------------------------|----------------------|-------------------------|--------------------|-------------------------|------|------|-----|------|------------------------------|----------------|
|              |                             |                      |                         |                    | L                       | W    | H    | T   | P    |                              |                |

## Two-Set Screw Splice

For Use with Copper Code Conductors

### Type PNLC

- Cast from high strength corrosion resistant copper alloy to provide premium electrical and mechanical performance
- Wide wire range-taking capability minimizes inventory requirements
- Plated steel set screw provides high strength, durable electrical contact between conductor and connector
- Internal wire stops to prevent over-insertion of conductor
- For use up to 600 V and temperature rated 90°C

| Part Number | Copper Conductor Size Range | Hex Key Size (In.) | Figure Dimensions (In.) |      |      | Tightening Torque (In.-Lbs.) | Std. Pkg. Qty. |
|-------------|-----------------------------|--------------------|-------------------------|------|------|------------------------------|----------------|
|             |                             |                    | L                       | W    | H    |                              |                |
| PNLC-1/0-3  | #8 SOL – 1/0 STR            | 1/4                | 1.63                    | .72  | .84  | 200                          | 3              |
| PNLC-250-1  | #6 SOL – 250 kcmil          | 3/8                | 2.13                    | .97  | 1.06 | 375                          | 1              |
| PNLC-500-1  | #4 SOL – 500 kcmil          | 3/8                | 3.00                    | 1.38 | 1.47 | 375                          | 1              |

## Two-Set Screw Splice with Internal Pressure Plate

For Use with Copper Code Conductors

### Type HC

- Cast from high strength corrosion resistant copper alloy to provide premium electrical and mechanical performance
- Wide wire range-taking capability minimizes inventory requirements
- Internal pressure plate provides uniform clamping force on conductor for premium electrical performance
- Internal barrel serrations provide premium wire pull-out strength
- Internal wire stops to prevent over-insertion of conductor
- UL Listed for use up to 600 V and temperature rated 90°C

| Part Number | Copper Conductor Size Range | Hex Key Size (In.) | Figure Dimensions (In) |      |      | Tightening Torque (In.-Lbs.) | Std. Pkg. Qty. |
|-------------|-----------------------------|--------------------|------------------------|------|------|------------------------------|----------------|
|             |                             |                    | L                      | W    | H    |                              |                |
| HC4-3*      | #8 SOL – #4 STR             | **                 | 1.25                   | .50  | .56  | 35                           | 3              |
| HC8-3*      | #4 SOL – #1 STR             | 7/16               | 1.75                   | .69  | .81  | 100                          | 3              |
| HC13-3      | #1 STR – 2/0 STR            | 9/16               | 2.00                   | .81  | .94  | 250                          | 3              |
| HC21-1      | 2/0 STR – 4/0 STR           | 9/16               | 2.25                   | 1.00 | 1.19 | 250                          | 1              |
| HC30-1      | 4/0 STR – 300 kcmil         | 5/8                | 2.56                   | 1.19 | 1.44 | 350                          | 1              |
| HC50-1      | 300 kcmil – 500 kcmil       | 3/4                | 3.00                   | 1.38 | 1.63 | 480                          | 1              |

\*Includes swivel screws, not internal pressure plate.

\*\*Uses slotted head set screw.

\*\*Uses slotted head set screw.

‡‡Not UL Listed or CSA Certified.

## One-Hole, Straight Floating Tongue Lug

For Use with Stranded Copper Code Conductors

### Type CS

- Made from high strength electrolytic copper to provide premium electrical and mechanical performance
- Wide wire range-taking capability minimizes inventory requirements
- Internal pressure bar and V-bottom collar provide uniform clamping force on conductor to assure positive contact between conductor and connector
- Inspection window to visually assure full conductor insertion
- Plated steel set screw provides high strength, durable electrical contact between conductor and connector
- UL Listed and CSA Certified for use up to 600 V

| Part Number | Copper Conductor Size Range  | Current Rating (Amps) | Stud Hole Size (In.) | Hex Size (In.) | Figure Dimensions (In.) |      |      |     |      |      | Tightening Torque (In.-Lbs.) | Std. Pkg. Qty. |

## Two-Hole, Straight Floating Tongue Lug

**For Use with Stranded Copper Code Conductors**

### Type CD

- Made from high strength electrolytic copper to provide premium electrical and mechanical performance
- Wide wire range-taking capability minimizes inventory requirements
- Internal pressure bar and V-bottom collar provide uniform clamping force on conductor to assure positive contact between conductor and connector
- Inspection window to visually assure full conductor insertion
- Plated steel set screw provides high strength, durable electrical contact between conductor and connector
- UL Listed and CSA Certified for use up to 600 V
- Available with NEMA hole sizes and spacing

## UL LISTED CERTIFIED One-Hole, Offset Floating Tongue, Two-Barrel Lug

For Use with Stranded Copper Code Conductors

### Type DC

- Dual barrel provides termination of two copper conductors
- Made from high strength electrolytic copper to provide premium electrical and mechanical performance
- Wide wire range-taking capability minimizes inventory requirements
- Internal pressure bar and V-bottom collar provide uniform clamping force on conductor to assure positive contact between conductor and connector

- Inspection window to visually assure full conductor insertion
- Plated steel set screw provides high strength, durable electrical contact between conductor and connector
- UL Listed and CSA Certified for use up to 600 V

The use of PANDUIT oxide inhibiting joint compound (CMP-100) is recommended for pad to pad and conductor connections. See page D2.161.

\*Listed torque values are for maximum conductor sizes, consult the installation instruction sheet for smaller sizes.

\*\*Uses slotted head set screw.

\*\*\*Accommodates two conductors for conductor range 1/0 AWG – 250 kcmil.

A. System Overview

## Two-Hole, Single Barrel Lug

**For Use with Stranded Aluminum or Copper Code Conductors**

B1. Cable Ties

### Type LAMB

- Made from high strength, extruded aluminum alloy to provide premium electrical and mechanical performance
- Tin-plated to inhibit corrosion
- Compact design saves space
- Wide wire range-taking capability minimizes inventory requirements
- Inspection window to visually assure full conductor insertion

- Plated steel or aluminum set screw provides high strength, durable electrical contact between conductor and connector
- LAMLB provided with dual set screws for premium clamping of conductor to connector for heavy duty applications
- UL Listed and CSA Certified for use up to 600 V and UL temperature rated 90°C
- Available with NEMA hole sizes and spacing

|                |                      |                      |                    | L                       | W    | H1   | H2   | T   | P    |                              |                |
| LAM2SA300-56-3 | #6 AWG – 300 kcmil   | 5/16                 | 5/16               | 3.00                    | 1.00 | 2.00 | 1.25 | .50 | 1.00 | 375*                         | 3              |

The use of PANDUIT oxide inhibiting joint compound (CMP-100) is recommended for pad to pad and conductor connections. See page D2.161.  
\*Listed torque values are for maximum conductor sizes, consult the installation instruction sheet for smaller sizes.

## Two-Hole, Two-Barrel Lug

For Use with Stranded Aluminum or Copper Code Conductors

### Type LAM2B

- Dual barrel provides termination of two conductors
- Made from high strength, extruded aluminum alloy to provide premium electrical and mechanical performance
- Tin-plated to inhibit corrosion
- Wide wire range-taking capability minimizes inventory requirements
- Inspection window to visually assure full conductor insertion

- Plated steel or aluminum set screw provides high strength, durable electrical contact between conductor and connector
- LAM2LB connector provided with dual set screws for premium clamping of conductor to connector for heavy duty applications
- UL Listed for use up to 600 V and temperature rated 90°C
- Available with NEMA hole sizes and spacing

## Two-Hole, Vertical Three-Barrel Lug

For Use with Stranded Aluminum or Copper Code Conductors

### Type LAM3SB

- Triple barrel provides termination of three conductors
- Vertical configuration saves space
- Made from high strength, extruded aluminum alloy to provide premium electrical and mechanical performance
- Tin-plated to inhibit corrosion

- Wide wire range-taking capability minimizes inventory requirements
- Inspection window to visually assure full conductor insertion
- Plated steel or aluminum set screw provides high strength, durable electrical contact between conductor and connector
- UL Listed and CSA Certified for use up to 600 V and UL temperature rated 90°C

| Part Number     | Conductor Size Range | Stud Hole Size (In.) | Stud Hole Spacing (In.) | Hex Key Size (In.) | Figure Dimensions (In.) |      |      |      |     |      | Tightening Torque (In.-Lbs.) | Std. Pkg. Qty. |

The use of PANDUIT oxide inhibiting joint compound (CMP-100) is recommended for pad to pad and conductor connections. See page D2.161.

## Four-Hole, Three-Barrel Lug

For Use with Stranded Aluminum or Copper Code Conductors

### Type LAM3D

- Triple barrel provides termination of three conductors
- Made from high strength, extruded aluminum alloy to provide premium electrical and mechanical performance
- Tin-plated to inhibit corrosion
- Wide wire range-taking capability minimizes inventory requirements
- Inspection window to visually assure full conductor insertion

- Plated steel or aluminum set screw provides high strength, durable electrical contact between conductor and connector
- LAM3LD connector is provided with dual set screws to allow premium clamping of conductor to connector for heavy duty applications
- For use up to 600 V and temperature rated 90°C
- Available with NEMA hole sizes and spacing

A. System Overview

## Two-Hole, Vertical Four-Barrel Lug

**For Use with Stranded Aluminum or Copper Code Conductors**

B1. Cable Ties

### Type LAM4SB

- Four barrels provide termination of four conductors
- Vertical configuration saves space
- Made from high strength, extruded aluminum alloy to provide premium electrical and mechanical performance
- Tin-plated to inhibit corrosion
- Wide wire range-taking capability minimizes inventory requirements
- Inspection window to visually assure full conductor insertion
- Plated steel or aluminum set screw provides high strength, durable electrical contact between conductor and connector
- UL Listed and CSA Certified for use up to 600 V and UL temperature rated 90°C

## Four-Hole, Four-Barrel Lug

**For Use with Stranded Aluminum or Copper Code Conductors**

D1. Terminals

### Type LAM4D

- Four barrels provide termination of four conductors
- Made from high strength, extruded aluminum alloy to provide premium electrical and mechanical performance
- Tin-plated to inhibit corrosion
- Wide wire range-taking capability minimizes inventory requirements
- Inspection window to visually assure full conductor insertion
- Plated steel or aluminum set screw provides high strength, durable electrical contact between conductor and connector
- LAM4LD connector is provided with dual set screws to allow premium clamping of conductor to connector for heavy duty applications
- For use up to 600 V and temperature rated 90°C
- Available with NEMA hole sizes and spacing

The use of PANDUIT oxide inhibiting joint compound (CMP-100) is recommended for pad to pad and conductor connections. See page D2.161.

\*Listed torque values are for maximum conductor sizes, consult the installation instruction sheet for smaller sizes.

◆NEMA hole sizes and spacing.

## Transformer Lug Kit

**For Use with Stranded Aluminum or Copper Code Conductors**

### Type KLM

- Kits include all of the connectors and hardware to make a complete transformer connection in a single convenient package
- Lugs are made from high strength, extruded aluminum alloy and are tin-plated to inhibit corrosion and oxidation
- Plated steel cap screws, belleville and flat washers, and hex nuts are provided to assure that terminal to bus connections are made using proper hardware resulting in true torque to pressure performance

- Hardware is packaged in a sealed plastic bag to prevent lost hardware prior to installation
- KLM6-800 and KLM350-800 kits include lugs that accommodate 750 kcmil conductors used with large transformers
- Lugs are UL Listed and CSA Certified for use up to 600 V and UL temperature rated 90°C

## Multi-Tap Connector with Clear Insulation, Single-Sided

For Use with Aluminum or Copper Code Conductors

### Type PCSB-S

- Flexible design – can be used as a tap, splice, or dead end connector
- Body made from high strength, extruded aluminum alloy to provide premium electrical and mechanical performance
- Insulated with clear PVC to eliminate the need for taping and allow for visual inspection of the complete conductor insertion
- Each port pre-filled with oxide inhibiting joint compound seals out air and moisture to deter surface oxidation
- Wide wire range-taking capability minimizes inventory requirements
- Plated steel or aluminum set screw provides high strength, durable electrical contact between conductor and connector
- UL Listed and CSA Certified for use up to 600 V and temperature rated 90°C

| Part Number    | Conductor Size Range    | No. of Ports            | Figure Dimensions (In.) |      |      |      | Hex Key Size (In.) | Tightening Torque (In.-Lbs.) | Std. Pkg. Qty. |   |

A. System Overview

## Multi-Tap Connector with Clear Insulation, Double-Sided

**For Use with Aluminum or Copper Code Conductors**

B1. Cable Ties

### Type PCSB

- Flexible design – can be used as a tap, splice, or dead end connector
- Body made from high strength, extruded aluminum alloy to provide premium electrical and mechanical performance
- Insulated with clear PVC to eliminate the need for taping and allow for visual inspection of the complete conductor insertion
- Each port pre-filled with oxide inhibiting joint compound seals out air and moisture to deter surface oxidation

- Wide wire range-taking capability minimizes inventory requirements
- Dual-sided entry allows offset and opposite entry for primary and secondary conductors
- Plated steel or aluminum set screw provides high strength, durable electrical contact between conductor and connector
- UL Listed and CSA Certified for use up to 600 V and temperature rated 90°C

## In-Line Splicer/Reducer with Clear Insulation

B1.  
Cable Ties

**For Use with Aluminum or Copper Code Conductors**

### Type PISR

- Flexible design – can be used as a splice or reducer
- Dual rated for use with copper or aluminum conductors
- Made from high strength, extruded aluminum alloy to provide premium electrical and mechanical performance
- Insulated with clear PVC to eliminate the need for taping and allow for visual inspection of the complete conductor insertion
- Each port pre-filled with oxide inhibiting joint compound seals out air and moisture to deter surface oxidation
- Wide wire range-taking capability minimizes inventory requirements
- Plated steel or aluminum set screw provides high strength, durable electrical contact between conductor and connector
- UL Listed and CSA Certified for use up to 600 V and UL temperature rated 90°C

## Multi-Tap Connector with Clear Insulation, Single-Sided, with Mounting Holes

For Use with Aluminum or Copper Code Conductors

### Type PCSBMT-S

- Flexible design – can be used as a tap, splice, or dead end connector
- Body made from high strength, extruded aluminum alloy to provide premium electrical and mechanical performance
- Two isolated mounting holes at either end of connector facilitate direct mounting using 1/4" bolts
- Insulated with clear PVC to eliminate the need for taping and allow for visual inspection of the complete conductor insertion

- Each port pre-filled with oxide inhibiting joint compound seals out air and moisture to deter surface oxidation
- Wide wire range-taking capability minimizes inventory requirements
- Plated steel or aluminum set screw provides high strength, durable electrical contact between conductor and connector
- UL Listed and CSA Certified for use up to 600 V and temperature rated 90°C

System  
Overview

## Multi-Tap Connector with Clear Insulation, Double-Sided, with Mounting Holes

**For Use with Aluminum or Copper Code Conductors**

B1.  
Cable Ties

### Type PCSBMT

- Flexible design – can be used as a tap, splice, or dead end connector
- Body made from high strength, extruded aluminum alloy to provide premium electrical and mechanical performance
- Two isolated mounting holes at either end of connector facilitate direct mounting using 1/4" bolts
- Insulated with clear PVC to eliminate the need for taping and allow for visual inspection of the complete conductor insertion

- Each port pre-filled with oxide inhibiting joint compound seals out air and moisture to deter surface oxidation
- Wide wire range-taking capability minimizes inventory requirements
- Dual-sided entry allows offset and opposite entry for primary and secondary conductors
- Plated steel or aluminum set screw provides high strength, durable electrical contact between conductor and connector
- UL Listed and CSA Certified for use up to 600 V and temperature rated 90°C

## Belleville Compression Washers

### Type CW

- Conical spring washer for use when assembling aluminum connectors to copper and/or steel pads, compensates for differing rates of thermal expansion to keep hardware assembly from loosening
- For assembly information, see page D2.162
- Made from hardened steel to provide high strength
- Cadmium-plated to inhibit corrosion

## Joint Compounds

### For Use with Aluminum Connectors

#### Type CMP

- Oxide inhibitor for compression conductor connections lowers electrical resistance of compression joint while sealing out air and moisture to prevent the formation of surface oxides
- Wide operating temperature range; can be used in a wide range of electrical and environmental conditions
- Packaged in convenient dispenser bottles

| Part Number | Description  | Std. Pkg. Qty. |
|-------------|--|----------------|
| CMP-100-1   | Contact aid for pad-to-pad or thread-to-thread aluminum connections, 8 oz. Operating temperature range -60°F (-51°C) to 400°F (204°C). | 1              |

## Guidelines for Installing Aluminum Mechanical Connectors

B1.  
Cable Ties

### 1. Select the correct connector for your application.

- Always use an aluminum conductor with an aluminum connector
- Verify that the connector is marked for the conductor size and type that you are using

B2.  
Cable  
Accessories

B3.  
Stainless  
Steel Ties

C1.  
Wiring  
Duct

### 2. Remove the insulation from insulated cable.

- See page D3.34 for *PANDUIT* cable stripping tools
- Use care to avoid nicking the conductor strands
- Strip the insulation to the proper length as listed in the installation instructions provided with *PANDUIT* connectors

Surface  
Raceway

C3.  
Abrasion  
Protection

C4.  
Cable  
Management

### 3. Clean the exposed conductor using a wire brush or an emery cloth.

- In a similar manner, clean an unplated connector pad and the surface to which the connector will be attached
- Solvent should be used to clean plated parts that are dirty, but the plating should never be disturbed with abrasives

Terminals

D2.  
Power  
Connectors

D3.  
Grounding  
Connectors

### 4. Apply *PANDUIT* joint compound to the clean conductor for mechanical connector applications (see pages D2.161).

- Joint compound will deter the formation of surface oxides after installation
- Aluminum compression connectors and insulated mechanical connectors are pre-filled with joint compound

Tagout/  
& Safety  
Solutions

### 5. Insert the conductor into the connector and:

- For mechanical connectors, tighten the screws to the recommended torque values
- For compression connectors, use the recommended die and crimping tool to make the proper compression connection

## Conductor Sizes (continued)

### Copper Solid Conductor Sizes

| Solid Copper Conductor Size AWG or kcmil | Conductor Diameter (In.) |
|--|--------------------------|
| #18                                      | .040                     |
| #17                                      | .045                     |
| #16                                      | .050                     |
| #15                                      | .057                     |
| #14                                      | .064                     |
| #13                                      | .071                     |
| #12                                      | .080                     |
| #11                                      | .090                     |
| #10                                      | .101                     |
| #9                                       | .114                     |
| #8                                       | .128                     |
| #7                                       | .128                     |
| #6                                       | .162                     |
| #5                                       | .181                     |
| #4                                       | .204                     |
| #3                                       | .229                     |
| #2                                       | .257                     |
| #1                                       | .289                     |
| 1/0                                      | .324                     |
| 2/0                                      | .364                     |
| 3/0                                      | .409                     |
| 4/0                                      | .460                     |

### Aluminum Concentric Stranded Conductor Sizes

| Class B Aluminum Concentric AWG or kcmil | Number of Strands | Diameter of each Strand (Mils) |
|--|-------------------|--------------------------------|
| #8                                       | 7                 | 48.6                           |
| #7                                       | 7                 | 54.5                           |
| #6                                       | 7                 | 61.2                           |
| #5                                       | 7                 | 68.8                           |
| #4                                       | 7                 | 77.2                           |
| #3                                       | 7                 | 86.7                           |
| #2                                       | 7                 | 97.4                           |
| #1                                       | 19                | 66.4                           |
| 1/0                                      | 19                | 74.5                           |
| 2/0                                      | 19                | 83.7                           |
| 3/0                                      | 19                | 94.0                           |
| 4/0                                      | 19                | 105.5                          |
| 250                                      | 37                | 82.2                           |
| 300                                      | 37                | 90.0                           |
| 350                                      | 37                | 97.3                           |
| 400                                      | 37                | 104.0                          |
| 450                                      | 37                | 110.3                          |
| 500                                      | 37                | 116.2                          |
| 550                                      | 61                | 95.0                           |
| 600                                      | 61                | 99.2                           |
| 650                                      | 61                | 103.2                          |
| 700                                      | 61                | 107.1                          |
| 750                                      | 61                | 110.9                          |
| 800                                      | 61                | 114.5                          |
| 900                                      | 61                | 121.5                          |
| 1000                                     | 61                | 128.0                          |

### Aluminum Compact Stranded Conductor Sizes

| Compact Aluminum AWG or kcmil | Class ASTM B400 | Number of Strands | Conductor Diameter (In.) |
|-------------------------------|-----------------|-------------------|--------------------------|
| #8                            | A, B            | 7                 | .134                     |
| #6                            | A, B            | 7                 | .169                     |
| #4                            | A, B            | 7                 | .213                     |
| #3                            | A, B            | 7                 | .238                     |
| #2                            | AA, A, B        | 7                 | .268                     |
| #1                            | AA, A           | 7                 | .299                     |
| #1                            | B               | 19                | .299                     |
| 1/0                           | AA, A           | 7                 | .336                     |
| 1/0                           | B               | 19                | .336                     |
| 2/0                           | AA, A           | 7                 | .376                     |
| 2/0                           | B               | 19                | .376                     |
| 3/0                           | AA, A           | 7                 | .423                     |
| 3/0                           | B               | 19                | .423                     |
| 4/0                           | AA, A           | 7                 | .475                     |
| 4/0                           | B               | 19                | .475                     |
| 250                           | AA              | 7                 | .520                     |
| 250                           | A               | 19                | .520                     |
| 250                           | B               | 37                | .520                     |
| 266                           | AA              | 7                 | .337                     |
| 266                           | A               | 19                | .337                     |
| 300                           | AA              | 7                 | .570                     |
| 300                           | A               | 19                | .570                     |

\*Strandings required for UL and CSA Certification testing.

This chart details the different conductors commonly used in the industry. For each size, either AWG or Metric, various stranding options are listed. Typically the higher stranding is used in applications requiring greater conductor flexibility.

| AWG to Metric Wire Crosses |                           |
|----------------------------|---------------------------|
| AWG                        | Metric (mm <sup>2</sup> ) |
| 26 – 22                    | 0.1 – 0.5                 |
| 22 – 18                    | 0.5 – 1.0                 |
| 16 – 14                    | 1.5 – 2.5                 |
| 12 – 10                    | 4.0 – 6.0                 |

## Common Conductor Sizes and Strandings Reference Chart (continued)

| Conductor |                        | Individual Strands |          |        | Overall Conductor Size |       |            | Conductor  |                        | Individual Strands |          |        | Overall Conductor Size |       |              |
|-----------|------------------------|--------------------|----------|--------|------------------------|-------|------------|------------|------------------------|--------------------|----------|--------|------------------------|-------|--------------|

## STRUCTUREDGROUND™ GROUNDING CONNECTORS

PANDUIT® STRUCTUREDGROUND™ Grounding Connectors provide innovative solutions for joining ground conductors to water pipe, ground rods, rebar, conduit, iron pipe and structural steel. Designed with the needs of the end user in mind, STRUCTUREDGROUND™ Grounding Connectors feature easy installation, lowest installed cost, and long-term reliability.

- Functional product information is marked directly on the connector, facilitating the identification, ordering, and usage of the grounding connector
- Compression connectors are color-coded to facilitate quick identification of the proper crimping die
- Mechanical connectors are designed for easy installation – no special tools required
- Incorporate wide wire range-taking capability to minimize inventory requirements
- Made from high strength, high conductivity electrolytic copper and aluminum alloy materials to provide optimum connectivity for both power and grounding applications
- Wide assortment of manual, controlled cycle, battery operated hydraulic and pneumatic crimping tools for reliable connections at the lowest installed cost

PANDUIT® STRUCTUREDGROUND™ Grounding Connectors are designed for use with many different code and flex conductor types and are available in a broad range of styles and sizes. A full line of manual, controlled cycle, and battery operated hydraulic crimping tools meet application needs and provide lowest installed cost. PANDUIT offers a wide variety of STRUCTUREDGROUND™ Grounding Connectors to meet customer needs and today's application requirements.

### Copper HTAPs

Easy-to-read, color-coded die index number for PANDUIT crimping dies, legible after crimping, for selection

Conductor sizes for each tap pocket marked on part

Part number and agency listings marked on part for easy identification

Slotted design to reduce installation time when used with PANDUIT cable ties (included)

Made from high conductivity copper and electro tin-plated to inhibit corrosion

### Clear Covers for Copper HTAPs

Optically clear to allow 360° inspections

Made from high impact strength self-extinguishing plastic with UL94V-0 flammability rating and minimum oxygen index of 28

Built-in flanges retain HTAP in cover  
Easy to assemble snap-on design

Molded in flash barriers protect against electrical flash over

Retainer clips to hold labels inside cover\*. Retainer clips have a write-on surface for manual marking

Corresponding PANDUIT HTAP part number, voltage rating, and temperature rating molded into cover half for easy identification

Low profile design minimizes space requirements

Flexible fingers closely conform to conductor preventing foreign objects from entering cover

\*Labels shown printed with PANDUIT® PANTHER™ LS8E Printer. See page E1.8.

### Thin Wall Copper CTAPs

Part number and conductor size marked on part for easy identification

Color-coded for proper crimp die selection

Ribbed design provides high strength

Made from high conductivity wrought copper

### Heavy Duty Copper CTAPs

Easy-to-read die index number for selection

Made from heavy wall, extruded, high conductivity copper; provides high strength and premium electrical properties

Part number and conductor size marked on part for easy identification

### Access Floor Grounding Clamp

Each part accommodates a wide range of copper conductor sizes – minimizes inventory

Made from high strength cast bronze

Hinged U-bolt bonds to the pedestal with a single bolt to simplify installation

Quad bolt bonds perpendicular MCBN conductors

Bonds to both square and round access floor pedestals

## Service Entrance Grounding Roadmap

- Complies with J-STD-607-A and IEEE Std 1100 (IEEE Emerald Book)
- Grounding Equalizer (GE) is required when two or more Telecommunications Bonding Backbones (TBB) are used within a multi-story building; bond TBBs together with a GE at the top floor and at a minimum of every third floor in between

- Bonds mesh common bonding network (MCBN) conductors to each other and bonds the access floor pedestals to the conductors
- Made with stainless steel hardware to eliminate zinc whiskers which can dislodge and enter equipment, causing shorts
- Specifically designed to bond perpendicular MCBN conductors per TIA-942

- Bonds to the pedestal with a single bolt to simplify installation
- Accommodates conductors from #6 – 1/0 AWG, minimizes inventory requirements
- Bonds round and square access floor pedestals for greater flexibility

## cUL<sup>us</sup> BICSI/J-STD-607-A Telecommunications Grounding Busbars

### Type GB

- Meets BICSI and J-STD-607-A requirements for network systems grounding applications
- Made of high conductivity copper and tin-plated to inhibit corrosion
- Comes pre-assembled with brackets and insulators attached for quick installation
- Use *PANDUIT* self-laminating laser/ink jet labels to identify busbars to meet TIA/EIA-606-A, see chart below

TGB

For complete labeling solutions and product information, reference charts on pages E1.1 – E2.30.

## Telecommunications Grounding and Bonding Conductor Label Kit

- Meets labeling requirements of J-STD-607-A; each telecommunications grounding and bonding conductor shall be labeled as close as practicable to its point of termination in a readable position
- Can be applied as a wrap-around marker (parallel to cable) or flag marker (45° or 90°) to cable
- Kit includes everything needed to properly label cables; ten flame retardant cable ties and ten rigid plastic yellow tags printed with "IF THIS CONNECTOR OR CABLE IS LOOSE OR MUST BE REMOVED, PLEASE CALL THE BUILDING TELECOMMUNICATIONS MANAGER."

**UL US** **CSA CERTIFIED** **Code Conductor, Thin Wall, CTAP**

B1. Cable Ties

**For Copper Code Stranded Connections**

**Type CTAPF**

- For copper-to-copper tapping, splicing, or pigtailing
- Wide wire range-taking capability minimizes inventory requirements
- Color-coded for proper crimp die selection
- Ribbed design provides high strength

- Made from high conductivity wrought copper
- UL Listed and CSA Certified to 600 V and temperature rated to 90°C when crimped with *PANDUIT* and specified competitor crimping tools and dies<sup>^</sup>

See pages D3.88 and D3.89 for tool and die information.  
 \*CTAPF10-16-C available with square, not flared ends.  
 All parts available in tin-plated; add TP before packaging code – example: CTAPF6-12TP-C.  
<sup>^</sup>Note: CTAPF parts are UL Listed and CSA Certified with AWG wire only.

**UL LISTED** Code Conductor, Heavy Duty, CTAP

**For Use with Solid and Stranded Copper Code Conductors**

### Type CTAP

- For tapping into unbroken continuous main, as a wire joint or two-way splice
- Wide wire range-taking capability minimizes inventory requirements
- Made from heavy wall, extruded, high conductivity copper; provides high strength and premium electrical properties

- UL Listed per UL 467 for use up to 35 KV\*\* and temperature rated 90°C when crimped with *PANDUIT* and specified competitor crimping tools and dies
- UL Listed for grounding and bonding suitable for direct burial in earth or concrete when crimped with *PANDUIT* and specified competitor crimping tools and dies<sup>^</sup>

A. System Overview

## Clear Covers for HTCT HTAPs

B1. Cable Ties

**For Use with PANDUIT HTCT HTAPs**

### Type CLRCVR

B2. Cable Accessories

- Made of high impact plastic to provide high impact strength and 360° inspections of crimped connection to assure the crimp is complete and the correct die was used
- Incorporate dual self-latching spring loaded latches and supplied with two PANDUIT UL 94V-0 cable ties to allow for easy snap-on assembly and ensure covers are secured
- Low profile design minimizes space requirements
- Each cover half supports installation information labels inside plastic retainer strips to allow labels to be viewed on either side of cover and to protect labels from being removed

- Incorporate molded in flash barriers which encompass the HTAP installation providing protection against electrical flash over
- UL 94V-0 flame rating and oxygen index of 28 providing self-extinguishing, flame retardant properties
- Part number, voltage rating, temperature rating and HTCT part number molded into cover for easy identification
- See page D3.29 for detailed installation instructions

## Black Covers for Copper CTAPs and Aluminum HTAPs

**Protect CTAP or HTAP connection from environment and act as insulation**

### Type TAPC

E1. Labeling Systems

- Used to insulate connectors and protect tap connections from corrosive environments
- Made of durable, weather-resistant black polypropylene

- Double locking latches provide secure cover installation
- Flexible molded fingers at end of covers conform to conductor and prevent foreign objects from contacting connector

E2. Labels

E3. Pre-Printed & Write-On Markers

For information on aluminum HTAPs, see page D2.122.

**UL LISTED** **CSA CERTIFIED** **Code/Flex Conductor HTAP**

**For Making Parallel and Multiple Tap Connections on Code and Flex Conductors**

### Type HTCT

- Used to tap into continuous conductors as a splice or pigtailling
- Each HTAP terminates a wide range of conductor sizes and combinations of code and flex conductors Class G, H, I and Diesel Locomotive to suit a variety of applications
- Slotted design allows quick and easy assembly of conductor to HTAP using three *PANDUIT* 94V-0 cable ties included
- Tap grooves are separated from one another allowing them to function independently so HTAP can be used with a single or multiple taps providing maximum design and installation flexibility
- Color-coded and marked with *PANDUIT* die index numbers for proper crimp die selection
- UL Listed and CSA Certified for applications up to 600 V when crimped with *PANDUIT* and specified competitor crimping tools and *PANDUIT* crimping dies<sup>†</sup>
- Tin-plated to inhibit corrosion
- See page D3.29 for detailed installation instructions

‡See page D3.87 for tool and die information.  
^Note: HTCT parts are UL Listed and CSA Certified with AWG wire only.

**UL LISTED** **CSA CERTIFIED** **Code/Flex Conductor HTAP Kit**

**Type HTWC**

- Include all components to make a complete HTAP and cover installation: HTCT HTAP, matching CLRCVR clear cover, and cable ties
- Each HTCT HTAP designed to terminate a wide range of copper code and flex conductor combinations to accommodate a variety of applications
- HTAPs incorporate a unique slotted design that allows for quick and easy installation using supplied *PANDUIT* cable ties; saves time and cost

- Matching clear covers are made from high impact plastic and provide high impact strength and 360° viewing of installed HTAP
- Clear covers have a UL 94V-0 flame rating and an oxygen index of 28 providing self-extinguishing, flame retardant properties
- UL Listed and CSA Certified for applications up to 600 V when crimped with *PANDUIT* and specified competitor crimping tools and *PANDUIT* crimping dies
- See page D3.29 for detailed installation instructions

See pages D3.8 – D3.10 for more information on HTAPs and clear covers, including tap sizes and locations.  
Note: HTCT parts are UL Listed and CSA Certified with AWG wire only.

## Features and Benefits – STRUCTUREDGROUND™ Mechanical Connectors

|   |  |
|---|--|
| <h3>Bronze Grounding Clamp</h3>  <p>Made from high strength, electrolytic cast bronze</p> <p>Provides two options: attachment of grounding conductor to clamp either parallel or perpendicular to axis of pipe or ground rod</p> <p>Provided with high strength, corrosion resistant silicon bronze hardware</p> <p>Part number, conductor range, rod and pipe size range and "DB" suitable for direct burial marked on part for easy identification</p> <p><b>UL LISTED</b></p> | <h3>Bronze Service Post Connector</h3>  <p>Part number, conductor range, and "DB" suitable for direct burial marked on part for easy identification</p> <p>Made from a single piece of hard drawn copper electrolytic rod – provides high strength</p> <p>Provided with high strength, corrosion resistant silicon bronze nut and pressure pad</p> <p>Available in configurations for use with one or two copper conductors with either a standard or long stud length</p> <p><b>UL US LISTED</b></p> |
| <h3>Bronze Water Pipe Clamp</h3>  <p>Part number, conductor range, water pipe size range and "DB" suitable for direct burial marked on part for easy identification</p> <p>Provided with high strength steel hardware plated to inhibit corrosion</p> <p>Made from high strength, electrolytic cast bronze</p> <p>Each part accommodates a wide range of copper conductor sizes and water pipe sizes – minimizes inventory</p> <p><b>UL LISTED</b> <b>CSA CERTIFIED</b></p>    | <h3>Bronze Grounding Clamp</h3>  <p>Provided with high strength, corrosion resistant silicon bronze hardware</p> <p>Part number, conductor range, and "DB" suitable for direct burial marked on part for easy identification</p> <p>Made from high strength, electrolytic cast bronze</p> <p>Spacer separates conductor from mounting surface</p> <p><b>UL LISTED</b></p>  |

### Aluminum Lay-In Lug

High-density aluminum alloy with tin-plating provides premium electrical and mechanical performance for long-term dependability

Wide wire range-taking supports multiple wires sizes minimizing inventory requirements with minimum parts

UL Listed and CSA Certified for use up to 600 V and UL temperature rated 90°C ensure a high level of safety and reliability

## Service Post Connector, Male Stud, Single Conductor, Bronze

### Type SP1

- For grounding one copper code conductor to steel structures, busbars, or transformers or for tapping from busbar with hex nut and washer
- Made from high copper content, hard drawn copper rod provides high strength
- Offered with standard and long stud lengths to accommodate a variety of mounting applications
- Wide wire range-taking capability minimizes inventory requirements
- True hex design for body and nut hex provides correct fit with socket, box, or open end wrenches resulting in proper torquing of electrical connection
- Pressure bar provides secure connection on a full range of conductor combinations used with each connector providing premium wire pull-out strength
- UL Listed for grounding and bonding and suitable for direct burial in earth or concrete

## Service Post Connector, Female Thread, Single Conductor, Bronze

### Type SPF1

- For grounding one copper code conductor to steel structures, busbars, or transformers or for tapping from busbar using external studs, screws, or bolts
- Made from high copper content, hard drawn copper rod provides high strength
- Wide wire range-taking capability minimizes inventory requirements
- True hex design for body and nut hex provides correct fit with socket, box, or open end wrenches resulting in proper torquing of electrical connection
- Pressure bar provides secure connection on a full range of conductor combinations used with each connector providing premium wire pull-out strength
- UL Listed for grounding and bonding and suitable for direct burial in earth or concrete

## One-Hole Aluminum Lay-In Lug

### Type LI

- Used for quick installation of a continuous grounding conductor
- Made from high strength, extruded aluminum alloy to provide premium electrical and mechanical performance
- Tin-plated to inhibit corrosion
- Wide wire range-taking capability minimizes inventory requirements
- UL Listed and CSA Certified for use up to 600 V and UL temperature rated 90°C

| Part Number | Conductor Size Range | Stud Hole Size In. | Hex Key Size (In.) | Figure Dimensions In. (mm) |               |                | Tightening Torque (In.-Lbs) | Std. Pkg. Qty. |

The use of PANDUIT oxide inhibiting joint compound (CMP) is recommended for pad to pad and conductor connections. See page D3.21.

\*\*Uses slotted head set screw.

## Joint Compounds

### Type CMP

- Oxide inhibitor for compression conductor connections lowers electrical resistance of compression joint while sealing out air and moisture to prevent the formation of surface oxides
- Wide operating temperature range; can be used in a wide range of electrical and environmental conditions
- Packaged in convenient dispenser bottles

| Part Number | Part Description   | Std. Pkg. Qty. |
|-------------|--|----------------|
| CMP-100-1   | Contact aid for pad-to-pad or thread-to-thread aluminum connections, 8 oz. Operating temperature range -60°F (-51°C) to 400°F (204°C).   | 1              |
| CMP-200-1   | Contact aid for cable connections with compression connections made on aluminum conductor, 8 oz. Operating temperature range -40°F (-40°C) to 400°F (204°C). Compatible with all insulating materials.                             | 1              |
| CMP-300-1   | Contact aid for copper-to-copper and copper-to-steel connections, 8 oz. Operating temperature range -40°F (-40°C) to 350°F (177°C). Good for all voltages and suitable for grounding. Also used for anti-seizing thread lubricant. | 1              |
| CMP-300-4-1 | Contact aid for copper-to-copper and copper-to-steel connections, 4 oz. Operating temperature range -40°F (-40°C) to 350°F (177°C). Good for all voltages and suitable for grounding. Also used for anti-seizing thread lubricant. | 1              |

**UL LISTED** Grounding Clamp, U-Bolt, Bronze

**Type GPL**

- Used to ground copper conductor parallel or at a right angle to a rod, tube, or pipe
- Made from high strength, electrolytic cast bronze
- High strength silicon bronze hardware provides long term reliable assembly
- Accommodates a wide range of pipe, tube, rod and conductor sizes – minimizes inventory requirements
- UL Listed for grounding and bonding and suitable for direct burial in earth or concrete

## Grounding Clamp, U-Bolt, for Two Cables, Bronze

### Type GU

- Used to ground two copper code conductors parallel to a rod, tube, or pipe
- Made from high strength, electrolytic cast bronze
- High strength silicon bronze hardware provides long term reliable assembly
- Accommodates a wide range of pipe, tube, rod and conductor sizes – minimizes inventory requirements

| Part Number | Iron Pipe Size (In.) | Conductor Size Range | Figure Dimensions In. (mm) |             |              | Bolt Dia. (In.) | Hex Size (In.) | Tightening Torque (In.-Lbs.) | Std. Pkg. Qty. |

## Grounding Clamp for Water Pipes, Bronze

### Type KP

- Used to ground copper code conductor to water pipe or copper tube
- Cast from high strength, electrolytic bronze to provide reliable grounding connections
- Plated steel screws provide high strength and inhibit corrosion
- Accommodates a wide range of pipe, tube, rod and conductor sizes – minimizes inventory requirements
- UL Listed for grounding and bonding and suitable for direct burial in earth or concrete

| Part Number | Water Pipe Range (In.) | Conductor Size Range | Figure Dimensions In. (mm) |            | Tightening Torque (In.-Lbs.) |       | Std. Pkg. Qty. |

A. System Overview

## Grounding Clamp for Water Pipe with Copper Strap, Bronze

B1. Cable Ties

### Type KLS

- Used to ground copper code conductor to rigid conduit systems
- Cast from high strength, electrolytic bronze to provide reliable grounding connections
- Plated steel screws provide high strength and inhibit corrosion
- Pure copper contact strip included to isolate conduit system from water pipe vibrations
- High strength bronze conduit hub also included to provide durable connection of conduit to copper strap
- Accommodates a wide range of pipe, tube, and conductor sizes – minimizes inventory requirements

B2. Cable Accessories

B3. Stainless Steel Ties

C1. Wiring Duct

C2. Surface Raceway

C3. Abrasion Protection

C4. Cable Management

| Part Number | Conduit Hub Size | Water Pipe Range (In.) | Conductor Size Range | Figure Dimensions In. (mm) |            |               | Tightening Torque (In.-Lbs.) |       | Std. Pkg. Qty. |
|-------------|------------------|------------------------|----------------------|----------------------------|------------|---------------|------------------------------|-------|----------------|

## Grounding Clamp for Conduit, Bronze

D2. Power Connectors

### Type KH

- Used to ground copper code conductor to rigid conduit systems
- Cast from high strength, electrolytic bronze to provide reliable grounding connections
- Plated steel screws provide high strength and inhibit corrosion
- Includes high strength bronze conduit hub to ensure a durable connection of conduit to copper strap
- Accommodates a wide range of pipe, tube, and conductor sizes – minimizes inventory requirements

F. Index

**UL LISTED** **Grounding Clamp for Water Pipes, Aluminum**

**Type GC**

- Dual-rated for grounding aluminum or copper code conductors to copper water pipe, galvanized pipe, or steel conduit
- Made from high strength, extruded aluminum alloy to provide long term durability
- Tin-plated to inhibit corrosion and oxidation and for low contact resistance
- Plated steel screws provide high strength and inhibit corrosion
- Accommodates a wide range of pipe, tube, and conductor sizes – minimizes inventory requirements
- UL Listed for grounding and bonding

| Part Number | Conduit Pipe or Water Tube Size | Conductor Size Range | Figure Dimensions In. (mm) |             | Tightening Torque (In.-Lbs.) |       | Std. Pkg. Qty. |
