## Table of Contents

- ★ Metric *DISCO*™ Male Disconnects, Vinyl Barrel Insulated – Funnel Entry .....D1.138
- ★ Metric Pin Terminals, Vinyl Insulated – Funnel Entry .....D1.138
- ★ Metric Male Blade Adapters, Vinyl Insulated – Funnel Entry .....D1.139
- ★ Metric Butt Splices, Nylon Insulated .....D1.139
  - Features and Benefits – *REEL SMART*™ Ferrules .....D1.140
  - Part Number System for *REEL SMART*™ Ferrules .....D1.140
- ★ Insulated Ferrules on Strips – Single Wire .....D1.141
- ★ Semiautomatic Ferrule Crimping Tool – CT-1000 .....D1.142
- ★ Insulated Ferrules on Reels – Single Wire .....D1.142
- ★ *REEL SMART*™ Ferrule Applicator – CA10 .....D1.143
  - CA9 *EZAIR*™ and CA-800EZ Applicators .....D1.143
- ★ Electric Bench Press .....D1.144
  - Die Sharpening Kits .....D1.144
  - Die Information .....D1.145 – D1.146
  - CA10, CA9 *EZAIR*™, CA-800EZ and CA-800 Applicators Wire Processing Machine
    - Manufacturer/Press Compatibility .....D1.147
    - Performance Requirements .....D1.148

## Power Connectors

- Compression Connector Reference Information .....D2.0
- PAN-LUG*™ Compression Connectors** .....D2.1
  - Features and Benefits – *PAN-LUG*™ Compression Connectors .....D2.2
  - Selection Guide – *PAN-LUG*™ Copper Compression Connectors for Copper Code Conductor .....D2.3
  - Selection Guide – *PAN-LUG*™ Copper Compression Connectors for Copper Code and/or Flex Conductor .....D2.4
  - Selection Guide – *PAN-LUG*™ Aluminum Compression Connectors for Aluminum or Copper Code Conductor .....D2.5
  - Part Number System for Lugs .....D2.6
  - Code Conductor, One-Hole, Short Barrel with Window Lug .....D2.7 – D2.8
  - Code Conductor, One-Hole, Short Barrel with Window Lug, 45° Angle .....D2.9 – D2.10
  - Code Conductor, One-Hole, Short Barrel with Window Lug, 90° Angle .....D2.11 – D2.12
  - Code Conductor, One-Hole, Standard Barrel with Window Lug .....D2.13 – D2.14
  - Code Conductor, One-Hole, Standard Barrel with Window Lug, 45° Angle .....D2.15 – D2.16
  - Code Conductor, One-Hole, Standard Barrel with Window Lug, 90° Angle .....D2.17 – D2.18
  - Code Conductor, One-Hole, Standard Barrel with Window, Narrow Tongue Lug .....D2.19 – D2.20
  - Code Conductor, Short Blank Tongue, Standard Barrel with Window Lug .....D2.21
  - Code Conductor, One-Hole, Long Barrel Lug .....D2.22 – D2.23
  - Code Conductor, One-Hole, Long Barrel Lug, 45° Angle .....D2.24 – D2.25
  - Code Conductor, One-Hole, Long Barrel Lug, 90° Angle .....D2.26 – D2.27
  - Code Conductor, One-Hole, Long Barrel with Window Lug .....D2.28
  - Code Conductor, One-Hole, Long Barrel with Window Lug, 45° Angle .....D2.29
  - Code Conductor, One-Hole, Long Barrel with Window Lug, 90° Angle .....D2.29
  - Code Conductor, One-Hole, Long Barrel with Corona Relief Taper Lug .....D2.30
  - Code Conductor, Two-Hole, Standard Barrel with Window Lug .....D2.31 – D2.32
  - Code Conductor, Two-Hole, Standard Barrel with Window Lug, 45° Angle .....D2.33 – D2.34
  - Code Conductor, Two-Hole, Standard Barrel with Window Lug, 90° Angle .....D2.35 – D2.36
  - Code Conductor, Two-Hole, Standard Barrel with Window, Narrow Tongue Lug .....D2.37
  - Code Conductor, Two-Hole, Standard Barrel with Window, Narrow Tongue Lug, 45° .....D2.38
  - Code Conductor, Two-Hole, Standard Barrel with Window, Narrow Tongue Lug, 90° .....D2.39
  - Code Conductor, Long Blank Tongue, Standard Barrel with Window Lug .....D2.40
  - Code Conductor, Two-Hole, Long Barrel Lug .....D2.41 – D2.42
  - Code Conductor, Two-Hole, Long Barrel Lug, 45° Angle .....D2.43 – D2.44
  - Code Conductor, Two-Hole, Long Barrel Lug, 90° Angle .....D2.45 – D2.46
  - Code Conductor, Two-Hole, Long Barrel with Window Lug .....D2.47 – D2.49
  - Code Conductor, Two-Hole, Long Barrel with Window Lug, 45° Angle .....D2.50 – D2.52
  - Code Conductor, Two-Hole, Long Barrel with Window Lug, 90° Angle .....D2.53 – D2.55
  - Code Conductor, Two-Hole, Long Barrel with Window, Narrow Tongue Lug .....D2.55
  - Code Conductor, Two-Hole, Long Barrel with Corona Relief Taper Lug .....D2.56
  - Code Conductor, Blank Tongue, Long Barrel Lug .....D2.57
  - Code Conductor, Blank Tongue, Long Barrel with Window Lug .....D2.58
  - Code Conductor, Short Barrel, Butt Splice .....D2.59
  - Code Conductor, Standard Barrel, Butt Splice .....D2.60
  - Code Conductor, Long Barrel, Butt Splice .....D2.61
  - Code Conductor, Long Barrel with Corona Relief Taper Splice .....D2.62
  - Code Conductor, Long Barrel, T Splice .....D2.63
  - ★ Code Conductor, Color-Coded Parallel Splice .....D2.64
    - Copper Compression Parallel Splice .....D2.65
    - Flex Conductor, One-Hole, Standard Barrel with Window Lug .....D2.66 – D2.67
    - Flex Conductor, One-Hole, Standard Barrel with Window Lug, 45° Angle .....D2.68 – D2.69
    - Flex Conductor, One-Hole, Standard Barrel with Window Lug, 90° Angle .....D2.70 – D2.71
    - Flex Conductor, One-Hole, Standard Barrel with Window, Narrow Tongue Lug .....D2.72

## SYSTEM OVERVIEW

*PANDUIT* is a global leader in wiring and communication products. Comprehensive solutions include everything necessary to bundle, identify, route, protect and terminate wires/cables. Supporting the most demanding application requirements customers trust *PANDUIT* for:

*PANDUIT* products are developed through continued focus on the needs of the customer and high level of investment in research and development. Solutions are designed for reliability, improved productivity, standards compliance and lowest total cost of ownership.

- Comprehensive, end-to-end solutions
- World-class quality and reliability
- Innovative products and tools
- Unmatched global sales and technical support

## HARNESS SOLUTIONS

PANDUIT is a leading supplier of wire management solutions, helping OEM and CMs achieve their strategic objectives. From complete system solutions that provide the lowest installed cost to new product innovations that meet evolving application challenges, PANDUIT solutions meet a wide range of applications, volumes, and environments in white goods, gaming, vending and transportation.

## CONTRACTOR SOLUTIONS

*PANDUIT* is committed to delivering innovative solutions that meet the needs of electrical and networking installations. Contractors rely on *PANDUIT* solutions for improved productivity, reliability, and safety with lower installed costs. A comprehensive range of products and tooling satisfies the most demanding applications and environments. Contractor programs further support your business needs and benefit the bottom line.

## MRO SOLUTIONS

Maximizing facility uptime while containing maintenance and repair costs is a big challenge facing industrial and manufacturing facilities. Electrical and control systems repair, reconfiguration, and preventative maintenance comprise a substantial portion of the total facility spend. *PANDUIT* solutions deliver best-in-class quality for maximum reliability and defect-free installations, minimizing rework and reducing downtime. The breadth of product lines and materials selection provides extensive application and environment-specific solutions for faster, easier, and more cost-effective maintenance and repair operations (MRO).

## HARSH ENVIRONMENT SOLUTIONS

When vibration, radiation, weathering, corrosion and temperature extremes are a factor, you need a high quality, reliable, and durable solution. *PANDUIT* provides everything necessary to bundle, route, protect, terminate and identify electrical and network cable in indoor and outdoor extreme conditions. These innovative solutions meet the needs of the most demanding harsh and industrial environment applications to deliver long life, increased productivity, and improved worker safety.

## TRANSPORTATION SOLUTIONS

*PANDUIT* develops high-quality products to meet the requirements of the transportation market while providing the lowest installed cost. Performance, reliability, efficiency and availability are critical issues to success. *PANDUIT* solutions are designed to hold up under vibration, shock, and exposure to nature's elements while preventing corrosion, reducing weight, and speeding installation.

## APPLICATION STANDARDS

To help assure optimum quality, *PANDUIT* products are designed and manufactured to meet applicable environmental, safety, market industry and customer standards.

### Restriction of Hazardous Substances (RoHS)

#### RoHS

The European Union (EU) directive on the Restriction of use of certain Hazardous Substances bans the use of six substances in electrical and electronic equipment within the European Economic Community (EEC) after July 1, 2006. The RoHS status of *PANDUIT* Electrical Products, shown in this catalog, can be determined by accessing [www.panduit.com](http://www.panduit.com).

### Underwriters Laboratories, Inc

Underwriters Laboratories, Inc. (UL) is an independent, not-for-profit product-safety testing and certification organization based in the United States. Since its founding in 1894, UL is becoming one of the most recognized, reputable conformity assessment providers in the world. Today, services extend to helping companies achieve global acceptance, whether for an electrical device, a programmable system, or an organization's quality process. Further information on UL marks can be found at [www.ul.com/mark/](http://www.ul.com/mark/).

### Canadian Standards Association

The Canadian Standards Association is a not-for-profit membership based association serving business, industry, government and consumers in Canada and the global marketplace. CSA works in Canada and around the world to develop standards that enhance public safety and health. Additional information can be found at [www.csa.ca](http://www.csa.ca).

### Conformity European

CE marketing is required for certain products sold within the European Union (EU). EU Directives and Norms, specify the requirements for products. Applying the CE mark signifies compliance with those requirements.

### ISO 9001

The International Standards Organization (ISO) establishes worldwide standards for products and services in recognition of increasing globalization of markets. The ISO program establishes the requirements for quality assurance systems. All *PANDUIT* component manufacturing facilities are third party registered to ISO 9001. Registration certificates are available from *PANDUIT*, [www.panduit.com](http://www.panduit.com).

### ISO/TS16949

ISO/TS16949 is a recognized supplier quality standard for the automotive industry. The ISO community of accreditation bodies and registrars considers these additions automotive "interpretations" to the global ISO 9001 standard. Appropriate *PANDUIT* locations are third party registered to this standard. Registration certificates are available from *PANDUIT*, [www.panduit.com](http://www.panduit.com).

### ISO 14001

ISO14001 is a voluntary standard for Environmental Management Systems established by the International Organization for Standardization. The international standard provides a benchmark for continual improvement in environmental performance. Business partners can be confident that *PANDUIT* manufacturing facilities around the globe are engaged in an ongoing process to maximize value while minimizing the impact on natural resources.

### National Electrical Manufacturers Association (NEMA)

NEMA is the largest trade association in the U.S. representing electro-industry manufacturers. NEMA develops industry standards that are in the best interest of the industry and users of its products. NEMA standards for electrical power connector for substations covers uninsulated connectors and busbar supports which are made of metal and intended for use in substations. Included in the standard are manufacturing standards for bolt hole sizes and spacing for terminal connectors with single tangs. *PANDUIT* offers connectors that meet NEMA manufacturing standards and these are specially noted as listed within this catalog.

## APPLICATION STANDARDS (continued)

### Alliance for Telecommunications Industry Solutions (ATIS)

ATIS is a technical planning and standards development organization that is committed to rapidly developing and promoting technical and operations standards for the communications and related information technologies industry worldwide using a pragmatic, flexible, and open approach. Over 1,200 participants from more than 400 communications companies are active in ATIS' 22 industry committees, and its Incubator Solutions Program. Additional information can be found at [www.atis.org](http://www.atis.org).

J-STD-607-A-2002, Commercial Building Grounding (Earthing) and Bonding Requirements for Telecommunications is jointly developed by TIA/EIA and ATIS' technical committee T1E1. This document is available on the ATIS Document Center at [www.atis.org](http://www.atis.org).

Adhering to the grounding principles outlined in J-STD-607-A helps ensure that the telecommunications grounding and bonding system will perform acceptably regardless of the data and voice equipment installed. As stated in J-STD-607-A, the preferred means of connecting conductors to busbars is by using two-hole irreversible compression lugs listed by a nationally recognized testing laboratory (NRTL) such as UL. *PANDUIT PAN-LUG™* Copper Compression Connectors meet these requirements, in all barrel sizes specified by the 607 standard.

### Telecommunications Industry Association (TIA)

The Telecommunications Industry Association is a leading US non-profit trade association serving the communications and information technology industry. TIA represents providers of communications and information technology products and services for the global marketplace through its core competencies in standards development.

ANSI/TIA-942 Telecommunications Infrastructure Standard for Data Centers covers a wide range of facilities issues, including grounding and bonding. It states that electrical continuity is required throughout the rack materials. Adhering to these principles protects network equipment and maintains system performance.

### NEBS Level 3 Approval as Tested by Telcordia Technologies

Telcordia Technologies, formerly known as Bellcore, serves as the testing agency for the Regional Bell Operating Companies. Network Equipment-Building Systems (NEBS) was developed by Bellcore and is currently maintained by Telcordia Technologies. NEBS was developed to standardize requirements for Central Office Equipment and to develop criteria for personal safety, protection of property, and operational continuity.

NEBS Level 3 Criteria is the minimum level of environmental compatibility needed to provide maximum assurance of equipment operability within the network facility environment. The Level 3 criteria is the highest assurance of product operability. Products that meet NEBS Level 3 Criteria are suited for equipment applications which demand minimal service interruptions over the life span of the equipment. *PANDUIT* is the first in the industry to have a system of copper compression lugs and splices (#8 AWG – 1,000 kcmil) and crimping tools physically and rigorously tested by Telcordia Technologies to meet NEBS Level 3 compliance.

### American Bureau of Shipping (ABS)

ABS is a not-for-profit organization that promotes the security of life, property, and the natural environment primarily through the development and verification of standards for the design, construction, and operational maintenance of marine related facilities including: merchant and naval vessels, offshore drilling units, submersibles, FPSOs, etc. *PANDUIT* has ABS Type Approval for select copper compression lugs and splices and are in compliance with ABS 2005 Steel Vessel Rules and can be installed on ABS Type Approved steel vessel machinery, electrical systems, and electrical equipment. *PANDUIT* products that meet ABS Type Approval can be found listed on the ABS website at [www.typeapproval.org](http://www.typeapproval.org).

## PROGRAMS

*PANDUIT* maintains a dedicated global sales force of highly qualified industry experts to provide professional, consultative sales guidance. In addition, *PANDUIT* has partnered with best-in-class contractors and distributors to provide the services and support to deliver comprehensive, reliable solutions at the lowest installed cost.

### Contractor Loyalty Incentive Program (CLIP)

The CLIP program was developed to strengthen relationships and form alliances with valued contractors. Use *PANDUIT* as your preferred vendor for cable ties, terminals, power connectors, identification products, surface raceway, installation tooling and a host of related products, and earn credit towards *PANDUIT* tooling.

Benefits of being a CLIP participant include annual credit incentives, continuous training, potential project leads, and alliance with a global, world-class electrical manufacturer and exclusive promotions.

For more program details, go to [www.panduit.com/clip](http://www.panduit.com/clip) or contact *PANDUIT* Customer Service at 800-777-3300.

### Tooling Partnership Program

The tooling Partnership Program is designed to make low-cost or no cost tooling available to the customer based on qualification and commitment to termination product purchases.

For more program details, go to [www.panduit.com/tpp](http://www.panduit.com/tpp) or contact *PANDUIT* Customer Service at 800-777-3300.

### PC Express Program

PC Express offers the ultimate level of service for your power connector needs. PC Express is offered through select authorized *PANDUIT* distributors. The PC Express Program provides customers with the ability to receive power connector orders, via second day delivery, at no additional charge.

The customer can place an order of any size, up to a 300 lb. maximum weight, through an authorized *PANDUIT* distributor and *PANDUIT* will absorb the second day freight charges. All orders will be shipped directly to the customer. Orders received by *PANDUIT* Customer Service before 3:00 P.M. CST will be shipped on the same day, via second day delivery. Orders received after 3:00 P.M. CST will be shipped the next business day, via second day delivery.

For more program details, go to [www.panduit.com/pcexpress](http://www.panduit.com/pcexpress) or contact *PANDUIT* Customer Service at 800-777-3300.

Note: All programs and benefits are subject to terms and conditions.

## CABLE TIES

*PANDUIT* offers the most complete selection of cable tie styles, sizes, materials and colors to meet our customers' needs. *PANDUIT* cable ties bundle, mount, and identify in countless indoor, outdoor, and harsh environment applications. *PANDUIT* cable ties, wiring accessories, and installation tools allow our customers to achieve the lowest total installed cost of managing wire and cable.

- *PANDUIT* continues to provide innovative new cable tie designs to meet our customers' application challenges
- *PANDUIT* cable ties and wiring accessories can be used in a variety of applications and environments, providing the optimal wire management solution
- *PANDUIT* offers a large selection of ergonomic cable tie installation tools – from high-speed automatic systems to hand operated tools; all with consistent, reliable performance

*PANDUIT* leads the industry in the breadth and depth of available cable tie designs created from customer feedback on their application requirements. As with all *PANDUIT* products, quality in design and production along with customer service excellence are assured.

## Cable Tie Selection Chart

Follow this step-by-step process to find the cable ties that best suit your application:

**Cable Tie Function**  
 1) Select the main function of the cable tie you need:  
 Bundle = Standard Cable Ties  
 Re-use = Nylon Releasable Ties\*  
 Identify = Marker and Flag Ties  
 Mount = Clamp Ties, Push Mount Ties, and Stud Mount Ties

**Material Properties**  
 2) Determine the appropriate material for your application:  
 Mechanical  
 Chemical  
 Thermal

**Cable Tie Family**  
 3) Select the cable tie family that meets your overall needs

## Cable Tie Styles Overview

B1.  
Cable Ties

### PAN-TY® Cable Ties

Pages B1.6 – B1.37

- Designed for use in numerous applications to meet a variety of needs in the OEM, MRO, and construction markets
- Largest selection of styles, materials, and sizes
- One-piece construction for consistent performance and reliability
- Lowest threading force of any one-piece cable tie in the industry

C1.  
Wiring  
Duct

C2.  
Surface  
Raceway

### SUPER-GRIP® Cable Ties

Pages B1.38 – B1.42

- Designed for the strength requirements of the MRO and construction markets
- Thin, wide strap body – flexible, conforms to bundles
- Strong – withstands rough installation practices
- Grips wires tightly and resists lateral movement

C3.  
Abrasion  
Protection

C4.  
Cable  
Management

D1.  
Terminals

### DOME-TOP® Barb Ty Cable Ties

Pages B1.43 – B1.55

- Approved for the demanding MRO and construction requirements as typified in the oil and gas markets
- Stainless steel barb provides consistent performance and reliability
- Infinitely adjustable for tight bundles throughout entire bundle range
- Dome-top head features unique patented design with smooth, round edges

D2.  
Power  
Connectors

D3.  
Grounding  
Connectors

E1.  
Labeling  
Systems

E2.

### Parallel-Entry Cable Ties

Pages B1.56 – B1.64

- Designed for use in the OEM and transportation markets
- All parallel-entry ties provide a low profile head which avoids snags and reduces overall bundle size
- No protrusion of tie cut-off – protects workers' arms/hands
- *CONTOUR-TY*® Cable Ties have outside teeth and smooth, round edges to protect cable jacket – perfect for high vibration applications

## STA-STRAP® Cable Ties

Pages B1.65 – B1.72

- Convenient and easy to use in OEM manual assembly operations
- Exclusive, two-piece design provides lowest threading force in the industry
- Use for normal bundling and through-panel applications
- Releasable prior to final tensioning and cut-off

## Hook and Loop Cable Ties

Pages B1.85 – B1.90

- Ideal for the telecommunications, financial, education and government markets
- Adjustable, releasable, and re-usable
- No risk of over-tensioning or damaging high performance network cables
- Variety of styles, sizes, and colors

## Manual Cable Tie Installation Tools

Pages B1.107 – B1.112

- Used in production, maintenance, and construction applications
- Designed for ease of use and to reduce repetitive stress injuries
- Full line of lightweight, ergonomic hand tools – PANDUIT leads the industry in reliability and performance
- Flush cut-off of cable tie limits exposure to sharp edges

## Automatic Cable Tie Installation Tools

Pages B1.113 – B1.121

- An efficient solution for high volume OEM harness, assembly, fastening and packaging applications
- High-speed tools lower installed cost and reduce operator fatigue
- Wrap, tension, and cut-off cable ties in less than a second
- Reel-fed systems for miniature and standard cross section cable ties

Cable tie tools speed installation and reduce total installed cost.  
See pages B1.107 – B1.112.

Cable tie accessories are used to speed and simplify the mounting of wires, cables, and tubing.  
See pages B2.1 – B2.29.

## Selection Guide – PAN-TY® Cable Ties

| Material, Color (Suffix)  | Style/Function            | Part Number Prefix           | Catalog Page   |
|---|---------------------------|------------------------------|----------------|
| Nylon 6.6, Natural (No Suffix)  | Locking Ties/Bundle       | PLT                          | B1.8,9         |
|   | Releasable Ties/Re-usable | PRT                          | B1.22          |
|   | Clamp Ties/Mount          | PLC                          | B1.26          |

A.  
System  
Overview

**UL US** **UL LISTED** **CSA US** **PAN-Ty® Cable Ties – Nylon 6.6**

B1.  
Cable Ties

- For indoor use
- Versatile cable ties can be used in countless applications
- One-piece construction for consistent performance and reliability

- Lowest threading force of any one-piece cable tie in the industry
- Curved tip is easy to pick up from flat surfaces and allows faster initial threading to speed installation
- A variety of materials and colors are available for specific applications

C1.  
Wiring  
Duct

| Part Number | Length |    | Width |    | Thickness |    | Max. Bundle Dia. |    | Min. Loop Tensile Str. |   | Recommended Installation Tool | Std. Pkg. Qty. | Std. Ctn. Qty. |
|-------------|--------|----|-------|----|-----------|----|------------------|----|------------------------|---|-------------------------------|----------------|----------------|
|             | In.    | mm | In.   | mm | In.       | mm | In.              | mm | Lbs.                   | N |                               |                |                |

A. System Overview

**UL** US **UL** LISTED **CSA** **PAN-TY® Cable Ties – Weather Resistant Nylon 6.6**

B1. Cable Ties

- Greater resistance to damage caused by ultraviolet light – indoor or outdoor use
- Versatile cable ties can be used in countless applications
- One-piece construction for consistent performance and reliability
- Lowest threading force of any one-piece cable tie in the industry
- Curved tip is easy to pick up from flat surfaces and allows faster initial threading to speed installation

B2. Cable Accessories

B3. Stainless Steel Ties

C1. Wiring Duct

C2. Surface Raceway

## PAN-TY® Cable Ties – Heat Stabilized Weather Resistant Nylon 6.6

- Greater resistance to damage caused by ultraviolet light and for high temperature applications up to 212°F (100°C) – indoor or outdoor use
- One-piece construction for consistent performance and reliability

- Lowest threading force of any one-piece cable tie in the industry
- Curved tip is easy to pick up from flat surfaces and allows faster initial threading to speed installation

\*Black flame retardant material (60).  
Note: UL Recognized and CSA Certified except 60 material.

## Cable Tie Mounts – Flame Retardant Nylon 6.6

- Flammability rating of UL 94V-0 – indoor use
- Unique cradle design provides maximum stability for the cable bundle
- Low profile design keeps bundle close to mounting surface

\*Cable tie cross section sizes: M = Miniature, I = Intermediate, S = Standard and LH = Light-Heavy.

## PAN-TY® Cable Ties – Weather Resistant Nylon 12

- For high moisture, corrosive (zinc chloride and dilute acids), and low temperature indoor or outdoor applications
- Cable tie of choice for making attachments to galvanized surfaces
- One-piece construction for consistent performance and reliability
- Lowest threading force of any one-piece cable tie in the industry
- Curved tip is easy to pick up from flat surfaces and allows faster initial threading to speed installation

System  
Overview

## PAN-TY® Cable Ties – Polypropylene – Distinctive Green Color

B1.  
Cable Ties

- For chemical resistance where high loop tensile strength is not required especially in the presence of hydrochloric acid, salts, and bases
- For indoor use
- Material requires lowering the tool setting (see table below)
- One-piece construction for consistent performance and reliability
- Lowest threading force of any one-piece cable tie in the industry
- Curved tip is easy to pick up from flat surfaces and allows faster initial threading to speed installation

System  
Overview

## PAN-TY® Cable Ties – HALAR® – Distinctive Maroon Color

B1.  
Cable Ties

- UL Listed for use in plenum or air handling spaces per NEC, Section 300-22 (C) and (D)
- Low smoke density and excellent flammability rating of UL 94V-0
- Commonly accepted solution for bundling qualified cable without conduit in air handling space applications

- Greater resistance to damage caused by ultraviolet light – indoor or outdoor use
- One-piece construction for consistent performance and reliability
- Lowest threading force of any one-piece cable tie in the industry
- Curved tip is easy to pick up from flat surfaces and allows faster initial threading to speed installation

## PAN-TY® Cable Ties – TEFZEL® – Distinctive Aqua Blue Color

- Ideal for applications requiring resistance to environmental stresses such as chemical attack, gamma radiation, ultraviolet radiation and extreme high and low temperatures
- Ideal for use in nuclear power facilities and chemical processing plants and meets the requirements of IEEE 383
- Low smoke density and excellent flammability rating of UL 94V-0

- One-piece construction for consistent performance and reliability
- Lowest threading force of any one-piece cable tie in the industry
- Curved tip is easy to pick up from flat surfaces and allows faster initial threading to speed installation
- For indoor or outdoor use

## PAN-TY® Cable Tie Mounts – TEFZEL®

- Flammability rating of UL 94V-0 – indoor use
- Unique cradle design provides maximum stability for the cable bundle

- Low profile design keeps bundle close to mounting surface

Overview

## **NEW!** PAN-TY® Cable Ties – PEEK (Polyetheretherketone)

B1.  
Cable Ties

- Ideal for harsh environments where a cable tie material is required to hold up to chemical or radiation exposure
- Non-conductive material that is excellent for high temperature applications up to 500°F (260°C)
- High strength properties over a wide range of temperatures

- Flammability rating of UL 94V-0 with low smoke and toxicity; halogen-free
- PEEK material meets MIL specification MIL-P-46183, and is approved for use by the Department of Defense
- One-piece construction for consistent performance and reliability
- Lowest threading force of any one-piece cable tie in the industry

## PAN-TY® Cable Ties – Metal Detectable Nylon 6.6

- For indoor use
- Metal impregnated material allows identification by metal detectors or x-ray inspection equipment to help meet food, beverage, and pharmaceutical safety standards, to help reduce product contamination, loss, and recall
- One-piece construction for consistent performance and reliability
- Lowest threading force of any one-piece cable tie in the industry
- Curved tip is easy to pick up from flat surfaces and allows faster initial threading to speed installation

A. System Overview

## PAN-TY® Releasable Cable Ties – Nylon 6.6

B1. Cable Ties

- For indoor use
- Extended release tab permits easy release and re-use where changes are anticipated during development, production, or servicing in the field

- One-piece construction for consistent performance and reliability
- Curved tip is easy to pick up from flat surfaces and allows faster initial threading to speed installation

To release, grasp the head of the cable tie, deflect release tab, and pull the cable tie away from the bundle.

Note: UL Listed for use in plenum or air handling spaces per NEC except PRT2H/3H/4H.

D2. Power Connectors

## PAN-TY® Releasable Lashing Ties – Nylon 6.6

D3. Grounding Connectors

- For indoor use
- Release tab permits easy release and re-use where changes are anticipated during development, production, or servicing in the field

- Typically used for heavy duty applications
- Strongest PAN-TY® Cable Tie available
- Can be used with MCEH mounting clip, see page B1.24

## PAN-TY® Releasable Cable Ties – Weather Resistant and Heat Stabilized Nylon 6.6

- Weather resistant material has greater resistance to damage caused by ultraviolet light – indoor or outdoor use
- Heat stabilized material for high temperature applications up to 239°F (115°C) – indoor use

- Extended release tab permits easy release and re-use where changes are anticipated during development, production, or servicing in the field
- One-piece construction for consistent performance and reliability
- Curved tip is easy to pick up from flat surfaces and allows faster initial threading to speed installation

To release, grasp the head of the cable tie, deflect release tab, and pull the cable tie away from the bundle.

## UL<sup>®</sup> US C<sup>®</sup> SP<sup>®</sup> US PAN-TY<sup>®</sup> Clamp Ties – Weather Resistant and Heat Stabilized Nylon 6.6

- Weather resistant material has greater resistance to damage caused by ultraviolet light – indoor or outdoor use
- Heat stabilized material for high temperature applications up to 239°F (115°C) – indoor use
- Used to secure a cable bundle to another surface such as a control panel, communication rack, wall or ceiling
- Design allows for bundling before or after screwing clamp in place
- One-piece construction for consistent performance and reliability
- Curved tip is easy to pick up from flat surfaces and allows faster initial threading to speed installation

A. System Overview

**PAN-TY® Wing Push Mount Ties – Nylon 6.6**

- For indoor use
- Cable tie, mount, and fastener in a single part
- Used to attach bundles to another surface such as a flat panel
- Anchor is easily pressed into a pre-formed hole and locks in place
- Wings provide constant tension for a stable, secure, and rattle-free installation
- Curved tip is easy to pick up from flat surfaces and allows faster initial threading to speed installation

A. System Overview

## UL US CSF US PAN-TY® Releasable Wing Push Mount Ties

B1. Cable Ties

- Natural nylon material for indoor use
- Weather resistant material has greater resistance to damage caused by ultraviolet light – indoor or outdoor use
- Heat stabilized material for high temperature applications up to 239°F (115°C) – indoor use
- Cable tie, mount, and fastener in a single part
- Used to attach bundles to another surface such as a flat panel

- Anchor is easily pressed into a pre-formed hole and locks in place
- Wings provide constant tension for a stable, secure, and rattle-free installation
- Extended release tab permits easy release and re-use where changes are anticipated during development, production, or servicing in the field
- Curved tip is easy to pick up from flat surfaces and allows faster initial threading to speed installation

## UL US CSA US PAN-Ty® Center Mounted Wing Push Mount Ties – Heat Stabilized Nylon 6.6

- For high temperature applications up to 239°F (115°C) – indoor use
- Used to center the bundle over the mount on all bundle diameters
- Cable tie, mount, and fastener in a single part
- Anchor is easily pressed into a pre-formed hole and locks in place
- Wings provide constant tension for a stable, secure, and rattle-free installation
- Curved tip is easy to pick up from flat surfaces and allows faster initial threading to speed installation

**PLWP-SC** – Designed for normal wire bundles.

**PLWP-SD** – Designed for corrugated loom tubing. Bump prevents lateral and axial movement.

**PLWP-SE** – Designed for corrugated loom tubing, see page C3.11. Bump prevents lateral movement.

**Bundle diameters from .12" to 1.97" (3mm to 50mm)**

## PAN-TY® Ladder Style Releasable Wing Push Mount Ties – Heat Stabilized Nylon 6.6

- For high temperature applications up to 239°F (115°C) – indoor use
- Unique releasable ladder design eliminates the need for multiple clamp sizes
- Cable tie, mount, and fastener in a single part

- Used to attach bundles to another surface such as a flat panel
- Anchor is easily pressed into a pre-formed hole and locks in place
- Wings provide constant tension for a stable, secure, and rattle-free installation
- Curved tip is easy to pick up from flat surfaces and allows faster initial threading to speed installation

## PAN-TY® Umbrella Wing Push Mount Ties – Nylon and Heat Stabilized Nylon 6.6

- Natural nylon material for indoor use
- Heat stabilized material for high temperature applications up to 239°F (115°C) – indoor use
- Quick, secure way to fasten to clearance holes in panel
- Anchor is easily pressed into a pre-formed hole in a light gauge metal or plastic and locks in place

- Umbrella shaped disk provides constant tension for a stable, secure, and rattle-free installation
- Disk forms a dust-tight and semi-liquid tight seal to the panel surface
- PLUP40SE style is for use with corrugated loom tubing, see page C3.11
- Curved tip is easy to pick up from flat surfaces and allows faster initial threading to speed installation

\*Heat stabilized material (30).

## PAN-TY® Push Mount Ties

- Natural nylon material for indoor use
- Weather resistant material has greater resistance to damage caused by ultraviolet light – indoor or outdoor use
- Heat stabilized material for high temperature applications up to 239°F (115°C) – indoor use
- *Wingless* design allows tie to be used in confined spaces

- Cable tie, mount, and fastener in a single part
- Economical push mount ties are used to attach bundles to another surface such as a flat panel
- Anchor is easily pressed into a pre-formed hole and locks in place
- Curved tip is easy to pick up from flat surfaces and allows faster initial threading to speed installation

## UL US C<sub>UL</sub> SP US PAN-TY® Marker and Flag Ties

- Natural nylon material for indoor use
- Weather resistant material has greater resistance to damage caused by ultraviolet light – indoor or outdoor use
- Flame retardant material has a flammability rating of UL 94V-0 – for indoor use
- Used to fasten and identify bundles at the same time
- One-piece construction for consistent performance and reliability
- Can be marked with *PANDUIT* marker pens on page B1.51 or computer printable labels
- Custom imprinting with text, symbols, or trademarks available using *PANDUIT* Custom Hot Stamping Service, see page B1.91
- Curved tip is easy to pick up from flat surfaces and allows faster initial threading to speed installation

One-piece locking wedge provides consistent, reliable performance

Strong locking wedge improves strength and allows for rough handling

High loop tensile strength exceeds industry standards

Thin, wide strap body provides increased flexibility while maintaining loop tensile strength

Thin, flared neck tolerates rough installation practices and improves small bundle performance

Curved, tapered tip threads easily and installs faster

Aggressive grips allow temporary threading of tie before the strap teeth are engaged

Cable tie tools speed installation and reduce total installed cost. See pages B1.107 – B1.112.

Cable tie accessories are used to speed and simplify the mounting of wires, cables, and tubing. See pages B2.5, B2.7, B2.12, B2.14, B2.20.

## Selection Guide – SUPER-GRIP® Cable Ties

| Material, Color (Suffix)               | Style/Function      | Part Number Prefix | Catalog Page |
|--|---------------------|--------------------|--------------|
| Nylon 6.6, Natural (No Suffix)         | Locking Ties/Bundle | SG                 | B1.40        |
| Weather Resistant Nylon 6.6, Black (0) | Locking Ties/Bundle | SG                 | B1.41        |
| Heat Stabilized Nylon 6.6, Black (30)  | Locking Ties/Bundle | SG                 | B1.41        |

## SUPER-GRIP® Cable Ties – Nylon 6.6

B1.  
Cable Ties

- For indoor use
- Designed to grip the bundle tightly to resist lateral movement of the tie once installed
- High strength allows the tie to withstand rough installation practices that occur in MRO and construction environments

- Thin, wide strap body provides flexibility enabling it to conform to bundle while maintaining tensile strength
- Curved tip is easy to pick up from flat surfaces and allows faster initial threading to speed installation
- Complementary mounts available, see pages B2.5, B2.7, B2.12, B2.14 and B2.20

## SUPER-GRIP® Cable Ties – Weather Resistant and Heat Stabilized Nylon 6.6

- Weather resistant material has greater resistance to damage caused by ultraviolet light – indoor or outdoor use
- Heat stabilized material for high temperature applications up to 239°F (115°C) – indoor use
- Designed to grip the bundle tightly to resist lateral movement of the tie once installed

- High strength allows the tie to withstand rough installation practices that occur in MRO and construction environments
- Thin, wide strap body provides flexibility enabling it to conform to bundle while maintaining tensile strength
- Curved tip is easy to pick up from flat surfaces and allows faster initial threading to speed installation
- Complementary mounts available, see pages B2.5, B2.7, B2.12, B2.14 and B2.20

## Features and Benefits – *DOME-TOP®* Barb Ty Cable Ties

Two-piece design incorporates a stainless steel locking barb in a nylon cable tie.

Cable tie tools speed installation and reduce total installed cost. See pages B1.107 – B1.112.

Cable tie accessories are used to speed and simplify the mounting of wires, cables, and tubing. See pages B2.1 – B2.29.

## DOME-TOP® Barb Ty Cable Ties – Nylon 6.6

- For indoor use
- Dome-top head features unique patented design with round, smooth edges
- Stainless steel locking barb provides consistent performance, reliability, and infinite adjustability through entire bundle range

- High strength and low thread force
- A variety of materials and colors are available for specific applications
- Curved tip is easy to pick up from flat surfaces and allows faster initial threading to speed installation

## DOME-TOP® Barb Ty Cable Ties – Weather Resistant Nylon 6.6

B1. Cable Ties

- Greater resistance to damage caused by ultraviolet light – indoor or outdoor use
- Dome-top head features unique patented design with round, smooth edges

- Stainless steel locking barb provides consistent performance, reliability, and infinite adjustability through entire bundle range
- High strength and low thread force
- Curved tip is easy to pick up from flat surfaces and allows faster initial threading to speed installation

## DOME-TOP® Barb Ty Cable Ties – Heat Stabilized Nylon 6.6

- For high temperature applications up to 239°F (115°C) – indoor use
- Dome-top head features unique patented design with round, smooth edges

- Stainless steel locking barb provides consistent performance, reliability, and infinite adjustability through entire bundle range
- Curved tip is easy to pick up from flat surfaces and allows faster initial threading to speed installation

System  
Overview

**UL** **UL** **SP** **DOME-TOP® Barb Ty Clamp Ties – Nylon 6.6**

B1.  
Cable Ties

- For indoor use
- Used to secure a cable bundle to another surface such as a control panel, communication rack, wall or ceiling
- Design allows for bundling before or after screwing clamp in place

- Stainless steel locking barb provides consistent performance, reliability, and infinite adjustability through entire bundle range
- Curved tip is easy to pick up from flat surfaces and allows faster initial threading to speed installation

## DOME-TOP® Barb Ty Clamp Ties – Weather Resistant and Heat Stabilized Nylon 6.6

- Weather Resistant material has greater resistance to damage caused by ultraviolet light – indoor or outdoor use
- Heat stabilized material for high temperature applications up to 239°F (115°C) – indoor use
- Used to secure a cable bundle to another surface such as a control panel, communication rack, wall or ceiling
- Design allows for bundling before or after screwing clamp in place
- Stainless steel locking barb provides consistent performance, reliability, and infinite adjustability through entire bundle range
- Curved tip is easy to pick up from flat surfaces and allows faster initial threading to speed installation

A. System Overview

## DOME-TOP® Barb Ty Wing Push Mount Ties – Nylon and Weather Resistant Nylon 6.6

B1. Cable Ties

- Natural nylon material for indoor use
- Weather resistant material has greater resistance to damage caused by ultraviolet light – indoor or outdoor use
- Combine cable tie, mount, and fastener into a single part
- Used to attach bundles to another surface such as a flat panel
- Anchor is easily pressed into a pre-formed hole and locks in place

- Wings provide constant tension for a stable, secure, and rattle-free installation
- Stainless steel locking barb provides consistent performance, reliability, and infinite adjustability through entire bundle range
- Curved tip is easy to pick up from flat surfaces and allows faster initial threading to speed installation

A. System Overview

## UL US CS DOME-TOP® Barb Ty Marker and Flag Ties

B1. Cable Ties

- Natural nylon material for indoor use
- Weather resistant material has greater resistance to damage caused by ultraviolet light – indoor or outdoor use
- Used to fasten and identify bundles at the same time
- Can be marked with *PANDUIT* marker pens on the previous page or computer printable labels
- Custom imprinting with text, symbols, or trademarks available using *PANDUIT* Custom Hot Stamping Service, see page B1.91
- Stainless steel locking barb provides consistent performance, reliability, and infinite adjustability through entire bundle range
- Curved tip is easy to pick up from flat surfaces and allows faster initial threading to speed installation

## DURA-TY™ Cable Ties – Weather Resistant Acetal – Heavy Cross Section

- Black acetal strap and head material provide 20+ years outdoor life and high impact resistance
- Excellent ultraviolet light, chemical, and moisture resistance

- Double stainless steel locking barbs provide consistent and predictable holding values
- Textured strap provides better gripping surface to prevent tie from moving laterally along the length of the bundle for tight, consistent bundles
- Robust head design allows tie to be tightened over a wide range of angles
- Convenient reel dispenser pack allows installer to cut-to-size for customized field applications; recyclable box has through-hole for attaching to belt, plus storage area for bag of heads
- Ideal for securing cables in outdoor messenger strand applications
- May be used with stackable aerial cable spacer on the next page

## DURA-TY™ Cable Ties – Weather Resistant Acetal – Extra-Heavy Cross Section

- Black acetal strap and head material provide 20+ years outdoor life and high impact resistance
- Excellent ultraviolet light, chemical, and moisture resistance
- Double stainless steel locking barbs provide consistent and predictable holding values
- Ideal for securing cables in outdoor messenger strand applications
- Meets Telcordia TR-TSY-000789 industry guidelines for lashed cable supports

- Convenient reel dispenser pack allows installer to cut-to-size for customized field applications; recyclable box has through-hole for attaching to belt, plus storage area for bag of heads
- Several pre-cut sizes have lead-in style angled tips on pre-assembled straps for easy installation, even with gloved hands, to speed installation
- May be used with stackable aerial cable spacer on the next page

**Formula to determine amount of strapping required:**  
 Diameter (inches) x 3.14 + 4.5 inches  
 Diameter (mm) x 3.14 + 114mm

System  
Overview

## Stackable Aerial Cable Spacer – Weather Resistant Polypropylene

B1.  
Cable Ties

- Greater resistance to damage caused by ultraviolet light – indoor or outdoor use
- Each spacer snaps into another to increase spacer heights by 1/2" increments

- Designed for use in parallel or perpendicular applications
- For use with *DURA-TY™* Cable Ties shown on the previous page

Overview

## Features and Benefits – Parallel-Entry Cable Ties

Parallel-entry cable ties limit exposure to sharp edges and protect workers' arms/hands. The ties are designed with a low profile head to avoid snags and reduce overall bundle size.

B1.  
Cable Ties

### CONTOUR-TY® Cable Ties

Fully enclosed head for consistent strength

Fully rounded edges on head and strap

Outside teeth and smooth round edges protect cable jacket – ideal for high vibration applications

Curved tip threads easily and installs faster

Rounded tip and aggressive grip for faster initial threading

### HYPER-V™ Cable Ties

Design provides for an optional threading position that allows releasable, temporary bundling

Fixed and flexible 2-wedge locking design

Tip bending serrations and threading hole facilitate installations in confined spaces

### BELT-TY™ In-Line Cable Ties

"Finger grip" shaped head assures positive grip while threading tie

Parallel-entry limits exposure to sharp edges and protects workers' arms/hands

### IN-LINE Cable Ties

Outside teeth protect cable jacket and wire insulation

"Finger grip" shaped head with serrations assures positive grip while threading tie

System  
Overview

## CONTOUR-TY® Cable Ties – Nylon 6.6

B1.  
Cable Ties

- For indoor use
- Unique design prevents wire and cable damage
- Low profile head avoids snags and reduces overall bundle size
- Outside teeth and smooth round edges protect cable jacket – ideal for high vibration applications
- Parallel-entry limits exposure to sharp edges and protects workers' arms/hands
- Fully enclosed head for consistent strength

- Curved tip is easy to pick up from flat surfaces and allows faster initial threading to speed installation

Note: Nylon 6.6 cable ties in natural and colors meet the testing requirements of the U.S. Military Aerospace Standard SAE-AS23190A and the dimensional requirements of Aerospace Standard SAE-AS33671.

## CONTOUR-TY® Cable Ties – Weather Resistant Nylon 6.6

- Greater resistance to damage caused by ultraviolet light – indoor or outdoor use
- Unique design prevents wire and cable damage
- Low profile head avoids snags and reduces overall bundle size
- Outside teeth and smooth round edges protect cable jacket – ideal for high vibration applications

- Parallel-entry limits exposure to sharp edges and protects workers' arms/hands
- Fully enclosed head for consistent strength
- Curved tip is easy to pick up from flat surfaces and allows faster initial threading to speed installation

A. System Overview

## CONTOUR-TY® Cable Ties – Heat Stabilized and Flame Retardant Nylon 6.6

B1. Cable Ties

- Heat stabilized material for high temperature applications up to 239°F (115°C) – indoor use
- Flame retardant material has a flammability rating of UL 94V-0 – indoor use
- Unique design prevents wire and cable damage
- Low profile head avoids snags and reduces overall bundle size
- Outside teeth and smooth round edges protect cable jacket – ideal for high vibration applications
- Parallel-entry limits exposure to sharp edges and protects workers' arms and hands
- Fully enclosed head for consistent strength
- Curved tip is easy to pick up from flat surfaces and allows faster initial threading to speed installation

Note: UL Recognized, UL Listed, and CSA Certified, except CBR3S-M69.

**UL US LISTED** **UL US LISTED** **CSA US** **BELT-TY™ In-Line Cable Ties – Nylon and Weather Resistant Nylon 6.6**

- Natural nylon material for indoor use
- Weather resistant material has greater resistance to damage caused by ultraviolet light – indoor or outdoor use
- Parallel-entry cable tie that threads like a belt (180° entry)
- Low profile head avoids snags and reduces overall bundle size
- 35% lower head height than conventional 90° ties
- Parallel-entry limits exposure to sharp edges and protects workers' arms/hands
- Curved tip is easy to pick up from flat surfaces and allows faster initial threading to speed installation

A. System Overview

## HYPER-V™ In-Line Cable Ties – Weather Resistant Nylon 6.6

B1. Cable Ties

- Fixed and flexible two-wedge locking design provides a low threading force
- Teeth on both sides of cable tie body provide additional locking strength and improved flexibility to conform to irregular bundle shapes such as securing cables to cable tray systems
- Releasable head position for temporary bundling of cables prior to final locking; no need to replace ties when adding cables/wires to the bundle
- Teeth on full length of body support a wide range of bundle diameters
- Bending serrations on the tip of the tie allow the tip to be easily formed into an arc, enabling installer to “fish” the tie around the bundle in a confined space
- Threading hole in the tip of the tie allows an installer to hook the tip with a simple device to pull the tie through spaces with limited access
- In-Line tie design for parallel-entry of the tie into head resulting in a lower profile on cable bundles
- Complementary mounts shown below

## HYPER-V™ Cable Tie Mounts

- Tie mount has retaining tab within window to hold cable tie in position when pre-installed in the mount; low profile design keeps bundle close to mounting surface
- Masonry mounts are used to secure wire, cable, or tubing to masonry surfaces
- For outdoor use

## IN-LINE Cable Ties – Weather Resistant Nylon 6.6

- Greater resistance to damage caused by ultraviolet light – indoor or outdoor use
- Parallel-entry cable tie that threads like a belt (180° entry)
- Wide tie body provides high tensile strength
- 50% lower head height than conventional 90° ties
- Parallel-entry limits exposure to sharp edges and protects workers' arms/hands
- Outside teeth protect cable jacket and wire insulation
- “Finger grip” shaped head with serrations assures positive grip while threading tie
- Install by hand or use *PANDUIT* GTH installation tool, see page B1.109
- Flexible – easy to handle and install
- Available in UV weather resistant colors for color coordination and UV stability

## Features and Benefits – STA-STRAP® Cable Ties

Two-piece design incorporates a separate nylon head and strap.

Free floating head design results in tight bundles and low installed head height

Two-piece design results in extremely low thread force

High loop tensile strength exceeds industry standards

Thin tapered tip for easy installation

Design may be released prior to final tensioning

Cable tie tools speed installation and reduce total installed cost. See pages B1.107 – B1.112.

Cable tie accessories are used to speed and simplify the mounting of wires, cables, and tubing. See pages B2.1 – B2.29.

## UL® CS® STA-STRAP® Cable Ties – Nylon 6.6

- For indoor use
- Used for normal bundling and through-panel applications
- Small head height allows more efficient use of space in compact areas

- Exclusive two-piece design offers the lowest threading force in the industry
- Average 14% lighter than one-piece cable ties
- Releasable prior to final tensioning for bundle modifications

## UL US CSA STA-STRAP® Cable Ties – Weather Resistant Nylon 6.6

- Greater resistance to damage caused by ultraviolet light – indoor or outdoor use
- Used for normal bundling and through-panel applications
- Small head height allows more efficient use of space in compact areas
- Exclusive two-piece design offers the lowest threading force in the industry
- Average 14% lighter than one-piece cable ties
- Releasable prior to final tensioning for bundle modifications

## UL<sup>®</sup> US CS<sup>®</sup> STA-STRAP® Cable Ties – Heat Stabilized Nylon 6.6

- For high temperature applications up to 239°F (115°C) – indoor use
- Used for normal bundling and through-panel applications
- *Heavy head* design is available for use in through-panel applications with a larger opening up to .400" (10.2mm)
- Small head height allows more efficient use of space in compact areas

- Exclusive two-piece design offers the lowest threading force in the industry
- Average 14% lighter than one-piece cable ties
- Releasable prior to final tensioning for bundle modifications

System  
Overview

## STA-STRAP® Clamp Ties

B1.  
Cable Ties

- Natural nylon material for indoor use
- Weather resistant material has greater resistance to damage caused by ultraviolet light – indoor or outdoor use
- Heat stabilized material for high temperature applications up to 239°F (115°C) – indoor use
- Design allows for bundling before or after screwing clamp in place

- Exclusive two-piece design offers the lowest threading force in the industry
- Used to secure a cable bundle to another surface such as a control panel, communication rack, wall or ceiling
- Only clamp tie that is releasable prior to final tensioning

## UL<sup>®</sup> US CS<sup>®</sup> STA-STRAP<sup>®</sup> Marker Ties – Nylon and Weather Resistant Nylon 6.6

- Natural nylon material for indoor use
- Weather resistant material has greater resistance to damage caused by ultraviolet light – indoor or outdoor use
- Used to fasten and identify bundles at the same time
- Unique design allows tie to be used as a wrap-around or flag marker

- Can be marked with *PANDUIT* Marker Pens on page B1.51 or computer printable labels
- Custom imprinting with text, symbols, or trademarks available using *PANDUIT* Custom Hot Stamping Service, see page B1.91

A. System Overview

## PAN-TY® Stud Mounted Cable Ties – Heat Stabilized and Heat Stabilized Weather Resistant Nylon 6.6

B1. Cable Ties

- Heat stabilized material for high temperature applications up to 239°F (115°C) – indoor use
- Heat stabilized weather resistant material has greater resistance to damage caused by ultraviolet light and for high temperature applications up to 212°F (100°C) – indoor or outdoor use
- Integral mount pushes onto a threaded stud and tie wraps around bundle

- Mid-mount style (PLST\_SC) centers the wire bundle over the stud
- Tie can be removed from the stud by turning counterclockwise
- Releasable style available (PRST)
- Curved tip is easy to pick up from flat surfaces and allows faster initial threading to speed installation

## UL<sup>®</sup> US CS<sup>®</sup> PAN-TY<sup>®</sup> Double Loop Cable Ties

- Natural nylon material for indoor use
- Weather resistant material has greater resistance to damage caused by ultraviolet light – indoor or outdoor use
- Heat Stabilized material for high temperature applications up to 239°F (115°C) – indoor use

- A fast and economical method to secure and separate two bundles
- Reduces part number inventory – single part covers multiple bundle sizes
- Installs easily by hand – second loop can be installed with *PANDUIT* cable tie installation tools

## PAN-TY® Triple Loop Cable Tie – Weather Resistant Nylon 6.6

B1. Cable Ties

- Greater resistance to damage caused by ultraviolet light – indoor or outdoor use
- A fast and economical method to secure and separate three bundles
- Third loop can be installed with *PANDUIT* cable tie installation tools

## Double Hose Clamp – Weather Resistant Nylon 6.6

- Greater resistance to damage caused by ultraviolet light – indoor or outdoor use
- Holds and separates two gasoline, hydraulic, or pneumatic hoses
- Holds each hose individually to prevent abrasion and twisting

## STA-STRAP® Chassis/Panel Mount Tie – Heat Stabilized Weather Resistant Nylon 6.6

- Greater resistance to damage caused by ultraviolet light and for high temperature applications up to 212°F (100°C) – indoor or outdoor use
- Unique design allows tie to secure a bundle directly to a chassis or panel without the need for separate fasteners or mounting devices

- Releasable prior to final tensioning for bundle modifications
- Engages clearance hole with optional centering pilot to prevent tie from shifting or abrading in high vibration environments

### Through-Panel Mount Installation in Three Easy Steps:

1) Insert tip of cable tie through the pre-drilled hole in the panel.

2) Wrap cable tie around the bundle and insert tip back through the hole and head of the cable tie.

3) Pull tip until cable tie is snug on bundle. Tension and cut off excess portion with installation tool.

Overview

## Cable Marker Straps – Polyethylene

B1.  
Cable Ties

- Identify and code telephone and fiber optic cable
- Eliminate the need for costly and cumbersome lead marking tags
- Lightweight and easy to install
- Use as wrap-around or flag marker

- For underground identification applications
- Can be marked with *PANDUIT* marker pens, see page B1.51
- Custom imprinting with text, symbols, or trademarks available using *PANDUIT* Custom Hot Stamping Service, see page B1.91

## Features and Benefits – Hook and Loop Cable Ties

The comprehensive family of hook and loop cable ties delivers reliability by protecting against over-tensioning of high performance fiber and copper cables. These ties are adjustable, releasable, and re-usable to effectively support frequent moves, adds, and changes (MACs). A wide range of colors provides flexibility and an aesthetically pleasing appearance. The complete line of *PANDUIT* Hook and Loop Cable Ties help maintain the reliable, scalable, and aesthetic requirements of data centers.

### TAK-TY® Hook & Loop Cable Ties – Premium, durable designs and sizes

#### Loop Style

Allows for pre-wrapping of bundles

#### Roll/Strip Style

Available in continuous or perforated rolls

#### Plenum-Rated

Distinctive maroon color (also available in black)

### TAK-TAPE™ Hook & Loop Rolls

Strong, low profile hook and loop material

Convenient packaging

### ULTRA-CINCH™ Hook & Loop Cable Ties

Unique same-sided material secures a greater range of bundle diameters

Available in three styles and eight colors; grommet styles used for bundle mounting applications

Low profile contoured cinch ring reduces overall bundle size

Wire management accessories speed and simplify the mounting of high performance cabling.

## TAK-TY® Hook & Loop Cable Ties

- Soft, premium material is safe to use on high performance cabling protecting against over-tensioning
- Broadest selection of durable designs and sizes to meet your application needs
- Adjustable, releasable, and re-usable multiple times – ideal for applications requiring frequent moves, adds, or changes

- A full range of colors
- Operating temperature range: 0°F to 220°F (-18°C to 104°C)
- Complementary mounts available, see page B2.10

Note: Minimum 2" overlap required to achieve loop tensile rating.

## TAK-TY® Hook & Loop Cable Ties – Plenum-Rated

- Soft, premium material is safe to use on high performance cabling protecting against over-tensioning
- UL Listed for use in plenum or air handling spaces (such as ceiling voids and underfloor areas) per NEC, Section 300-22 (C) and (D)
- Flammability rating: UL 94V-2

- Adjustable, releasable, and re-usable multiple times – ideal for applications requiring frequent moves, adds, or changes
- Operating temperature range: 0°F to 122°F (-18°C to 50°C)

Note: Minimum 2" overlap required to achieve loop tensile rating.

## TAK-TAPE™ Hook & Loop Cable Tie Rolls

- Strong, low profile, flexible material is safe to use on high performance cabling protecting against over-tensioning
- Adjustable, releasable, and re-usable
- Cost-effective for general purpose bundling
- Continuous rolls can be easily cut to size – PANDUIT cutter included with TTS-35RX0
- Handy, re-usable plastic case with TTS-20R0, keeps material clean

- Leaves no residue
- Available in black color
- Operating temperature range: -22°F to 194°F (-30°C to 90°C)
- Complementary mounts available, see page B2.10

Note: Minimum 2" overlap required to achieve loop tensile rating.

| Part Number | Length |      | Width |      | Max. Bundle Dia. |         | Min. Loop Tensile Str. |     | Std. Pkg. Qty. | Std. Ctn. Qty. |
|-------------|--------|------|-------|------|------------------|---------|------------------------|-----|----------------|----------------|
|             | Ft.    | m    | In.   | mm   | In.              | mm      | Lbs.                   | N   |                |                |
| TTS-20R0    | 20.0   | 6.1  | .750  | 19.1 | Various          | Various | 40                     | 178 | 1              | 10             |
| TTS-35R3-0  | 35.0   | 10.7 | .750  | 19.1 | Various          | Various | 40                     | 178 | 1              | 8              |
| TTS-35RX0   | 35.0   | 10.7 | .750  | 19.1 | Various          | Various | 40                     | 178 | 1              | 10             |

Std. Pkg. Qty. of TTS-35R3-0 denotes 1 package of three 35' rolls, TTS-35RX0 denotes 1 package of ten 35' rolls.

## ULTRA-CINCH™ Hook & Loop Cable Ties

- Unique material with hooks and loops on same side allows user to secure a greater range of bundle diameters, including smaller bundles
- Soft, premium material is safe to use on high performance cabling, protecting against over-tensioning
- Adjustable, releasable, and re-usable multiple times – ideal for applications requiring frequent moves, adds, or changes
- Low profile contoured cinch ring provides extra strength and bundle tightness while reducing overall bundle size
- Grommet (UGCTC and UGCTE styles) offers strength and assures reliable installations that resist pullout when bundling and mounting cables within cabinet applications
- Tapered tip facilitates easy, snag-free threading to speed installation
- Use flat-head screws for grommet applications shown below

Note: Minimum 2" overlap required to achieve loop tensile rating.

| Part Number   | Length |     | Width |      | Max. Bundle Dia. |     | Min. Loop Tensile Str. |     | Std. Pkg. Qty. | Std. Ctn. Qty. |

## Hot Stamping Service Custom Printed Cable Ties

Custom Hot Stamping Service provides a permanent, high quality imprinted message on *PANDUIT* cable ties and marker plates. Graphics, text, numbers and colors provide a variety of choices for customization.

Hot stamped cable ties and marker plates are typically used for identification, or for labeling critical components. *PANDUIT* cable ties, marker ties, marker plates and marker straps are available to suit your application.

Your choice of:

- Seven text colors (black, blue, green, red, yellow, orange, white)
- A variety of characters and fonts
- Sequential numbering
- Special customer logos and diagrams

### FAST! TWO WEEK LEAD TIME

Minimum Order: (Pieces/part number and message)

- 5,000 for Miniature, Intermediate, Standard and Heavy-Standard cross section cable ties
- 3,000 for Light-Heavy, Heavy, and Extra-Heavy cross section cable ties

For hot stamping orders and inquiries, please call 1-800-777-3300

### Cable Ties

- Used wherever you need to bundle wire, cable, hose or tubing
- A variety of colors for color-coding applications
- Cross Sections: Intermediate, Standard, Heavy-Standard, Light-Heavy, Heavy and Extra-Heavy

### Marker and Flag Ties

- Fasten and identify bundles at the same time
- A variety of colors for color-coding applications
- Cross Sections: Miniature and Standard

### Marker Plates

- Mount in any direction, either vertically or horizontally as flags, tags, or wrap-around identification plates.
- White or Weather Resistant black color
- Marker plate sizes:
 

|              |               |
|--------------|---------------|
| 1.50" x .75" | 2.50" x .75"  |
| 1.75" x .75" | 3.50" x .75"  |
| 2.00" x .75" | 2.50" x 1.75" |

### Cable Marker Straps

- Identify and code telephone and fiber optic cable – replaces costly and cumbersome lead marking tags
- Lightweight and easy to install
- Can be used as **wrap-around** or **flag** marker
- Also can be used in underground identification applications
- Polyethylene material available in red and gray
- Marking area: 1.50" x 2.62"

## Military Cross Reference

The PANDUIT cable ties and marker ties listed in the following tables meet all of the testing requirements of Aerospace Standard SAE-AS23190A (formerly MIL-S-23190E) and the dimensional requirements of Aerospace Standards SAE-AS33671 (formerly MS3367) and SAE-AS33681 (formerly MS3368).

| Cable Tie Cross Reference |         |                         |                   |             |                  |             |
|---------------------------|---------|-------------------------|-------------------|-------------|------------------|-------------|

## Installation Tools

The *PANDUIT* installation tools listed in the table below meet all of the testing requirements of MIL-T-81306 and the dimensional requirements of MS90387.

| Mil. Std. Part Number | PANDUIT P/N |
|-----------------------|-------------|
| MS90387-1             | GTS, GS2B   |
| MS90387-2             | GS4H        |

## Cable Tie Selection and Specification Guidelines

B1.  
Cable Ties

### Selecting the Proper Cable Tie Material for Your Application

B2.  
Cable  
Accessories

By using the information on our material selection chart on pages B1.2 and B1.3 as a guide, the user will be better equipped to select the best cable tie and material suited to perform its intended function over a long period of time.

B3.  
Stainless  
Steel Ties

For long life and dependable service, there are many factors to consider when selecting the proper cable tie for each application. Since it is impossible for *PANDUIT* to provide data on all the various combinations of conditions which may arise, it is suggested that this data be used as a guide. Sample cable ties should be tested under actual end-use conditions to determine the correct cable tie for the application.

C1.  
Wiring  
Duct

To select the optimum cable tie for a specific application, the chart on pages B1.2 and B1.3 can be used as a reference. First, determine the most critical design criteria and then read across the table to find which material is most suitable to meet this need. Next, review the other criteria by scanning in a vertical direction on the chart and then make your final selection.

C2.  
Surface  
Raceway

#### Example No. 1

| Application   | Selection   |
|---|---|
| The application requires high radiation (2 x 10 <sup>9</sup> rads) resistance and excellent resistance to hydrocarbons. | The best choice is PEEK, TEFZEL <sup>■</sup> , or HALAR <sup>▲</sup> . The price is higher than other materials, but all have high ratings in resistance to radiation and hydrocarbons. |

C3.  
Abrasion  
Protection

C4.  
Cable  
Management

#### Example No. 2

| Application   | Selection   |
|---|---|
| The application requires a low cost material, good ultraviolet resistance, and good resistance to acid rains. | The best choice is Weather Resistant Polypropylene. Price is medium, the UV rating is 6, and the acid resistance rating is 9. |

## Weathering

Over a period of time, ultraviolet light (a component of sunlight) attacks most plastic materials and reduces their properties by breaking the molecular chain. The material breakdown is accompanied by reductions in tensile strength and elongation, increased brittleness, color changes and loss of surface gloss.

Carbon black, which is used in *PANDUIT* nylon, polypropylene, and acetal cable ties, is one of the most effective stabilizers known today. A uniform dispersion of carbon black provides good ultraviolet light resistance without adversely affecting physical properties. The addition of carbon black, or any other ultraviolet light stabilizer, prolongs the useful outdoor life of plastic products, but it does not totally eliminate the destructive effects of the light. Some plastics, such as TEFZEL<sup>■</sup> or HALAR<sup>▲</sup>, are intrinsically very resistant to ultraviolet light and do not require stabilizing additives.

## Weathering Test Methods

In order to monitor the effects of ultraviolet light and the effectiveness of ultraviolet stabilizers, *PANDUIT*, in conformance with industry standards, adopted two methods of weatherability testing: Outdoor Aging and Accelerated Weather Aging.

## Outdoor Aging

The Outdoor Aging method is probably the best and most realistic method of the two. It is conducted in accordance with ASTM D 1435 Standard Practice for Outdoor Weathering of Plastics, and allows the material to be affected by not only ultraviolet light, but by all other outdoor elements as well. Although this may more closely approximate an actual application, two drawbacks do exist. The period of time required to produce property decay and material failure may be quite long, and varying adverse chemical environments cannot be tested.

## Accelerated Weather Aging

Accelerated weathering tests are conducted to estimate the rate of degradation due to a combination of ultraviolet light, temperature, and moisture. The methods used are in accordance with the following standards:

- ASTM D 1499, Operating Light and Water Exposure Apparatus (Carbon-Arc type) for exposure to plastics
- ASTM G 154-04, Operating Light and Water Exposure (Fluorescent UV Condensation type) for exposure of non-metallic materials

The condition specified in ASTM D 1499 utilizes a water spray and a carbon arc to simulate natural sunshine. The test chamber is operated 20 hrs/day with a two-hour cycle of 108 minutes of simulated sunshine and twelve minutes of sunshine and water spray. The temperature of a black body inside the chamber is approximately 63°C (145°F) during the “sunshine only” portion of the cycle. Humidity is not controlled inside the chamber.

The test chamber per ASTM G 154-04 uses fluorescent sun lamps to generate ultraviolet light only. A heated water pan produces condensation during a portion of the cycle. The daily cycle is composed of 20 hours of light followed by 4 hours of condensation. Black body temperatures during the light cycle are 50°C (122°F) and 40°C (104°F) during the condensation cycle.

*PANDUIT* has also designed a special chamber, which is used to simulate the effect of acid rain and ultraviolet light on cable tie materials. The effects of other common chemicals, such as road salt, are also evaluated in this chamber.

These methods are effective in quickly determining the ultraviolet light resistance of the various cable tie materials, but it must be emphasized that there are no exact correlations between accelerated aging and actual outdoor exposure.

## Weathering (continued)

B1.  
Cable Ties

### Material Failure Testing

Property decay can lead to three different modes of failure: loss of strength, loss of toughness, or change in appearance. The critical mode for any given application would depend upon the application and the requirements it places upon the material itself.

B2.  
Cable  
Accessories

Loss of strength is monitored by tensile testing samples of the material before and after it has been weathered. This test will reveal the decreasing strength accompanied by extended weathering.

B3.  
Stainless  
Steel Ties

Loss of toughness can be monitored by measuring changes in elongation and impact strength. As ultraviolet light exposure time increases and the material becomes brittle, its elongation and impact strength are greatly reduced. It is important to note that brittle failures can occur even when the tensile strength shows no change.

C1.  
Wiring  
Duct

Although change in appearance is normally not a failure mode for cable ties, the plastic does tend to discolor and lose its surface gloss as exposure increases. These changes can be measured by color difference using Adams units, which are similar to National Bureau of Standard units.

C2.  
Surface  
Raceway

PANDUIT has its own weathering test program to determine estimated life of various cable tie materials. This includes examining many previously aged samples obtained throughout the world.

C3.  
Abrasion  
Protection

In all cases, the amount of property decay increased with increasing exposure to ultraviolet light. The principal signs of degradation were found to be brittleness, cracking, and loss of surface gloss. It was also determined that the time for failure to occur was shorter than indicated from industry tests performed on material samples. This discrepancy is in part due to the fact that cable ties were tested in an end use, stressed condition, while most plastic resin suppliers conduct weathering tests using unstressed test bars.

C4.  
Cable  
Management

Five cable tie materials have superior ultraviolet light resistance: TEFZEL<sup>■</sup>, HALAR<sup>▲</sup>, Weather Resistant Acetal, Nylon 12 and Stainless Steel.

D1.  
Terminals

Determining the outdoor life expectancy of any material is difficult since there are other factors, besides ultraviolet light stability, which have to be considered. These factors are listed below and should be considered before specifying a cable tie material.

D2.  
Power  
Connectors

**Table A – External Factors That Affect the Life of a Cable Tie**

| Factor             | Effect on Cable Tie Life   |
|--------------------|--|
| Chemicals          | Applications which have chemicals present can reduce the life of a tie. <b>This is the most detrimental factor to the life of a tie.</b> |
| Bundle diameter    | As the bundle diameter is reduced, the tie has more bending stress. A thick strap on a small bundle diameter has more stress.            |
| Loading            | If the tie is under high loading, this will add additional stress on the tie body.   |
| Thickness          | A thinner tie will have a decreased life since surface cracks will penetrate the thickness of the tie faster.                            |
| Vibration          | Applications with high vibrations will cause impact, which will propagate any surface cracks.  |
| Degree of exposure | No shield or shade, southern exposure, higher altitudes and high temperatures, decrease the life of a cable tie.                         |
| Moisture           | High humidity plus high temperature can result in degradation due to hydrolysis in nylon.  |
| Galvanized metals  | Acid rain and acid moisture acting on galvanized metals release chemicals known to attack Nylon 6.6.                                     |

| Weathering Life Expectancy                               |         |
|--|---------|
| Material, Color (Part Number Suffix)                     | Years*  |
| Polypropylene, Green (109)                               | 1       |
| Nylon 6.6, Natural (No suffix)                           | 1 – 2   |
| Flame Retardant Nylon 6.6, Black (60)                    | 1 – 2   |
| Flame Retardant Nylon 6.6, Ivory (69)                    | 1 – 2   |
| Heat Stabilized Nylon 6.6, Natural (39)                  | 1 – 2   |
| PEEK, Polyetheretherketone, Translucent Brown (71)       | 1 – 2   |
| Heat Stabilized Nylon 6.6, Black (30)                    | 4 – 5   |
| Weather Resistant Polypropylene, Black (100)             | 7 – 9   |
| Weather Resistant Nylon 6.6, Black (0 and 00)            | 7 – 9   |
| Heat Stabilized Weather Resistant Nylon 6.6, Black (300) | 7 – 9   |
| Weather Resistant Nylon 12, Black (120)                  | 12 – 15 |
| TEFZEL <sup>■</sup> , Aqua Blue (76)                     | >15     |
| HALAR <sup>▲</sup> , Maroon (702Y)                       | >15     |
| Weather Resistant Acetal, Black                          | >20     |
| Stainless Steel  | >30     |

## Flammability

### Flammability

A number of test procedures have been developed which can be used for the evaluation and comparison of various materials to support combustion.

### UL 94 Vertical Burning Test

Samples of a material, with dimensions 127mm by 12.7mm and the thickness of the intended end use product, are tested in an unaged “as manufactured” state and in an aged state (seven days at 158°F, 70°C). The test requires the placement of a precisely controlled flame under a vertically supported specimen for a ten second period. The controlled flame is removed and the duration of flaming combustion of the specimen is recorded. When the flaming combustion of the specimen extinguishes, it is immediately subjected to an additional controlled flame exposure. After the additional ten seconds of exposure, the controlled flame is removed, and the duration of flaming combustion of the specimen is recorded. A piece of surgical cotton is placed under the specimen. If drips ignite the cotton, this fact is also recorded.

### Materials Classed 94V-0

Requirements:

- None of the specimens will burn with flaming combustion for more than ten seconds after either application of the controlled flame
- The total flaming combustion time will not exceed 50 seconds for the ten controlled flame applications (two controlled flame applications for each of the five specimens)
- None of the specimens will burn with flaming or glowing combustion up to the holding clamp
- None of the specimens will drip flaming particles that ignite the dry absorbent surgical cotton located 12 inches (305mm) below the test specimen
- None of the specimens will exhibit glowing combustion that persists for more than 30 seconds after the second removal of the controlled flame

### Materials Classed 94V-1

Requirements:

- None of the specimens will burn with flaming combustion for more than 30 seconds after either application of the controlled flame
- The total flaming combustion time will not exceed 250 seconds for the ten controlled flame applications (two controlled flame applications for each of the five specimens)
- None of the specimens will burn with flaming or glowing combustion up to the holding clamp
- Specimens may drip flaming particles which burn only briefly, and may not ignite the dry absorbent surgical cotton located 12 inches (305mm) below the test specimen
- None of the specimens will exhibit glowing combustion that persists for more than 60 seconds after the second removal of the controlled flame

### Materials Classed 94V-2

Requirements:

- None of the specimens will burn with flaming combustion for more than 30 seconds after either application of the controlled flame
- The total flaming combustion time will not exceed 250 seconds for the ten controlled flame applications (two controlled flame applications for each of the five specimens)
- None of the specimens will burn with flaming or glowing combustion up to the holding clamp
- Specimens may drip flaming particles which burn only briefly, and may ignite the dry absorbent surgical cotton placed 12 inches (305mm) below the test specimen
- None of the specimens will exhibit glowing combustion that persists for more than 60 seconds after the second removal of the controlled flame

## Flammability (continued)

### ASTM D 635

Samples of a material, with dimensions 125mm by 12.5mm and the thickness of the intended end use product, are tested in an unaged “as manufactured” state. A precisely controlled flame is applied to the specimen and a stopwatch is started. The flame is applied for 30 seconds. The stopwatch is stopped when burning or glowing combustion ceases or when the flame has proceeded to a mark 100mm from the free end. Ten specimens are tested. If any of the specimens burn to the 100mm mark, an additional ten specimens are tested.

#### Burning Rate

- If two or more specimens have burned to the 100mm mark then Average Burning Rate (cm/min.) shall be reported as the average of the burning rates of all specimens which have burned to the 100mm mark

#### Average Time of Burning and Average Extent of Burning

- Average time of burning and average extent of burning of the sample shall be reported if none of the ten samples or no more than one of the twenty specimens have burned to the 100mm mark

- Average Time of Burning (ATB):

$$ATB, s = \frac{\sum_0^N [time(sec) - 30(sec)]}{N}$$

N = Number of specimens tested  
Rounded to the nearest 5 seconds

- Average Extent of Burning (AEB):

$$AEB, mm = \frac{\sum_0^N [10(mm) - unburned length(mm)]}{N}$$

N = Number of specimens tested  
Rounded to the nearest 5mm

## Radiation/Moisture/Temperature/Tensile Strength

### Radiation

Installed cable ties of various materials have been exposed to different amounts of radiation to determine the maximum acceptable limit. These tests were conducted by *PANDUIT* to determine the acceptability for use in various areas of nuclear power plants (for radiation exposure accumulated over a 40 year life). See Cable Tie Selection Chart (pages B1.2 and B1.3) for radiation resistance rating.

### Moisture

Many plastics when exposed to high relative humidity absorb water and, as such, the tensile strength of the material can change dramatically. Nylon 6.6 when exposed to 100% relative humidity, will absorb as much as 8.5% water which will reduce tensile strength by 50% when compared to a dry cable tie. Polypropylene, HALAR<sup>▲</sup>, Type 12 Nylon, TEFZEL<sup>■</sup>, Acetal and PEEK are low water absorbing materials and, as such, the effect of water is minimal. See Cable Tie Selection Chart (pages B1.2 and B1.3) for moisture absorption.

### Proper Storage

Nylon 6.6 is a hygroscopic material (affected by atmospheric moisture variations). The optimum storage requirement for Nylon 6.6 cable ties is 73°F (± 15°F) and 50% RH (relative humidity) in sealed containers. Improper storage, especially in cold/dry conditions can result in moisture loss, which impedes cable tie performance. *PANDUIT* packaging provides Nylon 6.6 cable ties conditioned to 2.5% moisture added by weight in heavy-wall, polyethylene heat-sealed bags.

### Temperature

Plastic materials normally undergo property loss due to oxidation caused by exposure to high temperatures. The maximum continuous use temperature for cable tie materials depends upon the time at the elevated temperature as well as other environmental conditions. Initially, plastics become more flexible and weaker when exposed to high temperatures. After a period of time, oxidation may occur which will cause embrittlement, making plastic cable ties more susceptible to failure from impact and vibration.

The maximum continuous use temperature, is based on the UL Relative Thermal Index (mechanical without impact) as determined by UL per UL 746B. It is one indicator of a material's ability to retain a particular physical property when exposed to elevated temperatures over an extended period of time. It is based on the assumption that there is no loading, no chemical attack, and impact-free condition. The maximum continuous use temperatures for cable tie materials are listed in the Cable Tie Selection Chart (pages B1.2 and B1.3).

Low temperature exposure will also make most plastics more brittle during the exposure, but little property loss occurs when the material is returned to room temperatures. The minimum application use temperatures for cable tie materials are listed in the Cable Tie Selection Chart (pages B1.2 and B1.3).

### Tensile Strength

Most cable ties are selected based on material, length, and minimum loop tensile strength. Minimum loop tensile strength was established under SAE Aerospace Standard AS23190. Each cable tie cross section (SM = Subminiature, M = Miniature, I = Intermediate, S = Standard, HS = Heavy-Standard, LH = Light-Heavy, H = Heavy and EH = Extra-Heavy) has a different loop tensile strength when tested per AS23190.

The cable tie is first conditioned at 49°C (120°F), 20% relative humidity for 24 hours, then the cable tie is installed on a split mandrel and the halves of the mandrel separated at a rate of 1 inch (25.4mm) per minute. The separating force required to unlock or break the cable tie is the loop tensile strength. Loop tensile strength is dependent both on the locking design and the tensile strength (psi) of the material. As an example, the tensile strength of polypropylene material is approximately 1/2 to 1/3 of Nylon 6.6; thus the loop tensile strength of a given cross section tie made of polypropylene would be much less than a tie made of Nylon 6.6. This is another property to be considered when selecting a cable tie. The various representative loop tensile strengths are listed in the Cable Tie Selection Chart (pages B1.2 and B1.3).

### Halogen-Free

All *PANDUIT* cable ties (with the exception of TEFZEL<sup>■</sup> and HALAR<sup>▲</sup>) are halogen-free per IEC Specification 61249-2-21.

<sup>▲</sup>HALAR is a registered trademark of Solvay Solexis, Inc.

## Table C – Chemical Resistance Table

Many factors combine to determine the useful life of a cable tie material and none is as important as chemical exposure. Various chemicals will have different effects on plastics depending on such variables as chemical concentrations, temperature, stress and ultraviolet light. This table is an excellent guideline for the selection of the best cable tie material for various cable tie environments. It should be noted that the exposure for this chemical resistance chart is at 70°F (21°C).

### Resistance of *PANDUIT* cable tie materials to chemical attack at 70°F (21°C)

A = Excellent

B = Satisfactory

C = Slight Attack

D = Attacked

— = Not Tested

<sup>1</sup> = Pitting occurs under some conditions

<sup>2</sup> = Attack may occur if sulfuric acid present

Aq. = Aqueous

C.S. = Cold Saturated

| Agent                      | Percent Concentration | Nylon 6.6* | Nylon 12 | Polypropylene | TEFZEL <sup>■</sup> | HALAR <sup>▲</sup> | PEEK | 304 Stainless Steel | 316 Stainless Steel |

# NOTES

## MANUAL CABLE TIE INSTALLATION TOOLS

PANDUIT provides the most preferred hand-operated tools in the industry.

These versatile tools can be used for production, maintenance, or construction applications.

PANDUIT cable tie installation tools promote worker safety, help reduce downtime, improve productivity and provide the lowest total installed cost. As with all PANDUIT products, quality in design and production along with customer service excellence, are assured.

### Tool Highlights:

- Tool controlled tension and cut-off
  - Ergonomic tools are durable, lightweight, and easy to use
  - Manual tools
  - Pneumatic tools
- Installer controlled tension and cut-off
  - Large selection of tools available for complete range of PANDUIT cable ties
  - Cost-effective alternative for small volume applications

## A. System Overview Selection Guide – Hand Tools, Accessories, and Kits

### B1. Cable Ties Hand Tools

#### Manual

##### Tool Controlled Tension and Cut-Off

Recommended usage: under 50,000 ties/year

Typical applications: Low to medium volume tie usage in OEM, MRO, or construction

| Cross Section | Tool Part Number – Page B1.109 |      |      |     |      |       |
|---------------|--------------------------------|------|------|-----|------|-------|
|               | GTS                            | GTSL | GS2B | GTH | GS4H | GS4EH |
| SM            | X                              | X    |      |     |      |       |
| M             | X                              | X    | X    |     |      |       |
| I             | X                              | X    | X    |     |      |       |
| S             | X                              | X    | X    | X   | X    |       |

## Cable Tie Tools – Tool Controlled Tension and Cut-Off

GTS

- Used in production, maintenance, or construction applications
- Tool controlled tension provides flush cut-off and speeds installation to lower installed cost
- Lightweight and balanced
- Easy to change tension adjustment and easy to operate
- A combination of design, operation, and construction features, provides a long service life
- Replacement blades available, see page B1.112
- No special maintenance required

| ST3EH       | LH, H, EH            | Blue/Black | 9.0    | 256 | Durable, all steel construction with comfortable plastic handles.                               | 1              |
| STHV        | LH, H                | Yellow     | 12.0   | 341 | Durable all steel construction and "travel stop" to prevent pinched fingers.                    | 1              |

Cable tie cross section sizes: SM = Subminiature, M = Miniature, I = Intermediate, S = Standard, HS = Heavy-Standard, LH = Light-Heavy, H = Heavy, EH = Extra-Heavy.

**Installation Procedure (STS2/STH2/ST3EH):**  
Install cable tie around bundle and tension tie by squeezing tool handle. Reduce tension slightly and twist tool 1/4" turn either direction to cut off excess cable tie.

**Installation Procedure (STHV):**  
Install cable tie around bundle and tension tie by squeezing tool handle. A separate lever cuts off excess cable tie.

## Pneumatic Hand Tools – Tool Controlled Tension and Cut-Off

PTS

- Pneumatic, push button operation tensions and cuts off excess tie in a fraction of a second
- Durable, lightweight, ergonomic design is easy to operate and designed to reduce operator fatigue
- Easy to change tension adjustment
- Operates on non-lubricated air, without special maintenance

PTS

PTH

| Part Number | Used with Cable Ties | Weight |     | Part Features  | Std. Pkg. Qty. |
|-------------|----------------------|--------|-----|--|----------------|
|             |                      | Oz.    | g   |  |                |
| PTS         | SM, M, I, S          | 17.3   | 490 | Ergonomic design with impact resistant resin housing and black knob; replacement parts can be part of a scheduled maintenance program. | 1              |
| PTH         | S, HS, LH, H         | 32.0   | 907 | Ergonomic design with impact resistant resin housing and red knob; replacement parts can be part of a scheduled maintenance program.   | 1              |

Note: All tools require the PPH10 hose and PL289N1 filter/regulator for proper operation.

Cable tie cross section sizes: SM = Subminiature, M = Miniature, I = Intermediate, S = Standard, HS = Heavy-Standard, LH = Light-Heavy, H = Heavy.

## AUTOMATIC CABLE TIE INSTALLATION SYSTEMS

The complete line of *PANDUIT* automatic cable tie installation systems offers a superior solution for high volume harness, assembly, fastening and packaging applications. These ergonomic systems increase productivity, provide consistent performance, and reduce activities that lead to repetitive motion injuries. A variety of tool options provide users with flexible solutions for their unique application needs.

### System Highlights

Three systems improve productivity, reliability, and versatility:

- Install a cable tie in less than one second
- Multiple cable tie styles and sizes for maximum productivity
- Optional software for advanced system monitoring and performance

Combined, these innovations improve reliability, maximize productivity, and lower installed costs. As with all *PANDUIT* products, quality in design and production along with customer service excellence, are assured.

## Selection Guide – Automatic Installation Systems and Reel-Fed Cable Ties

Recommended for annual usage of over 250,000 cable ties/year  
Typical applications: High volume OEM/contract manufacturing

### PAT1M/PAT1.5M Systems

Tool Head for use with MINIATURE Cross Section

| Part Number | Description   | Page   |
|-------------|---|--------|
| PAT1M       | For miniature cross section up to .82" (21mm) bundle diameter | B1.115 |
| PAT1.5M     | For miniature cable ties up to 1.31" (33mm) bundle diameter   | B1.115 |

#### Dispenser

| Part Number | Description  | Page   |
|-------------|--|--------|
| PDM         | Stationary dispenser                                   | B1.115 |
| PDM-DI      | Dispenser and data interface software                  | B1.117 |
| PD-DIA      | Data interface accessory – software and interface card | B1.117 |

#### Transfer Hose

| Part Number | Description              | Page   |
|-------------|--------------------------|--------|
| PHM1        | 3.2' (1m) transfer hose  | B1.116 |
| PHM2        | 6.5' (2m) transfer hose  | B1.116 |
| PHM3        | 10.0' (3m) transfer hose | B1.116 |
| PHM4        | 13.1' (4m) transfer hose | B1.116 |

#### Optional System Accessories

| Part Number | Description                | Page   |
|-------------|----------------------------|--------|
| PDH10-37    | Air hose                   | B1.117 |
| PL283N1     | Filter/regulator           | B1.117 |

### Reel-Fed Cable Ties

STANDARD Cross Section

| Part Number  | Description                                  | Color   | Page   |
|--|--|---------|--------|
| <b>All-Nylon Tie – Max. Bundle Dia.: 2.00" (51mm), 50 lbs.</b> |  |         |        |
| PLT2S-VMR  | Nylon 6.6                                    | Natural | B1.120 |
| PLT2S-VMR0   | Weather Resistant Nylon 6.6                  | Black   | B1.120 |
| PLT2S-VMR00  | Weather Resistant Nylon 6.6 (Meets Mil Spec) | Black   | B1.120 |
| PLT2S-VMR30  | Heat Stabilized Nylon 6.6                    | Black   | B1.120 |

## System Selection Guide

| Maximum Bundle Dia. |    | Tool Head | Dispenser/Frame | Transfer Hose          | Reel-Fed Cable Ties     |
|---------------------|----|-----------|-----------------|------------------------|-------------------------|
| In.                 | mm |           |                 |                        |                         |
| .82                 | 21 | PAT1M     | PDM             | PHM1, PHM2, PHM3, PHM4 | BT1M-XMR, PLT1M-XMR     |
| 1.31                | 33 | PAT1.5M   | PDM             |                        | BT1.5M-XMR, PLT1.5M-XMR |
| 2.00                | 51 | PAT2S     | PDS/PDSF        | PHS2, PHS3             | PLT2S-VMR               |

## Tool Head – Three Sizes Accommodate a Wide Variety of Applications

- Ergonomic, lightweight design reduces operator fatigue and repetitive motion injuries – no counter balance required
- Right or left hand operation
- Durable, one-piece cable tie tip collector (for cut-off tips)
- Includes tension adjustment
- Built-in safety interlock prevents false triggering if anything obstructs jaw path

## Dispenser

- Microprocessor based controller monitors system performance through LCD display; provides production data and reporting, including error detection and cycle count for improved reliability
- Online HELP menu through LCD display in five languages (English, Spanish, German, Italian or French), is user-friendly for quick and simple training

PDM

PDS

| Part Number | Used with Tool Head | Description  | Std. Pkg. Qty. |
|-------------|---------------------|--|----------------|
| PDM         | PAT1M, PAT1.5M      | Stationary dispenser with electronic display. Online help menu through LCD display; multi-language; alarm sounds if error occurs. The system operates on 65 psig. (minimum) non-lubricated filtered air and 100 – 240 VAC/50 or 60 Hz – automatically adjusts within this range. | 1              |
| PDS         | PAT2S               |  | 1              |

## Data Interface Software and Ethernet Enabled Dispenser

*PANDUIT* exclusive Ethernet enabled dispenser and customized data interface software allow production personnel to monitor real-time data in a shop floor environment.

The Ethernet enabled dispenser provides a physical connection between the cable tie installation system and an Industrial Ethernet Network via an RJ45 connection and internal Ethernet card.

- Allows production and/or engineering personnel the capability to measure and track production performance such as job tracking, cycle counts, tool and dispenser serial numbers, and routine maintenance
- Provides the ability to send email notifications for specific system messages
- Data extraction and reporting capabilities on system performance through an exportable electronic log; helps identify operator training needs
- Ability to monitor alerts from remote desktop locations

| Part Number | Used with Dispenser | Description   | Std. Pkg. Qty. |
|-------------|---------------------|---|----------------|
| PDM-DI      | PDM                 | Ethernet enabled PDM dispenser and data interface software.                                     | 1              |
| PDS-DI      | PDS                 | Ethernet enabled PDS dispenser and data interface software.                                     | 1              |
| PD-DIA      | PDM/PDS             | Data interface accessory for existing PDM, PDS dispensers; software and network interface card. | 1              |

System  
Overview

**BT-XMR Reel-Fed Cable Ties**

- Continuously molded cable ties (5,000 ties/reel) provide continuous feeding for high productivity and reduced downtime due to fewer reel changes
- Reel-fed cable ties with exclusive stainless steel locking barb and 30 lbs. minimum loop tensile strength permit higher tension for demanding applications
- Metal locking barb and tie body design provide greater bundle tightness, reducing both rotational and lateral movement of the tie

A. System Overview

**PLT-VMR Reel-Fed Cable Ties**

- Continuously molded cable ties (2,500 ties/reel) provide continuous feeding for high productivity and reduced downtime due to fewer reel changes
- All-nylon, one-piece locking ties with 50 lbs. minimum loop tensile strength in standard cross section for larger bundles up to 2" diameter

## Tie Harness Mounts – Nylon and Heat Stabilized Nylon 6.6

- Designed to be attached to the wire harness during assembly
- Cable ties can be installed by hand or with *PANDUIT* automatic cable tie tools on page B1.115
- Used with harness board standoff posts, see page B2.51
- Available with or without corrugated tubing location tab
- Natural nylon material for indoor use
- Heat stabilized nylon material (30) for high temperature applications – indoor use

# NOTES

## CABLE ACCESSORIES

*PANDUIT* provides a comprehensive offering of cable accessories. These accessories are engineered to speed installation and lower installed costs for routing and managing cable. *PANDUIT* cable accessories are designed and manufactured to meet applicable quality standards including International, UL, Military, ISO and Aerospace.

- Largest selection of mounts, clips, and clamps for cable management
- *PANDUIT* cable ties and accessories can be used in a variety of applications and environments, providing the optimal cable management solution
- Installation methods include adhesive backed, user applied adhesive, screws, rivets or push barb

*PANDUIT* mounts, clips, and clamps are manufactured in an environment committed to design innovation, high quality, and knowledgeable service to our customers. Adhesive backed mounts provide a strong adhesive bond for long-term reliability. Cable clips offer a one-piece solution to save time and reduce inventory. Harness board accessories speed the routing and forming of cable bundles in the fabrication of a harness. They hold bundles at a uniform height above the board and are ideal for use with *PANDUIT* manual and automatic cable tie tooling.

Index

- Multiple cable tie bridges on one mount speeds installation of cable bundles by reducing the number of mounts applied
- Dovetail connection system provides alignment and a joining method to expand routing capabilities
- V-groove allows for easy separation into two mounts with two bridges each for separate applications

- 4-way cable tie bridges allow cable bundles to be secured perpendicular to the mount for even spacing or inline to secure a bundle in multiple places
- Large adhesive surface area provides long-term reliability and keeps product in place despite heavy load or high stress

## ® SUPER-GRIP® Adhesive Back Mounts

- Low profile design keeps bundle close to mounting surface
- Small overall size allows use where space is limited

• For use with SUPER-GRIP® Cable Ties found on page B1.38

## Snap-In Cable Tie Mounts – Mechanically Applied

- For use with *PANDUIT* Standard cross section cable ties including PLT1S, PLT1.5S, PLT2S, PRT1.5S and PRT2S
- Quickly route wire and cable where mounting holes cannot be drilled
- Integral retaining notch holds cable tie head in place below bundle
- For indoor use only
- Eliminates protruding tie head and facilitates one hand tie threading
- Material: ABS

## Epoxy Applied Cable Tie Mount Kits

B1.  
Cable Ties

- EMA Epoxy supplied in convenient two-compartment mixer cup with a mixer stick for each cup
- Each cup contains adhesive for three EMS or ASMS mounts
- Epoxy hardens in approximately five minutes
- After full 24 hour cure time, bonding strength will exceed 50 lbs. on a clean, grease-free surface
- Not recommended for use on polyethylene and polypropylene surfaces

‡Cable tie cross section sizes: M = Miniature, I = Intermediate, and S = Standard.

## Swivel Mounts

- The two mounts are securely fastened together with a connecting rivet that allows both mounts to rotate
- Can join bundles of cable, tubing, or hoses that may need to move or are not parallel
- Separates bundles to avoid abrasion
- Material: Weather Resistant Nylon 6.6

| Part Number | Used with Cable Ties‡       | Pull Apart Force |         | Color | Environment      | Std. Pkg. Qty. | Std. Ctn. Qty. |

## Tie Anchor Mounts

- Install perpendicular to the wire bundle
- Elongated slot permits cable bundle adjustment in application

- Low profile design keeps bundle close to mounting surface where overhead space is limited
- Material: Nylon 6.6

| Part Number | Used with Cable Ties‡ | Color   | Environment | Mounting Method | Std. Pkg. Qty. | Std. Ctn. Qty. |
|-------------|-----------------------|---------|-------------|-----------------|----------------|----------------|
| TA2-C       | M, I, S               | Natural | Indoors     | #10 (M5) Screw  | 100            | 1000           |
| TA2-M       |                       |         |             |                 | 1000           | 5000           |

‡Cable tie cross section sizes: M = Miniature, I = Intermediate, and S = Standard.

## Low Profile Mounts – Screw Applied

- Low profile design keeps bundle close to mounting surface
- Small overall size
- Install with a screw or rivet for a strong, secure installation

- For indoor use only
- Material: Nylon 6.6

LPMM

## Multiple Tie Plates

- Used to secure closely spaced wire bundles
- Low profile design keeps bundle close to mounting surface
- For indoor use only
- Material: Nylon 6.6

## Right Angle Mounts

- Hold cable bundles away from the sharp edges of bulkheads or cabinet holes
- Can also be used to mount cable bundles adjacent to any surface
- For indoor use only
- Material: Nylon 6.6

A. System Overview

## Metal Clip-On Mounts

- Clips on sheet metal edges for fast mounting of harness with cable ties
- Allows cable tie entry from all four sides for easy harness orientation
- For indoor use only
- Material: Zinc plated steel

‡Use with PLT2S-M30 cable tie.

D1. Terminals

## Push Mount Assemblies

D2. Power Connectors

- Cable tie/mount assemblies significantly reduce installation time compared to loose parts
- Fewer parts throughout the manufacturing/assembly process

- Heat Stabilized Nylon 6.6 standard on cable ties and mounts
- Maximum bundle diameter: 1.88 inches (4.8mm)

D3. Grounding Connectors

E1. Labeling Systems

E2. Labels

E3. Pre-Printed & Write-On Markers

E4. Permanent Identification

‡Push mount with PLT2S Cable Ties – 1.88"(4.8mm) – maximum bundle diameter

## Control Panel Mounts

- Installed behind control panel switch
- Ideal for high strain areas where cable is routed from panel to panel door
- Compatible with most control panel switch designs
- Indoor use only

## Flat PAN-POST™ Standoffs

- Standard EIA hole spacing allows product to be mounted with user supplied screws up to 1/4" diameter
- Organize cables in standard cabinets and racks
- Mounting method: 1/4" (M6) screw
- Use where space is limited
- For indoor use only

## Flat Cable Mounting System – FCB Base and FCPI Plate

- Secures stacked cables, folds, and breakouts, as well as laminated and molded bus bars
- For indoor use only
- Use one base, one corresponding size plate (FCPI), and one intermediate cross section cable tie
- Material: Nylon 6.6

FCPI

## Cable Spacer Cross

- Connects two bundles at 90°
- Separates bundles to prevent abrasion

- Dual cradle design stabilizes cable bundle

‡Cable tie cross section sizes: M = Miniature, I = Intermediate, and S = Standard.

## Stackable Aerial Cable Spacer

- Greater resistance to damage caused by ultraviolet light – indoor or outdoor use
- Each spacer snaps into another to increase spacer heights by 1/2" increments

- Designed for use in parallel or perpendicular applications
- For use with *DURA-TY™* Cable Ties shown on page B1.53 or *PAN-STEEL®* Metal Locking Ties on page B3.7.

A. System Overview

## Aerial Support Ties – Weather Resistant Polypropylene

B1. Cable Ties

- Designed to attach coax or telephone cable to the 1/4" (6.4mm) or 5/16" (7.9mm) support strand to form the expansion loop and keep equipment and cables clear of pole hardware
- One-piece construction with integral 1/2" (12.7mm) spacer reduces inventory costs of separate spacer and bands, and installs faster to lower installed cost
- Releasable and re-usable
- Hand install only

## Marker Plates – Loose Piece

- Install as flags, tags, or wrap-around identification plates to clearly identify all wire harnesses
- Use with nylon marking pens for an easy and economic alternative to identify wire harnesses
- Available in black or white to match the wire harness
- Thickness: .02 inches (0.5mm)

A. System Overview

## Cable and Wire Mounting Devices (used without cable ties)

B1. Cable Ties

B2. Cable Accessories

B3. Stainless Steel Ties

Wiring accessories are an integral part of the *PANDUIT* comprehensive selection of wire management products.

These accessories are one piece solutions that help provide the lowest installed cost for controlling, mounting, and protecting wire and cable. Mounting methods include:

- Adhesive-backed
- Screw applied
- Rivet applied
- Push mounts

C1. Wiring Duct

C2. Surface Raceway

## Adhesive Backed Mounting Devices

### Faster Liner Removal Speeds Installation and Lowers Installed Cost

- The adhesive backed mounts are offered either as one or two mounts per liner
- The 2-up mounts are easily removed by bending the mounts away from the liner
- The individual mounts have a convenient tear tab for quick removal

C3. Abrasion Protection

C4. Cable Management

## **CLINCHER™ Adjustable Releasable Clamp**

- Adjustable clamp designed to contain a range of cable bundle diameters
- Latch can be released to provide access to cable bundles
- For indoor use only
- Material: Polypropylene

## Latching Wire Clips

B1. Cable Ties

- Route and secure cords and cables
- Convenient releasable latch
- Available in six sizes with releasable latch

- Push barb parts are for use with a max panel thickness of .11 inches (2.7mm) and a hole diameter of .22 inches (5.6mm)
- For indoor use only
- Material: Nylon 6.6

A. System Overview

## Latching Flat Cable Mounts

B1. Cable Ties

- Available in four sizes with a stack height of .17 inches (4.3mm) to accommodate different flat cable widths
- Low profile design holds wires, cables, and tubing
- Convenient releasable latch
- Large mounting base for high bonding strength
- For indoor use only
- Material: Nylon 6.6

All parts listed are also available in black weather resistant material (add suffix 0). Bulk package only.

## Wire Retainers

- Wires slide into the clip and are held in place by tension
- Low profile design holds wires, cables, and tubing
- Funnel entry design allows for easy insertion of cords and cables

## Tack Clips

- Clips secure cords, cables, and tubing
- Suitable for outdoor use
- Hardened steel nail securely mounts to wooden surfaces
- Material: Weather Resistant Polypropylene

C4. Cable Management

## Wire Standoffs

- For retaining wires, cable, components or tubing away from panel or conductive chassis
- Design of wing provides added stability
- Material: Nylon 6.6
- Finger grip flanges can be easily locked or unlocked for revisions
- Indoor use only

## Harness Board Accessories

PANDUIT harness board accessories provide fast routing and forming of wires in harness fabrication. They hold the wires off the harness board at a uniform height for easy application of cable ties. The accessories are designed for use with various PANDUIT cable tie installation tools. To maintain the harness at a uniform height of approx. 1.33 inches (33.8mm) (at the center of the harness) above the board, use RER Elastic Retainers, BR.75-E6 or BR.5-E6, CPH.75-S8, TJF and SHH1-S8 or SHH3-S8 harness board accessories. This height is suitable for use with PAT1M Automatic Cable Tie Installation Tool.

## Elastic Retainers

- Cable bundles are formed as individual wires are inserted
- Completed bundles can be easily removed
- The elastic band is replaceable
- For indoor use only

### Replacement Elastic

| Part Number | Pkg. Qty. |
|-------------|-----------|
| RER.5E-X    | 10        |
| RER.75E-X   | 10        |
| RER1.25E-X  | 10        |

For economy, the elastic band can be replaced in the RER Elastic Retainers without removing the RER base.

A. System Overview

## Fanning Strip System

- Holds wires in a specific orientation
- No sharp edges to damage wire insulation
- Will accept wires up to 18 AWG
- Fanning strip can remain as part of completed harness

B1. Cable Ties

B2. Cable Accessories

B3. Stainless Steel Ties

C1. Wiring Duct

C2. Surface Raceway

| Part Number | Material  | Color   | Mounting Method     | Std. Pkg. Qty. | Std. Ctn. Qty. |
|-------------|-----------|---------|---------------------|----------------|----------------|
| FS156-C     | Nylon 6.6 | Natural | —                   | 100            | 1000           |
| FSH40-X     | ABS       | Black   | Four #8 (M4) Screws | 10             | 100            |
| FSHH-X      |           |         | Two #8 (M4) Screws  | 10             | 100            |

C3. Abrasion Protection

C4. Cable Management

## Spring Wire Breakout System

- Harness board spring and spring holder holds wire ends secure while harness is being fabricated
- Wires simply pull out from spring when harness is removed
- Each SHH Spring Holder is supplied with one rigid wire piece to hold the spring laterally and two #8 (M4), 2 inch (50.8mm) hex head wood screws

## Selection and Use of Adhesive Mounts

PANDUIT adhesive mounts provide a quick, economical, and dependable method of supporting, routing, and protecting wires or cables. Some are used with PANDUIT cable ties and others can be used without cable ties. Adhesive backed mounts adhere to a variety of surfaces. This alternative to mechanical fasteners offers the advantage of lower installed cost with safe, easy to use, quality products.

## Applications

- To route wires in control panels and switchboards
- To support bundles of wires away from moving mechanical devices
- Routing and harnessing cables, both indoors and out, to prevent safety hazards
- To organize flat cables in many locations with low profile construction
- Ideal for supporting wire bundles where holes cannot be made in the substrate
- To separate groups of wires for identification

## Selection and Use of Adhesive Mounts (continued)

### General Mount Guidelines

PANDUIT pressure sensitive adhesive (foam tape) mounts are intended to secure wire bundles or other light objects to smooth surfaces. These mounts are not designed to support excessive loads and should not be used when the maximum expected load exceeds the rated capacity of the mount.

### Choosing the Right Adhesive

PANDUIT offers two standard pressure sensitive foam tapes which are available on most adhesive backed wiring accessories products. The general purpose tape is produced with a rubber based adhesive and is identified by an “-A” in the part number. This tape develops its strength extremely fast and can be used in environments with temperatures ranging from -20°F (-40°C) to +120°F (49°C). It is recommended that rubber based adhesive mounts dwell 2 hours after installation, prior to loading. Rubber based adhesive tape is the best choice for most adhesive mount applications, including powder coated surfaces.

Acrylic based adhesive tape is also available and is identified by an “-AT” in the part number. This tape is for use in environments where continuous exposure to temperatures as high as 180°F (82°C) is possible. Acrylic based adhesive develops its maximum strength over a longer period of time than rubber based adhesive. It is recommended that acrylic adhesive mounts dwell 8 hours after installation, prior to loading. Acrylic based adhesive tape is a good choice for environments with prolonged exposure to UV rays or temperatures above 120°F (49°C).

PANDUIT also offers a 2-part epoxy for use in applications where excessive loading is required, or where the surface to which the mount must be applied is porous rather than smooth. PANDUIT EMA adhesive is a 2-part epoxy cement which is packaged in convenient mixer cups containing an equal amount of resin and hardener. Peel the protective covering off and pop the center of the cup in to form a mixing bowl. Each cup is supplied with a mixer stick and contains enough epoxy to properly apply three EMS mounts. The resin and hardener should be thoroughly mixed together until the epoxy is a consistent and uniform color. The mixer stick can then be used to apply the adhesive to the mount. The epoxy should be forced into the grooves on the bottom of the mount to obtain optimum bond performance. The mount should be applied to the surface with light pressure and a back-and-forth twisting motion. Hardening of the epoxy begins five minutes after mixing at room temperature.

### Application Chart

Since PANDUIT manufactures adhesive backed mounts with a variety of adhesive types, this chart should be used as a guideline for choosing the best adhesive for often-encountered conditions. Each type of adhesive is rated good, fair or poor for some specific mounting surfaces and/or chemical environments.

| Surfaces                 | Rubber Based Foam Tape Mounts | Acrylic Based Foam Tape Mounts | Epoxy Applied Adhesive Mounts |
|--------------------------|-------------------------------|--------------------------------|-------------------------------|
| Plastics                 | Good                          | Good                           | Good                          |
| Wood                     | Good                          | Good                           | Good                          |
| Glass                    | Fair                          | Good                           | Good                          |
| Painted Surfaces         | Good                          | Good                           | Fair                          |
| Powder Coating           | Good                          | Fair                           | Good                          |
| Metal                    | Good <sup>1</sup>             | Good <sup>1</sup>              | Good                          |
| Paper                    | Good                          | Good                           | Fair                          |
| Concrete, Stone, Masonry | Not Recommended               | Not Recommended                | Good                          |
| Chemical Resistance      |                               |                                |                               |
| Water                    | Good                          | Good                           | Poor                          |
| Oil                      | Poor                          | Fair <sup>3</sup>              | Good                          |
| Gasoline                 | Poor                          | Fair <sup>3</sup>              | Fair                          |
| Dilute Acids             | Poor                          | Fair <sup>3</sup>              | Fair                          |
| Dilute Alkalis           | Good                          | Fair <sup>3</sup>              | Fair                          |
| Organic Solvents         | Poor                          | Fair <sup>3</sup>              | Not Recommended               |
| Outdoor Exposure         | Not Recommended               | Good                           | Good <sup>2</sup>             |

1. Not recommended for use on copper or brass.
2. Mounts manufactured from outdoor material only. For specific applications, individual testing prior to extensive use is suggested.
3. Depends on concentration, exposure time, and chemical composition.

### Mount Spacing

To determine the number of mounts to use in a given application, the following formula can be used as a guideline:

$$\frac{\text{Cable or weight (Lbs./ft.)}}{\text{Static Load rating of Mount (Lbs./mt.)}} = \text{Spacing} \frac{\text{Mounts}}{\text{Ft.}}$$

## Selection and Use of Adhesive Mounts (continued)

B1. Cable Ties

### Surface Preparation

For best results, *PANDUIT* adhesive mounts should be applied to clean, dry, grease-free surfaces. We recommend that the surface be cleaned prior to mount installation. For rubber and acrylic based foam tape adhesives, a blend of isopropyl alcohol and water 50/50 may be used to clean most surfaces.

B2. Cable Accessories

For epoxy type adhesives, especially masonry surfaces, be sure to clean all loose particles away before mount installation. Some surface abrasion is recommended to achieve maximum strength. A light rubbing with medium grit emery cloth or sandpaper is best. Wash after abrading.

B3. Stainless Steel Ties

### Proper Installation Techniques For Pressure Sensitive Adhesive Mounts

For proper installation of adhesive mounts with foam tape, simply remove the release liner and place the mount in the desired location. Avoid touching the adhesive prior to positioning the mount. Apply firm pressure to the mount for 5 seconds to insure proper adhesion.

C1. Wiring Duct

C2. Surface Raceway

C3. Abrasion Protection

C4. Cable Management

1) Clean surface with a clean cloth and isopropyl alcohol.

2) Allow surface to air dry.

3) Remove the release liner, being careful not to touch the adhesive.

4) Apply full thumb pressure for at least 5 seconds.

5) Allow mount to properly dwell.

D1. Terminals

### Proper Storage Conditions

All *PANDUIT* adhesive products have an expiration date printed on the package label. Use the following storage guidelines:

D2. Power Connectors

1. For rubber and acrylic based foam tape adhesives, store in temperatures of 70°F (21°C) and 45% Relative Humidity (R.H.).

D3. Grounding Connectors

2. For epoxy type adhesives, store in temperatures of 40°F (4°C) to 75°F (25°C) and relative humidity not in excess of 45%. Storage in opened containers is not recommended. Using the guidelines above, the shelf life of foam tape is 3 years. Shelf life of epoxy is 1 year. Deviation from the recommended storage conditions may reduce the shelf life or adhesive strength. In any case, adhesive products should never be stored near heating vents or other heat sources, and storage in lower temperatures than those recommended may increase the shelf life.

E1. Labeling Systems

E2. Labels

### Stock Rotation

Adhesive mount inventory should be rotated in order to insure the quality of the adhesive foam tape. Each package of *PANDUIT* adhesive backed mounts has a Quality Control Number and a best-if-used-by date on the package label. The best-if-used-by date provides the customer with an accurate way to control the rotation of inventory, and, as is the case with all *PANDUIT* products, the Quality Control Number provides complete traceability for all components that go into a specific production run of product.

F. Index

### Mount Removal

There is no simple or easy method for removing *PANDUIT* adhesives. A thin wire or razor blade can be moved in between the surfaces when removing foam tape mounts; however, the adhesive residue will remain on the surface. Epoxy adhesives may be removed with a commercial paint stripping solution.

## PAN-STEEL® SYSTEM

The *PAN-STEEL*® System provides a strong, durable method of bundling and mechanical fastening, for all indoor, outdoor, and underground (including direct burial) applications. The ties are designed for use in critical applications where strength, vibration, radiation, weathering, corrosion and temperature extremes are a factor.

- Patented locking head design assures locking in any position, with a high rated loop tensile strength for a durable solution that delivers an extra margin of safety
- 304 or 316 grade stainless steel provides a strong, long-lasting method of bundling and mechanical fastening in harsh environments
- Accessories available to protect, speed, and simplify the mounting of wires, cable, and tubing with *PANDUIT*® *PAN-STEEL*® Stainless Steel Cable Ties
- Complete line of manual and pneumatic installation tools available with controlled tension and automatic cut-off for lower installed cost
- Large selection of stainless steel marker plates, tags, and cable ties to deliver maximum design flexibility to match your specific application requirements; for details, refer to Permanent Identification Section E4

*PANDUIT* continues to develop stainless steel solutions for harsh environment applications by solving customer problems with innovative products and reliable tooling to achieve lowest installed cost.

## PAN-STEEL® Products Overview (continued)

### Installation Tools

Pages B3.14 – B3.16, B3.20, B3.26

- Used in production, maintenance, and construction applications
- Full line of lightweight, ergonomic hand tools
- Highest reliability in the industry
- Flush cut-off of ties limits exposure to sharp edges

### PAN-STEEL® Strapping

Pages B3.21 – B3.25

- Fold over design provides high retained tension
- Cut end is locked inside low profile buckle – no sharp edges
- Coil-in-box packaging option for job site versatility with minimum inventory
- Coated design option for additional edge protection

### Accessories

Pages B3.26 – B3.29

- Cushion sleeving provides full separation between ties and bundles
- Multiple mount options for range of applications and panel thicknesses
- Mounts secure ties to structure quickly and easily

### Permanent Identification Products

Pages E4.1 – E4.6

- Withstand the test of time and provide legibility in harsh environments
- Factory Custom Marking Service creates custom embossed or laser etched metal plates, tags, and ties
- Portable marking tools for quick and easy on-site identification
- Large selection delivers maximum design flexibility

### PAN-STEEL® Self-Locking Cable Ties – MLT Series

- Self-locking head design speeds installation and locks into place at any length along the tie body
- Provides a strong, durable method of cable bundling
- Can be used in a wide range of indoor, outdoor, and underground (including direct burial) applications
- Smooth surfaces and rounded edges assures cable protection and worker safety
- Available in AISI 304 stainless steel for general-purpose applications
- Available in AISI 316 stainless steel for the most corrosive environments

A. System Overview

## PAN-STEEL® Polyester Fully Coated Cable Ties – MLTFC Series

B1. Cable Ties

- Self-locking head design speeds installation and locks into place at any length along the tie body
- Polyester coating provides additional edge protection and prevents corrosion between dissimilar metals
- AISI 316 stainless steel for the most corrosive environments
- Available in standard, heavy, extra-heavy and super-heavy cross sections
- UV resistant, low smoke, halogen-free material
- Temperature tolerance -40°F (-40°C) to 302°F (150°C)

## PAN-STEEL® Nylon 11 Selectively Coated Cable Ties – MLTC Series

- Self-locking head design speeds installation and locks into place at any length along the tie body
- Nylon 11 coating provides additional edge protection and prevents corrosion between dissimilar metals
- AISI 316 stainless steel for the most corrosive environments
- Available in heavy cross section
- UV resistant, low smoke, halogen-free material
- Temperature tolerance -40°F (-40°C) to 285°F (140°C)

B3. Stainless Steel Ties

C1. Wiring Duct

- Self-locking head design speeds installation and locks into place at any length along the tie body
- Lightweight, aluminum construction for flexibility and ease of handling
- Five color options in addition to natural aluminum finish for color-coding applications
- Smooth surfaces and rounded edges assures cable protection and worker safety
- For use with PAN-ALUM™ Marker Plates on page E4.5, for fast installation at the lowest installed cost

\*Per SAE Standard AS23190/3 (formerly MIL). For additional details, refer to page B3.32.

\*\*For information on installation tools, refer to page B3.15.

## PAN-STEEL® Double Wrapped Cable Ties – MLTD Series

- Self-locking head design speeds installation and locks into place at any length along the tie body
- Cable tie body passes through the head two times for additional strength
- Available in heavy, extra-heavy, and super-heavy cross sections
- Available in AISI 304 stainless steel for general-purpose applications
- Available in AISI 316 stainless steel for the most corrosive environments
- Super-heavy double wrapped tested for short circuit applications up to 71.5 kA

A. System Overview

## PAN-STEEL® Custom Length Banding – MBS, MBH, MBEH and MBSH Series

B1. Cable Ties

B2. Cable Accessories

B3. Stainless Steel Ties

- For applications that require various bundle diameters
- Supplied in reels of 82.50 feet (25.0m), 200.00 feet (60.9m), 250.00 feet (76.2m) or 1000.00 feet (304.8m)
- Provides job site versatility with minimum inventory
- Packaging speeds removal of steel and includes bundle diameter cut-off guide
- Available in AISI 304 stainless steel for general-purpose applications
- Available in AISI 316 stainless steel for the most corrosive environments

### Polyester coating (optional):

- Polyester coating provides additional edge protection and prevents corrosion between dissimilar metals
- UV resistant, low smoke, halogen-free material
- Temperature tolerance -40°F (-40°C) to 302°F (150°C)
- AISI 316 stainless steel for the most corrosive environments

\*Other lengths available, contact PANDUIT Customer Service.

\*\*Per SAE Standard AS23190/3 (formerly MIL). For additional details, refer to page B3.32.

\*\*\*For more information on installation tools, refer to pages B3.14 – B3.16.

^Base material less coating.

‡Order in number of reels required.

To determine the proper amount of banding required, use the following formula:

**Calculate S and H Cross Section** Diameter inches (mm) x 3.14 + 3 inches (76mm)

**Calculate EH and SH Cross Section** Diameter inches (mm) x 3.14 + 4.5 inches (114mm)

## PAN-STEEL® Custom Length Banding Heads – MTH Series

- Self-locking head design speeds installation and locks into place at any length along the tie body

1) Take one end of the cut banding and bend back 1/2" (13mm).

2) Take a self-locking head and slide it the entire length of the band until it reaches the bend.

3) Bend tail flat against bottom of banding head to complete assembly.

A. System Overview

## GS4MT Hand Operated Installation Tool

B1. Cable Ties

- Single handle operation for fast installation
- Cable tie side entry for immediate positioning of tie and tool
- Controlled tension, fully adjustable
- Easy removal of excess tie

- Qualified product listed per MIL Standard MS90387-3
- Automatically tensions and cuts off tie when predetermined tension is reached
- Installs standard .18 inch (4.6mm), light-heavy .25 inch (6.4mm) and heavy .31 inch (7.9mm) cross section ties

B2. Cable Accessories

B3. Stainless Steel Ties

GS4MT

| Part Number    | Part Description  | Std. Pkg. Qty. |
|----------------|---|----------------|
| <b>GS4MT</b>   | Used with standard, light-heavy, and heavy cross section <i>PAN-STEEL</i> ® type MLT ties, type MLTC/MLTFC coated ties, and type MLTDH double wrapped ties. | 1              |
| <b>K4M-BLD</b> | Replacement cutter blade for GS4MT.   | 1              |
| <b>K4MTG</b>   | Replacement tension gripper for GS4MT.  | 1              |
| <b>CAMT</b>    | Cut-off accessory. Use this accessory with GS4MT tool to cut MBH or MBS continuous banding. Accessory drops in place for use.                               | 1              |

## Tool Tension Locking Kits

- For applications requiring a locking device on either the selector knob (one cross section size and tension only) or tension level adjustment (but allow cross section size changes)

D3. Grounding Connectors

E1. Labeling Systems

E2. Labels

To lock selector knob and tension level.

E3. Pre-Printed & Write-On Markers

E4. Permanent Identification

E5. Lockout/Tagout & Safety Solutions

To lock fine adjustment.

| <b>TTLK3</b> | Tool tension locking kit for GS4MT and PPTMT installation tools. | 1              |

## ST2MT Installation Tool

- Cable tie side entry for immediate positioning of tie and tool
- One hand operation – lightweight
- Easy removal of excess tie
- Tool tension is controlled by installer – twist action cut-off
- Rugged, lightweight, easy-to-operate pliers-type tool provides mechanical advantage

| Part Number  | Part Description  | Std. Pkg. Qty. |
|--------------|---|----------------|
| <b>ST2MT</b> | Used with standard, light-heavy, heavy and extra-heavy cross section <i>PAN-STEEL</i> ® type MLT ties, type MLTC/MLTFC coated ties, and type MLTDH double wrapped ties. | 1              |

## RT1HT and RT1HTN Installation Tools

- Cable tie side entry for immediate positioning of tie and tool
- One or two hand tensioning with multi-position rear handle
- Adjustable tension control
- Lever actuated cut-off
- Easy removal of excess tie
- Ratchet style tool for high tension
- Narrow nose tool design option available for applications requiring installations in tight confined spaces

RT1HT

RT1HTN

| Part Number   | Part Description  | Std. Pkg. Qty. |
|---------------|---|----------------|
| <b>RT1HT</b>  | Used with extra-heavy .50" (12.7mm) and super-heavy .63" (15.9mm) cross section <i>PAN-STEEL</i> ® type MLT and MLTFC ties. Width of tool nose 2.60" (66.0mm).                                  | 1              |
| <b>RT1HTN</b> | Narrow nose installation tool for use with extra-heavy .50" (12.7mm) and super-heavy .63" (15.9mm) cross section <i>PAN-STEEL</i> ® type MLT and MLTFC ties. Width of tool nose 1.06" (27.0mm). | 1              |

## HTMT Installation Tool

- Economical
- Coiled tie end remaining after tensioning assures a safe end
- Manual tension, no cut-off
- Installs ties parallel to the bundle

| Part Number | Part Description  | Std. Pkg. Qty. |
|-------------|---|----------------|

| Part Number | Part Description   | Std. Pkg. Qty. |
|-------------|--|----------------|
| PPTMT       | Pneumatic hand tool used with <i>PAN-STEEL</i> type MLT ties, type MLTC/MLTFC coated ties, and type MLTDH double wrapped ties. Automatically tensions and cuts off tie when predetermined tension is reached, providing more reliable and consistent installations. Ideal for high production applications. Installs standard .18" (4.6mm), light-heavy .25" (6.4mm), and heavy .31" (7.9mm) cross section ties. | 1              |
| PPH10       | 10.0' (3m) hose assembly (regulator to tool); includes a .13" (3.3mm) NPT male connector (to regulator) and .13" (3.3mm) female quick disconnect (to tool).  | 1              |
| PL289N1     | Filter/regulator .5 micron element, regulated range 3 – 100 psig, features .13" (3.3mm) NPT female output port (to hose PPH10) and .25" (6.4mm) male quick disconnect to source air line.  | 1              |
| KPPTMTG     | Replacement gripper kit for PPTMT.   | 1              |
| KPPTMTB     | Replacement blade kit for PPTMT.   | 1              |

## Adjustment Features for PPTMT and GS4MT Tools\*

### Fast and Easy Selection

The cross section of the cable tie being installed is clearly indicated on the knob. To change, simply flip knob to proper cross section indicator.

### Tension Indicator

Each cross section of cable ties can be installed with a variety of tensions to meet the application. The proper tensions (listed on *PANDUIT* cable tie packages) are clearly marked with this indicator.

### To Change the Tension:

Turn clockwise to increase.

Turn counterclockwise to decrease.

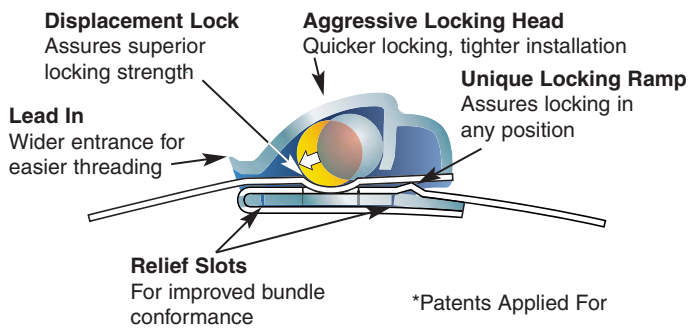

\*For information on GS4MT installation tool, refer to page B3.14.

## Features and Benefits – PAN-STEEL® Retained Tension Ties – MRT/MRS Series

PANDUIT® PAN-STEEL® Retained Tension Ties are engineered for safety, productivity, and durability by providing round edges and smooth surfaces, easy threading, high loop tensile strength and tight clamping.

### PANDUIT Retained Tension Tie Technology

#### Features of Retained Tension Ties (MRT and MRS Series)\*

#### Additional Features of 360° Radial Seal Retained Tension Ties (MRS Series Only)\*

### NEW! PAN-STEEL® Retained Tension Ties – MRT Series

- Provide tight bundling of armored cables, pipes, conduit and other rigid materials in harsh conditions for a reliable, easy to install fastening solution
- Self-locking cable tie design locks into place at any length along the tie body, unlike fixed diameter band clamps
- Smooth surfaces and rounded edges assures cable protection and worker safety
- Available in AISI 304 stainless steel for general-purpose applications
- Available in AISI 316 stainless steel for the most corrosive environments

## Part Number System for PAN-STEEL® 360° Radial Seal Retained Tension Ties – MRS Series

## PAN-STEEL® 360° Radial Seal Retained Tension Ties – MRS Series

- 360° radial seal eliminates gaps under the head of the tie to provide a completely sealed installation
- Self-locking cable tie design locks into place at any length along the tie body, unlike fixed diameter band clamps
- Available in AISI 304 stainless steel for general-purpose applications
- Available in AISI 316 stainless steel for the most corrosive environments

## Retained Tension Installation Tools

- Adjustable detent mechanism provides user pre-set controlled tension for repeatable installations and maximum reliability
- Smooth cable tie cut-off eliminates burrs or sharp edges after installation to deliver added bundle protection and job site safety

- Tie tensioning mechanism provides improved durability compared to conventional gripper style tools
- Change over kits available to allow for installation of all tie cross sections with one tool

| Part Number    | Part Description  | Std. Pkg. Qty. |
|----------------|---|----------------|
| <b>MTRTH</b>   | Retained tension installation tool for use with <i>PAN-STEEL</i> ® heavy cross section MRT and MRS style ties.                    | 1              |
| <b>MTRTLS</b>  | Retained tension installation tool for use with <i>PAN-STEEL</i> ® light-heavy and standard cross section MRT and MRS style ties. | 1              |
| <b>KMTRTH</b>  | Change over kits allow for installation of heavy cross section MRT and MRS style ties in MTRTLS tools.                            | 1              |
| <b>KMTRTLS</b> | Change over kits allow for installation of light-heavy and standard cross section MRT and MRS style ties in MTRTH tools.          | 1              |

Note: For high volume applications, contact *PANDUIT* Customer Service.

## MRT/MRS Installation Steps

1) Place retained tension tie around material, insert tail of tie through metal locking head. Pull tie tight by hand.

2) Insert tail of retained tension tie into nose of tool tensioning slot.

3) Squeeze tension handle until preset tension is reached.

4) Grasp tension handle lever and move forward, setting ball and cutting tie.

5) Remove tool, installation complete. Provides safe, flush cut-off.

## Features and Benefits – PAN-STEEL® Strapping System

The PANDUIT® PAN-STEEL® Stainless Steel Strapping is the ultimate solution for strapping applications. The buckle design and tension controlled installation tool offer a quick and safe installation for all harsh environments. Available in three widths 3/8" (9.5mm), 1/2" (12.7mm) and 5/8" (15.9mm) in base 304 or 316 stainless steel with a temperature range of -112°F (-80°C) to 1000°F (538°C).

### Unique Locking Method\*

\*Patents applied for

Hand operated installation tool used with all widths of PANDUIT® PAN-STEEL® Strapping. Tensions, cuts strapping, and secures the buckle tab. Easy to operate. See page B3.26.

Custom length strapping available for applications that require various bundle diameters, to provide job safety and versatility with minimum inventory. See page B3.25.

## The PANDUIT Method Reduces Installation Time

B1. Cable Ties

B2. Cable Accessories

B3. Stainless Steel Ties

1) Place strap around the material, insert tail of strap through buckle. Pull strapping tight and bend up to hold in place. Insert tail of strapping into tool nose section. Squeeze handle to tension.

2) Once proper tension is reached, maintain tension and raise tool 90° – 120° over buckle and pull down on cutter lever, cutting strap.

3) Remove tool, press cut end down and toward retaining tab.

C1. Wiring Duct

C2. Surface Raceway

C3. Abrasion Protection

C4. Cable Management

4) Using the closure lever on the handle of the tool, bend retaining tab down and over cut end. Provides finished, safe, low profile closure.

## PAN-STEEL® Strapping – MS Series

- Fold over design provides high-retained tension in mechanical fastening and cable bundling applications
- After tensioning, cut end is locked inside low profile buckle – no sharp edges
- Can be used in a wide range of indoor, outdoor, and underground (including direct burial) applications
- Smooth surfaces and rounded edges assures cable protection and worker safety
- Available in AISI 304 stainless steel for general-purpose applications
- Available in AISI 316 stainless steel for the most corrosive environments

Overview

## PAN-STEEL® Nylon 11 Coated Strapping – MSC Series

B1.  
Cable Ties

- Fold over design provides high-retained tension in mechanical fastening and cable bundling applications
- After tensioning, cut end is locked inside low profile buckle – no sharp edges
- AISI 316 stainless steel for the most corrosive environments
- Available in .38 inch (9.5mm), .50 inch (12.7mm), .63 inch (15.9mm) cross sections
- UV resistant, low smoke, halogen-free material
- Temperature tolerance -40°F (-40°C) to 285°F (140°C)

## PAN-STEEL® Custom Length Strapping

- Fold over design provides high retained tension in mechanical fastening and cable bundling applications
- After tensioning, cut end is locked inside low profile buckle – no sharp edges
- For applications that require various bundle diameters
- Supplied in reels of 82.5 feet (25m) (coated) or 100 feet (30.5m) (uncoated)

- Provides job site versatility with minimum inventory
- Packaging speeds removal of steel and includes bundle diameter cut-off guide
- Available in AISI 304 stainless steel for general-purpose applications
- Available in AISI 316 stainless steel for the most corrosive environments

**Nylon 11 coating (optional):**

- Nylon 11 coating provides additional edge protection and prevents corrosion between dissimilar metals
- UV resistant, low smoke, halogen-free material
- Temperature tolerance -40°F (-40°C) to 285°F (140°C)
- AISI 316 stainless steel for the most corrosive environments

System  
Overview

## BT1HT Hand Operated Installation Tool for Strapping

B1.  
Cable Ties

- Strap side entry
- One or two hand tensioning with multi-position rear handle
- Adjustable tension control

- Lever actuated cut-off
- Easy removal of excess strap
- Installs all three sizes: .38 inch (9.5mm), .50 inch (12.7mm), and .63 inch (15.9mm)

B2.  
Cable  
Accessories

B3.  
Stainless  
Steel Ties

| Part Number  | Part Description  | Std. Pkg. Qty. |
|--------------|---|----------------|
| <b>BT1HT</b> | Used for all widths of <i>PANDUIT® PAN-STEEL®</i> Strapping. Tensions, cuts strapping, and secures the buckle tab. Ratchet-type tool provides mechanical advantage for tensioning. Easy to operate. | 1              |

## PCS Cushion Sleeve

C4.  
Cable  
Management

- Black neoprene sleeving used with *PAN-STEEL®* Stainless Steel Ties, custom length banding, and MS strap
- Used on applications requiring improved gripping on non-resilient objects
- Can be used indoors or outdoors (excellent ultraviolet resistance, good resistance to petroleum, and many chemicals)

- Isolation between dissimilar metals allows the ties and straps to be used with aluminum cable tray
- Provides full separation between the ties and the bundle
- Operating temperature range -40°F (-40°C) to 200°F (93°C)

## Rigorous Tests and Physical Properties of Stainless Steel

B1.  
Cable Ties

**STRENGTH:** *PANDUIT® PAN-STEEL®* Stainless Steel Ties and Straps are tested per the SAE Standard AS23190 formerly U.S. Military Specification MIL-S-23190, minimum loop tensile test. This test consists of applying a tie to a split mandrel and then measuring the force required to separate the (two) halves until the tie fails. These minimum loop tensile strengths are given for the various products on pages B3.5 through B3.25.

B2.  
Cable  
Accessories

**TEMPERATURE EXTREMES:** *PANDUIT® PAN-STEEL®* Stainless Steel Ties and Straps are 100% stainless steel in the alloy provided (locking head, locking ball, and body all provided from the same grade of material ordered).

Various temperature tests have been successfully completed. One such test is the U.S. Military Temperature Cycling Test per Thermal Shock Method 107, Test Condition B of MIL-STD-202. This test exposes the parts from low temperature 85°F (-65°C) to high temperature 275°F (135°C) to low temperature -85°F (-65°C). After exposure, the parts must be free of cracks, distortions, breaks, release of locking device; and meet the minimum loop tensile requirements.

B3.  
Stainless  
Steel Ties

**SHOCK AND VIBRATION:** *PANDUIT® PAN-STEEL®* Standard and Heavy Cross Section ties have passed the U.S. Military random vibration Test Method 214. Test Condition II, Letter J of MIL-STD-202. This test consists of applying parts to a bundle and then vibrating them with random vibration for 8 hours in each of two mutually perpendicular directions. The parts are then subjected to further temperature testing and finally have to pass the minimum loop tensile strength test.

*PANDUIT® PAN-STEEL®* Extra Heavy, Super Heavy, MSW50 Strapping and MSW63 Strapping have passed the U.S. Military Shock and Vibration Testing per MIL-STD-167 and MIL-S-901D. The ties were subjected to vibrations in all three planes from 4 – 50 Hz and Shock testing in all three planes utilizing a hammer shock machine.

C1.  
Wiring  
Duct

C2.  
Surface  
Raceway

**SALT SPRAY:** *PANDUIT® PAN-STEEL®* Stainless Steel Ties and Straps have been subjected to salt spray tests without signs of corrosion or reduction in performance.

**OUTDOOR EXPOSURE:** *PANDUIT® PAN-STEEL®* Stainless Steel Ties and Straps have been exposed outdoors at New Lenox, Illinois USA since 1985. At the printing of this catalog, there has been no sign of corrosion or loss of performance.

C3.  
Abrasion  
Protection

C4.  
Cable  
Management

**FLUID IMMERSION:** *PANDUIT® PAN-STEEL®* Stainless Steel Ties were immersed in: 1-Hydraulic Fluid, 2-Turbine Fuel, 3-Lubricating Oil, and 4-Isopropyl Alcohol for four hours at temperatures of 122°F (50°C). Per SAE Standard AS23190, the parts were then subjected to and passed the minimum loop tensile test.

**RADIATION:** Installed cable ties of various materials have been exposed to different amounts of radiation to determine the maximum acceptable limit. These tests were conducted by *PANDUIT* to determine the acceptability for use in various areas of nuclear power plants (accumulated over 40 year life). Radiation resistance is 2x10<sup>8</sup> rads.

## WIRING DUCT

From the smallest wall mounted panels to the largest integrated turnkey systems *PANDUIT® PANDUCT®* Wiring Duct is the premium wire management solution for routing and concealing wiring in electrical control panels. *PANDUCT®* Wiring Duct provide solutions for the original equipment manufacturing, transportation, contract manufacturing, maintenance and repair and communications markets. All *PANDUCT®* Wiring Duct are UL Recognized and CSA Certified and most carry the CE mark.

Some of the features and benefits found in *PANDUCT®* Wiring Duct include:

- Smooth corners and edges that will not abrade wiring or irritate hands
- Integrated nonskid liners and unique cover designs insure the duct cover will not slide once installed or during vibration
- Specially formulated lead-free PVC material meets the NFPA79: 2007 flame retardancy requirements and carries a UL 94V-0 flammability rating
- Scorelines for easy removal of duct fingers and sidewalls
- Accessories and tools that increase productivity and lower the installed cost

*PANDUIT* continues to develop new *PANDUCT®* Wiring Duct solutions to satisfy the challenges facing our customers worldwide. The new type HN hinged cover wiring duct features narrow slots for excellent high-density wire management. Plus the exclusive hinged cover provides convenient channel access resulting in up to 20% faster wiring changes for reduced labor costs. Maximize the utilization of enclosure space with *PANELMAX™* Corner Wiring Duct, which fits into the corner of enclosures and provides up to five square feet of additional subpanel space for mounting control components or up to 20% savings in enclosure footprint area.

**PANDUCT® Nylon Rivets**  
Fast, lowest cost mounting method.  
See page C1.34.

**PANDUCT® Installation Tools**  
Wide selection of hand tools for cutting and installing wiring duct.  
See page C1.34.

**PANDUCT® Type C Cover with Protective Film**  
Reduces scrap and labor costs by protecting the surface during storage, handling, and installation.  
See page C1.5.

**PANDUCT® Divider Wall**  
Creates separate wiring channels within the wiring duct base. Available in solid or slotted wall styles.  
See page C1.26.

\*Actual subpanel space savings will vary depending on wiring duct size, component layout, and enclosure size and type. Footprint savings is based on commercially available enclosures and may not be achievable in some applications.

## UL® CE PANELMAX™ Corner Wiring Duct

- Fits in the unused space in the vertical corner of enclosures, gaining subpanel space or saving enclosure footprint area
- One-piece base requires less time to install than multi-piece solutions
- Optional quick mount clips engage anywhere along the product base further reducing assembly costs

- PANDUIT divider wall snaps directly to the integrated mounting feature in the channel to create two separate channels
- Compatible with PANDUIT 3 inch and 4 inch height wiring duct; both product sizes uses standard 2 inch wiring duct cover
- Base and cover length is 6 feet

### Labor Savings

- By avoiding the time and hassle in removing and replacing covers, simple wiring changes can be made up to **20% faster** compared to conventional wiring duct installations\*

D2. Power Connectors

### Avoid Cover Replacement Costs

- Covers represent 20% of the cost of the wiring duct purchase
- Misplaced covers are a common occurrence after years of use
- Not needing to remove covers during maintenance ensures **better aesthetics and safety** and **avoids the cost to replace lost covers**

\*Based on mock panel installations of type H hinged cover wiring duct and other commonly available wiring ducts adding a single component with four wires.

## **UL** **PANDUCT® Type HN Hinged Cover Narrow Slot Wiring Duct**

- Narrow slot/finger design provides excellent wire management with smaller wire diameters and high-density components such as terminal blocks, input/output devices, and other hardware
- Material: Lead-free PVC
- UL Recognized continuous use temperature: 122°F (50°C)
- UL 94 flammability rating of V-0
- Conforms with NFPA 79-2007 section 13.3.1 requirement for flame retardant material
- Provided with mounting holes
- Base and cover length is 6 feet

## **UL** **PANDUCT® Type H Hinged Cover Wide Slot Wiring Duct**

- Wide slot/finger design provides excellent wire management in general purpose applications and is compatible a wide range of wire sizes and component types
- Material: Lead-free PVC
- Rated for continuous use temperature: 122°F (50°C)
- UL 94 flammability rating of V-0
- Conforms with NFPA 79-2007 section 13.3.1 requirement for flame retardant material
- Provided with standard mounting holes
- Base and cover length is 6 feet

| Base Part Number | Duct Size W x H* |               | Slot Width |     | Cover Part Number | Std. Pkg. Qty | Base Ctn. Qty. | Cover Ctn. Qty. |

Part Number shown for LG (Light Gray). Available in BL (Black) and WH (White).  
Base and cover sold separately.  
\*\*"H" dimension includes duct and cover.

## **UL** **PANDUCT® Type HS Hinged Cover Solid Wall Raceway**

- Solid wall raceway conceals and protects wiring in continuous runs such as in low-voltage cord management applications between control panel stations in conveyor systems
- Material: Lead-free PVC
- UL recognized continuous use temperature: 122°F (50°C)
- UL 94 flammability rating of V-0
- Supplied without mounting holes
- Base and cover length is 6 feet

**PANDUCT® Wire Retainers**  
Contain wiring when duct cover is opened. Wire retainers snap easily between duct fingers.  
See page C1.28.

**PANDUCT® Divider Wall**  
Create separate wiring channels within the wiring duct base. Available in solid or slotted wall styles.  
See page C1.26.

E1. Labeling Systems

**PANDUCT® Type C Cover with Protective Film**  
Reduces scrap and labor costs by protecting the surface during storage, handling, and installation.  
See page C1.9.

**PANDUCT® Nylon Rivets**  
Fast, lowest cost mounting method.  
See page C1.34.

E4. Permanent Identification

**PANDUCT® Installation Tools**  
Wide selection of hand tools for cutting and installing wiring duct.  
See page C1.34.

## PANDUCT® Type G Wide Slot Wiring Duct

- Wide slot/finger design provides greater sidewall rigidity and can be used with a wide range of wire bundle sizes
- Material: Lead-free PVC
- UL recognized continuous use temperature: 122°F (50°C)
- UL 94 flammability rating of V-0
- Conforms with NFPA 79-2007 section 13.3.1 requirement for flame retardant material
- Provided with mounting holes
- Base and cover length is 6 feet

|                         | E          | F            |
|-------------------------|------------|--------------|
| For .5" duct height:    | .37" [9.4] | .80" [20.3]  |
| .75" to 2" duct height: | .31" [7.9] | .80" [20.3]  |
| 3" to 4" duct height:   | .31" [7.9] | 1.00" [25.4] |
| 5" duct height:         | .38" [9.4] | 1.33" [33.8] |

To order cover with protective film add "-F" to part number. 6" cover not available with film.

### PANDUCT® Wire Retainers for Type F Wiring Duct

Contain wiring when duct cover is opened. Wire retainers snap easily between duct fingers. See page C1.28.

### PANDUCT® Divider Wall

Create separate wiring channels within the wiring duct base. Available in solid or slotted wall styles. See page C1.26.

E1. Labeling Systems

### PANDUCT® Type C Cover with Protective Film

Reduces scrap and labor costs by protecting the surface during storage, handling, and installation. See page C1.11.

### PANDUCT® Nylon Rivets

Fast, lowest cost mounting method. See page C1.34.

E3. Pre-Printed & Write-On Markers

E4. Permanent Identification

### PANDUCT® Installation Tools

Wide selection of hand tools for cutting and installing wiring duct. See page C1.34.

## PANDUCT® Type F Narrow Slot Wiring Duct

- Narrow slot/finger design provides more slots to fit the spacing of high-density terminal blocks and other hardware
- Material: Lead-free PVC
- UL recognized continuous use temperature: 122°F (50°C)
- UL 94 flammability rating of V-0
- Conforms with NFPA 79-2007 section 13.3.1 requirement for flame retardant material
- Provided with mounting holes
- Base and cover length is 6 feet

Multiple slot restrictors present with 2" and greater duct wall height.

To order cover with protective film add "-F" to part number. 6" cover not available with film.

## PANDUCT® Flush Cover Type D Round Hole Wiring Duct

- Round hole design has multiple rows of holes to retain and support wire at variable heights and positions
- Material: Lead-free PVC
- UL recognized continuous use temperature: 122°F (50°C)
- UL 94 flammability rating of V-0
- Conforms with NFPA 79-2007 section 13.3.1 requirement for flame retardant material
- Provided with mounting holes
- Base and cover length is 6 feet

For 2" duct height = 3 rows of holes  
 3" duct height = 4 rows of holes  
 4" duct height = 6 rows of holes

To order cover with protective film add "-F" to part number. 6" cover not available with film.

**PANDUCT® Wire Retainers for Type MC Wiring Duct**  
Contain wiring when duct cover is opened. Wire retainers snap easily between duct fingers. See page C1.28.

**PANDUCT® Divider Wall**  
Create separate wiring channels within the wiring duct base. Available in solid or slotted wall styles. See page C1.26.

**PANDUCT® Installation Tools**  
Wide selection of hand tools for cutting and installing wiring duct. See page C1.34.

**PANDUCT® Nylon Rivets**  
Fast, lowest cost mounting method. See page C1.34.

## PANDUCT® Type MC Metric Narrow Slot Wiring Duct

- CE compliant and metric sizing for control panels intended for European applications
- Material: Lead-free PVC
- UL recognized continuous use temperature: 122°F (50°C)
- UL 94 flammability rating of V-0
- Conforms with NFPA 79-2007 section 13.3.1 requirement for flame retardant material
- Provided with DIN 43 659 mounting holes
- Duct and cover packaged together in 2m lengths

Multiple slot restrictors present with 62mm and greater duct wall height.

***PANDUCT*® Wire Retainers for Type FS Solid Wall Raceway**  
Contain wiring when duct cover is opened. Wire retainers mounts onto walls with pressure sensitive adhesive. See page C1.28.

***PANDUCT*® Divider Wall**  
Create separate wiring channels within the wiring duct base. Available in solid or slotted wall styles. See page C1.26.

E1. Labeling Systems

***PANDUCT*® Type C Cover with Protective Film**  
Reduces scrap and labor costs by protecting the surface during storage, handling, and installation. See page C1.17.

***PANDUCT*® Nylon Rivets**  
Fast, lowest cost mounting method. See page C1.34.

E3. Pre-Printed & Write-On Markers

E4. Permanent Identification

***PANDUCT*® Installation Tools**  
Wide selection of hand tools for cutting and installing wiring duct. See page C1.34.

## PANDUCT® Type FS Solid Wall Raceway

- Solid wall design fully encloses cables providing maximum protection and aesthetics
- Material: Lead-free PVC

- UL recognized continuous use temperature: 122°F (50°C)
- UL 94 flammability rating of V-0
- Base and cover length is 6 feet

>Indicates parts available with mounting holes. Remove NM from part number.

Part Number shown for LG (Light Gray). For other color availability see Color Selection Guide, page C1.48.

Base and cover sold separately.

\*"H" dimension includes duct and cover.

To order cover with protective film add "-F" to part number. 6" cover not available with film.

## Wiring Duct for Special Environments

B1.  
Cable Ties

### Type NNC Halogen-Free Metric Wiring Duct

B2.  
Cable  
Accessories

B3.  
Stainless  
Steel Ties

- Halogen-free material is nontoxic, lead-free, environmentally safe and will not release toxic or corrosive gases that could endanger public safety or damage sensitive electronic equipment
- UL 94V-0

Management

D1.  
Terminals

D2.  
Power  
Connectors

### Type TMC Low Smoke/Low Toxicity Wiring Duct

D3.  
Grounding  
Connectors

- Low smoke/low toxicity material emits a low level of toxic fumes and low smoke emissions when burned
- Performs to global mass transit rail standards:
  - U.S. Federal Rail Administration Guidelines and NFPA 130 requirements
  - French AFNOR NFF 16 101, 16 102 (I1, F1 classification at 2.1mm thickness)
  - German DIN 5510-2 (S4, SR2, ST2 classification)
  - UNIFER Italian Railway Flammability standard EN UNI11925-2
- UL 94V-0

F.  
Index

The material is self-extinguishing and has excellent flame retardancy UL 94V-0.

The material does not release dense smoke when burned per ASTM E662 test method.

The material does not emit a high volume of toxic gases when burned per Boeing and Airbus test methods.

\*NORYL is a registered trademark of General Electric Company.

## PANDUCT® Type NNC Halogen-Free Metric Wiring Duct

- Material: Halogen-free modified PPO material as verified with IEC 60754-2 test method (test on gases evolved during combustion of electric cables)
- UL recognized continuous use temperature: 203°F (95°C)
- UL 94 flammability rating of V-0
- Conforms with NFPA 79-2007 section 13.3.1 requirement for flame retardant material
- Provided with DIN 43 659 mounting holes
- Metric sizing and finger progression
- Duct and cover packaged together in 2m lengths

Multiple slot restrictors present with 75mm and greater duct wall height.

Available in LG (Light Gray) and WH (White).

Do not allow cutting, tapping, or cleaning fluids that contain hydrocarbons to come in contact with type NNC wiring duct as it will cause stress cracking. See page C1.47 for a list of chemicals to avoid.

\*"H" dimension includes duct and cover.

## PANDUCT® Type NNC Divider Wall

- NNC solid divider wall can be mounted inside NNC and NE wiring duct to create multiple channels
- Material: Halogen-free modified PPO
- Simply install the divider wall base when mounting the duct and snap the divider wall onto mounting base, DB-C

| Part Number | Length (m) | For Nominal Duct Height (mm) | Std. Pkg. Qty. | Std. Ctn. Qty. (m) |
|-------------|------------|------------------------------|----------------|--------------------|
| NNC50DWH2   | 2          | 50                           | 2              | 40                 |
| NNC75DWH2   | 2          | 75                           | 2              | 40                 |

Available in WH (White) color only.

Note: Must be used with mounting base, DB-C (see page C1.26) which is sold separately. Install mounting bases to the duct channel, locate within 2" of each divider wall end and at least 12" along the length.

Available in BR (Natural Beige) color only.  
\*“H” dimension includes duct and cover.

## PANDUIT® Type TMC Low Smoke/Low Toxicity Solid Divider Wall

- Wiring duct divider wall can be mounted inside any type of PANDUIT PVC wiring duct to create multiple channels
- Simply install the divider wall base when mounting the duct and snap the divider wall onto the mounting base
- All versions snap onto DB-C mounting base
- Divider wall heights 2 inches and greater have a scoreline feature allowing sections to be removed leaving a smooth edge
- Meets UL 508/508A insulation material requirement for barrier between conductors
- UL 94 flammability rating of V-0
- Material: Lead-free PVC

| Part Number | For Nominal Duct Height (mm) | Length (m) | Std. Pkg. Qty. | Std. Ctn. Qty. |

Available in WH (White) only.

Do not allow cutting, tapping, or cleaning fluids that contain hydrocarbons to come in contact with type NE wiring duct as it will cause stress cracking. See page C1.47 for list of chemicals to avoid.

Base and cover sold separately.

\*\*H" dimension includes duct and cover.

\*\*NORYL is a registered trademark of General Electric Company.

## WIRING DUCT TOOLS AND ACCESSORIES

PANDUIT® offers a selection of PANDUCT® Tools and Accessories to aid cutting, modifying, and installing wiring duct.

Some of the features and benefits found in PANDUCT® Tools and Accessories include:

- Wide selection of hand tools for cutting and installing wiring duct
- Snap-in wire retainers to retain cabling when the cover is removed or during cable installation
- Divider walls that mount within the duct enabling multiple channels to be created within a duct channel
- Corner strips hold corners rigid at t-junctions in control panel applications
- Joining strips to connect two sections of duct and hold the walls rigid
- Mounting clips provide an alternative method to mount the duct and allow the duct to be more easily removed

## PANDUIT® Divider Wall

- Wiring duct divider wall can be mounted inside any type of PANDUIT PVC wiring duct to create multiple channels
- Simply install the divider wall base when mounting the duct and snap the divider wall onto the mounting base
- All versions snap onto DB-C mounting base
- Divider wall heights 2 inches and greater have a scoreline feature allowing sections to be removed leaving a smooth edge
- Meets UL 508/508A insulation material requirement for barrier between conductors
- UL 94 flammability rating of V-0
- Material: Lead-free PVC

C2. Surface Raceway

C3. Abrasion Protection

## PANDUCT® Solid Wall Raceway Type FS and Type D Wiring Duct Wire Retainer

C4. Cable Management

- Mounts onto walls of type FS raceway or type D duct with pressure sensitive adhesive
- Full length is used with 2 inch wide duct; for small widths, break off segments at scorelines
- One size fits three different duct widths
- Material: Lead-free PVC

D1. Terminals

D2. Power Connectors

## PANDUCT® Type F, HN, MC and TMC Duct Wire Retainers/Labeling Device

- Used to contain wiring when cover is removed and can also be used as a labeling device
- FWR-C works with all type F and HN duct sizes
- FMWR-C works with all type MC and TMC sizes
- Material: Lead-free PVC

| Part Number | Material  | For Duct Width |             | Std. Pkg. Qty. | Std. Ctn. Qty. |
|-------------|-----------|----------------|-------------|----------------|----------------|
|             |           | In.            | mm          |                |                |
| FWR-C       | Rigid PVC | 1.50 – 4.00    | 37.0 – 76.2 | 100            | 1000           |
| FMWR-C      | Rigid PVC | 1.46 – 3.94    | 37 – 100    | 100            | 1000           |

**Labeling Inside Duct –**  
Snaps onto duct fingers. Full length for use with 4" wide duct. For smaller widths, break off segments at scorelines.

**Labeling Outside Duct –**  
Break off the last segment from wire retainer below (1.5" mark) and snap onto the back of the remaining segment. Install label and mount between fingers facing outward.

## PANDUCT® Duct Corner Strips with 1 Inch Bend Radius Control

- Create a strong rigid corner at wiring duct junctions
- Provide bend radius protection for cabling as required in NFPA 79-2007 section 13.1.5.9 and TIA/EIA-568-B and 569-A
- Available in five pre-cut sizes and 6-foot lengths that can be cut-to-size to meet any size requirement
- Easy to install two-piece design
- Compatible with all styles of PANDUIT wiring duct
- UL 94 flammability rating of V-0
- Material: Lead-free PVC

| Part Number | Part Description | For Duct Height |    | Color | Std. Pkg. Qty. | Std. Ctn. Qty. |
|-------------|------------------|-----------------|----|-------|----------------|----------------|
|             |                  | In.             | mm |       |                |                |

### 6' Lengths for use with all Types of PVC Wiring Duct

| Part Number   | Part Description                             | For Duct Height |             | Color      | Std. Pkg. Qty. | Std. Ctn. Qty. |
|---|--|-----------------|-------------|------------|----------------|----------------|
|   |  | In.             | mm          |            |                |                |
| <b>6' Lengths for use with all Types of PVC Wiring Duct</b> |  |                 |             |            |                |                |
| <b>DJS1LG6</b>  | 6' length is cut by user to fit duct height. | Cut-to-size     | Cut-to-size | Light Gray | 6              | 120            |
| <b>DJS1WH6</b>  |  |                 |             | White      |                |                |

To cut product to proper length subtract 1/2" from the duct wall height (example: for G2X2LG6, cut DJS1\*\*6 to 1 1/2" length).

## PANDUCT® Snap-Clip Mounting Brackets

- Duct easily snaps into bracket
- No mounting holes required in duct
- Ensures no metal is inside the duct
- Snap-clip spacing is not critical
- Simplifies fabrication drawings and panel layout
- Material: Spring steel

A. System Overview

## PANDUCT® Installation Tools

B1. Cable Ties

- PBDCT and DCT easily cut *PANDUCT*® Wiring Duct and Cover
- DNT-100 notches duct sidewalls to bottom scoreline for tees and corner junctions
- TNR installs or removes *PANDUIT* Nylon Rivets, NR1-C and NR1-M, quickly and easily
- DFCT easily removes duct fingers in tight places

B2. Cable Accessories

PBDCT

| Part Number              | Part Description  | Std. Pkg. Qty |
|--------------------------|---|---------------|
| <b>Duct Cutting Tool</b> |   |               |
| PBDCT                    | <i>PANDUIT</i> bench-mount duct cutting tool. Cuts slotted wiring ducts and wiring duct covers with up to 6" width and up to 5" height. Full 78.74" (2m) measuring scale. Includes safety guarding. | 1             |
| DCT                      | Hand-held duct cutting tool.  | 1             |

## PANDUCT® Type F Wiring Duct and FS Raceway Dimensions

Dimensions are shown for reference only. Contact PANDUIT customer service at 800-777-3300 for specific dimensional needs.

Note: 'A' dimension is measured at base.  
Note: 'K' dimension shown in mounting hole dimensions below.

**Mounting Hole Dimensions**  
For .5", .75", 1" and 1.5" wide duct.

For 2.0", 2.5", 3", 4" and 6" wide duct.

Note: For type FS raceway, no mounting holes is the standard condition; if mounting holes are required, delete NM from the part number.

F. Index

For 25mm, 37.5mm, and 50mm high duct.

For 62.5mm, 75mm, and 100mm high duct.

Note: 'A' dimension is measured at base.  
Note: 'K' dimension shown in mounting hole dimensions below.

**Mounting Hole Dimensions**  
For 25mm, 37.5mm, and 50mm width duct.

For 75mm and 100mm width duct.

| Duct Size (W x H)              | Dimensions – mm (Inches) |                |                |                |              |               |                |              |

## PANDUCT® Type NNC Wiring Duct Dimensions

Dimensions are shown for reference only. Contact PANDUIT customer service at 800-777-3300 for specific dimensional needs.

For 25mm, 37.5mm, and 50mm high duct.

For 75mm and 100mm high duct.

### Mounting Hole Dimensions

For 25mm, 37.5mm, and 50mm width duct.

For 75mm and 100mm width duct.

| Duct Size<br>(W x H)           | Dimensions – mm (Inches) |                |                |                |                |              |

For 2", 3", and 4" wide duct.

A. System Overview

## PANDUCT® Type FL Wiring Duct Dimensions

Dimensions are shown for reference only.  
Dimensions are in mm (in.). Contact PANDUIT customer service at 800-777-3300 for specific dimensional needs.

B1. Cable Ties

B2. Cable Accessories

B3. Stainless Steel Ties

C1. Wiring Duct

C2. Surface Raceway

C3. Abrasion Protection

C4. Cable Management

D1. Terminals

D2. Power Connectors

D3. Grounding Connectors

E1. Labeling Systems

E2. Labels

E3. Pre-Printed & Write-On Markers

E4. Permanent Identification

E5. Lockout/Tagout & Safety Solutions

F. Index

For FL25X25LG-A and FL50X50LG-A

Note: 'B' dimension is without adhesive.

| Nominal Duct Size<br>(W x H)<br>mm | Dimensions – mm<br>(In.) |               |
|------------------------------------|--------------------------|---------------|
|                                    | A                        | B             |
| 12 x 12<br>(.49) x (.49)           | 12.4<br>(.49)            | 12.4<br>(.49) |
| 25 x 25<br>(.98) x (.98)           | 24.9<br>(.98)            | 24.9<br>(.98) |
| 50 x 50<br>(1.97) x (1.97)         | 50<br>(1.97)             | 50<br>(1.97)  |

Note: Type FL wiring duct has factory applied adhesive. For 50 x 50 two strips of tape are used; otherwise, only one strip is centered on the part.

## PANDUCT® PANELMAX™ Corner Wiring Duct – Wirefill Capacity

Overview

## Wirefill Formula

B1.  
Cable Ties

### General Formula

PANDUIT Wiring Duct wirefills are calculated using the following general formula:

$$50\% \text{ Wirefill} = 50\% \text{ of } \left( \frac{\text{Usable Duct Area}}{\text{Wire Area}} \right)$$

B2.  
Cable  
Accessories

B3.  
Stainless  
Steel Ties

### Why use a 50% Wirefill?

As specified in NFPA79-2007 section 13.5.2, *Percentage Fills of Raceways (Ducts)*, a 50% wirefill is given as the maximum wirefill capacity in all PANDUIT Wiring Ducts. This helps ensure general safe wiring practices are followed. In actual practice, a 50% wirefill is the maximum amount of wiring the duct can hold given the additional airspace created between cables by non-uniform cable shapes, cable interlacing, and cable packing factors.

Surface  
Raceway

### What is the Usable Duct Area?

The usable area we define as the calculation of internal area that can be occupied by wires or cables.

#### Calculation of Internal Area

Since we use the outer channel dimensions in our calculation we make an adjustment in our formula for the thickness of material and for design elements that extend inside the channel.

#### Air Space Allotment

In our wirefill formula an adjustment is made to the channel internal area to account for "unused" air space that will be present between cables when placed in the channel. Our formula assumes a uniform close packed or high-density cable arrangement (see diagram) (Note 1).

D1.  
Terminals

D2.  
Power  
Connectors

Considering these factors the usable duct area is equal to an average of 90% of the nominal area, or  $(W \times H) \times .90$ .

D3.  
Grounding  
Connectors

### Wire Area

The wire area formula is converted to allow calculation using the cable diameter:

$$\begin{aligned} A_{\text{WIRE}} &= \pi r^2 \\ A_{\text{WIRE}} &= (\pi/4) \times D^2 \\ A_{\text{WIRE}} &= .785 \times D^2 \end{aligned}$$

E1.  
Labeling  
Systems

E2.  
Labels

### Formula Derivation

Inserting the elements from above into the general formula results in the following:

$$50\% \text{ Wirefill} = .50 \left( \frac{(W \times H) \times .90}{.785 \times D^2} \right)$$

Simplifying this formula results in the formula used for wirefill calculation (Note 2):

$$50\% \text{ Wirefill} = \left( \frac{W \times H}{1.75 \times D^2} \right)$$

E3.  
Pre-Printed  
& Write-On  
Markers

E4.  
Permanent  
Identification

Note: When calculating wirefill capacity using the above formula, variables W, H and D must be expressed in same units (i.e. mm or inches).

<sup>1</sup> This calculation does not account for additional airspace created between cables by non-uniform cable shapes, cable interlacing, and cable packing factors.  
<sup>2</sup> The resulting formula is used for all PANDUIT flush cover ducts, this excludes type NE duct which has a different profile design that results in a divisor of  $2.0 \times D^2$  (rather than  $1.75 \times D^2$  as shown here) and type H and HS wiring duct with a profile design that results in a divisor of  $1.85 \times D^2$  and corner wiring duct which uses calculated internal area and a divisor of  $2.0 \times D^2$ .

## PANDUCT® Wiring Duct and Raceway – Material Specifications

| Properties                           | Units                            | Test Method | Lead-Free PVC | Halogen-Free Modified PPO (NNC) | NORYL* (NE) | Polypropylene (FL) | Low Smoke/ Low Toxicity (TMC) |
|--------------------------------------|----------------------------------|-------------|---------------|---------------------------------|-------------|--------------------|-------------------------------|

### Rigid Polyvinyl Chloride (PVC)

A general purpose material for use in indoor applications. PVC has a UL flammability rating of V-0 and is UL 94 Recognized for continuous use temperatures up to 122°F (50°C). PVC is an economical wiring duct material.

### Halogen-Free (Modified PPO)

A special purpose material for use in halogen-free or high temperature applications. Modified PPO has a UL 94 flammability rating of V-0 and is UL Recognized for continuous use temperatures up to 203°F (95°C), and is 20% lighter than PVC.

### NORYL\* Halogen-Free

A special purpose material for use in halogen-free or high temperature applications. NORYL\* has a UL 94 flammability rating of V-1 and is UL Recognized for continuous use temperatures up to 203°F (95°C), and is 20% lighter than PVC.

### Polypropylene

A flexible material with a UL 94 flammability rating of V-2 and that is UL Recognized for continuous use temperatures up to 149°F (65°C).

### Low Smoke/ Low Toxicity

A special purpose material for use where low smoke, low toxicity and low flammability characteristics are critical. Ideally suited for transportation industry regulations. Low smoke/ low toxicity has a UL 94 flammability rating of V-0 and is UL Recognized for continuous use temperatures up to 176°F (80°C).

\*NORYL is a registered trademark of General Electric Company.

## Installation Tips:

### Application of Latex Paint on PANDUCT® Wiring Duct

The following is recommended to properly prepare the surface of the wiring duct/raceway and covers for the best adhesion of latex paint:

1. Clean surface with mild soap and water solution or mineral spirits with a clean lint free towel. Allow to dry.
2. Using a sanding pad (such as synthetic stripping pad or medium/fine steel wool), slightly roughen the surface to be painted.
3. Apply a coat of all-purpose 100% acrylic primer and allow to dry.
4. Apply the desired topcoat of latex paint and allow to dry.
5. Install the wiring duct/raceway and covers.

### Cutting Wiring Duct and Cover

For small quantities, use the DCT duct cutting tool on page C1.34. For larger quantities use a miter cutting saw blade for clean burr-free cuts. Recommended blade: *Carbide 80T or 100T; .90" thickness, .125 kerf.*

### Recommended Precaution when Using Type NNC and NE Wiring Duct

Cleaning solvents and cutting fluids that contain any of the following chemical agents should not come in contact with type NNC or type NE wiring duct. These chemicals are known to cause stress cracking in the halogen-free PPO material.

- Hydrocarbons
- Phenols
- Ketones
- Amines
- Ethers
- Organic, inorganic and oxidizing acids
- Petrol

## NOTES

## FIBER-DUCT™ ROUTING SYSTEM

PANDUIT provides leading solutions for cable routing. These routing products are compatible with our cable management solutions increasing your ability to maintain an orderly and clean work environment, implement quick and easy moves, adds, and changes and maintain the integrity of your fiber and copper cabling plant in order to maximize long-term performance.

- Two system sizes available: 2x2 and 4x4
- Minimum 2 inch (50.8mm) bend radius fittings protect against signal loss due to excessive cable bends
- Snap-on non-slip covers
- Compatible with PANDUIT® FIBERRUNNER® 12x4, 6x4, 4x4 and 2x2 Routing Systems

The 2x2 and 4x4 FIBER-DUCT™ Routing Systems are comprised of channel, fittings, and brackets designed to segregate, route, and protect fiber optic and copper cabling to and between racks within the telecommunications room.

| <b>FT2X2YL</b>                                | Attaches to channel to create a 90° horizontal branch from a straight horizontal run. Cover included.  | 2x2         | 1              | 5              |
| <b>FT4X4YL</b>                                |  | 4x4         | 1              | 5              |
| <b>4-Way Cross Fitting</b>                    |  |             |                |                |
| <b>FFWC2X2YL</b>                              | Attaches to channel to create a horizontal four way cross intersection. Cover included.  | 2x2         | 1              | 5              |
| <b>FFWC4X4YL</b>                              |  | 4x4         | 1              | 5              |
| <b>End Cap Fitting</b>                        |  |             |                |                |
| <b>FEC2X2YL</b>                               | Used for closing off open ends of the channel. No coupler required. Push-on installation.  | 2x2         | 1              | 5              |
| <b>FEC4X4YL</b>                               |  | 4x4         | 1              | 5              |
| <b>Inside Vertical 45° Angle Fitting</b>      |  |             |                |                |
| <b>FIV452X2YL</b>                             | Attaches to channel to create a 45° upward angle from a straight horizontal run. Used with outside vertical 45° angle fitting FOV452X2YL or FOV454X4YL to change level of straight horizontal runs. Cover included.  | 2x2         | 1              | 5              |
| <b>FIV454X4YL</b>                             |  | 4x4         | 1              | 5              |
| <b>Outside Vertical 45° Angle Fitting</b>     |  |             |                |                |
| <b>FOV452X2YL</b>                             | Attaches to channel to create a 45° downward angle from a straight horizontal run. Used with inside vertical 45° angle fitting FIV452X2YL or FIV454X4YL to change level of straight horizontal runs. Cover included. | 2x2         | 1              | 5              |
| <b>FOV454X4YL</b>                             |  | 4x4         | 1              | 5              |
| <b>Inside Vertical Right Angle Fitting</b>    |  |             |                |                |
| <b>FIVRA2X2YL</b>                             | Attaches to channel to create a 90° upward angle from a straight horizontal run. Used with outside vertical 90° angle fitting FOVRA2X2YL or FOVRA4X4YL to change level of straight horizontal runs. Cover included.  | 2x2         | 1              | 5              |
| <b>FIVRA4X4YL</b>                             |  | 4x4         | 1              | 5              |
| <b>Outside Vertical Right Angle Fitting</b>   |  |             |                |                |
| <b>FOVRA2X2YL</b>                             | Attaches to channel to create a 90° downward angle from a straight horizontal run. Used with inside vertical 90° angle fitting FIVRA2X2YL or FIVRA4X4YL to change level of straight horizontal runs. Cover included. | 2x2         | 1              | 5              |
| <b>FOVRA4X4YL</b>                             |  | 4x4         | 1              | 5              |
| <b>4x4 to 2x2 FIBER-DUCT™ Reducer Fitting</b> |  |             |                |                |
| <b>FRF42YL</b>                                | Joins any 4x4 FIBER-DUCT™ Fitting to the 2x2 FIBER-DUCT™ Channel, S2X2YL6 or E2X2YL6. Includes cover.  | 2x2<br>4x4  | 1              | 5              |

For other colors replace suffix YL (Yellow) with OR (Orange) or BL (Black).  
Fittings include 5/16" assembly holes for fast mechanical fastening.

| Part Number   | Part Description  | System Size | Std. Pkg. Qty. | Std. Ctn. Qty. |
|---|---|-------------|----------------|----------------|
| <b>2x2 Vertical Tee</b>   |   |             |                |                |
| <b>FVTHD2X2YL</b>   | Attaches to 2x2 channel to create a 90° vertical drop from a horizontal run. Hinged door included. Accepts channel cover in conjunction with channel. Use <i>QUIKLOCK™</i> Coupler FBC2X2YL with HS2X2YL6 or H2X2YL6 channels. Use snap rivets NR2WH-L or bolts F14PN-L with S2X2YL6 or E2X2YL6 channels. Also accepts FIDT2X2YL. | 2x2         | 1              | 5              |
| <b>3-Sided BRC Trumpet Spillout for 2x2 Exit</b>                        |   |             |                |                |
| <b>FTR2X2YL</b>   | Used to limit the bend radius of the cable to 2" (50.8mm) when exiting from a <i>FIBERRUNNER®</i> Spill-Over FRSPYL or from 2x2 <i>FIBER-DUCT™</i> Channel.   | 2x2         | 1              | 5              |
| <b>1-Port Spillout to 1.5" (38mm) Inside Diameter Corrugated Tubing</b> |   |             |                |                |
| <b>FIDT2X2YL</b>  | Used to route cable into one piece of 1.5" (38mm) diameter split corrugated tubing. Used with <i>FIBERRUNNER®</i> Spill-Over FRSPYL, 2x2 <i>FIBER-DUCT™</i> Fittings, and the 2x2 <i>FIBERRUNNER®</i> Hinged Channel. Securely holds split corrugated tubing to ensure system integrity and easy access to add or remove cables.  | 2x2         | 1              | 5              |
| <b>4x4 Vertical Tee</b>   |   |             |                |                |
| <b>FVT4X4YL</b>   | Attaches to channel to create a 90° vertical drop from a horizontal run. Accepts FIDT4X4BL, FTR4X4YL, S4X4YL6 or E4X4YL6 directly.  | 4x4         | 1              | 5              |
| <b>3-Sided Vertical Tee Trumpet Spillout</b>                            |   |             |                |                |
| <b>FTR4X4YL</b>   | Used to limit the bend radius of the cable to 2" (50.8mm) when exiting from a 4x4 or 6x4 <i>FIBERRUNNER®</i> Vertical Tee and 4x4 <i>FIBER-DUCT™</i> Fittings.  | 4x4         | 1              | 5              |
| <b>2-Port Spillout to 1.5" (38mm) Inside Diameter Corrugated Tubing</b> |   |             |                |                |
| <b>FIDT4X4BL</b>  | Used to route cable into one or two pieces of 1.5" (38mm) diameter split corrugated tubing. Used with FRVT6X4YL, FRVT4X4YL, or FVT4X4YL. Securely holds corrugated split tubing to ensure system integrity and easy access to add or remove cables. Black color only.   | 4x4         | 1              | 5              |

For other colors replace suffix YL (Yellow) with OR (Orange) or BL (Black).

## FIBER-DUCT™ Bend Radius Control Trumpets

- Provide method to transition cabling into rack system
- Maintain 1 inch (25.4mm) bend radius control

| Part Number  | Part Description   | For Threaded Rod Size | Std. Pkg. Qty. | Std. Ctn. Qty. |
|--|--|-----------------------|----------------|----------------|
| <b>EIA/TIA Threaded Rod Mounting Bracket</b>   |  |                       |                |                |
| <b>FEIAB58</b>   | Bracket consists of two identical components that clamp onto the crossmembers of standard EIA/TIA racks and are secured with standard hex nuts and split lockwashers (included) tightened onto a length of 5/8" diameter threaded rod (not included). The threaded rod is positioned in the center of the brackets providing a vertical threaded rod stud to mount <i>FIBERRUNNER</i> ® and <i>FIBER-DUCT</i> ™ Threaded Rod Mounting Brackets onto. | 5/8"                  | 1              | 10             |
| <b>Two-Piece Ladder Rack Bracket for Attaching Threaded Rod to 1 1/2" – 2" Ladder Rack</b>                   |  |                       |                |                |
| <b>F2PCLB12</b>  | Two-piece bracket attaches to 3/8" (9.5mm) wide x 1 1/2" (38.1mm) or 3/8" (9.5mm) wide x 2" (50.8mm) ladder rack rail. Bracket halves slide into position and clamp together on the ladder rack rail, which allows for a one-handed assembly of the threaded rod (not included). Contains bracket and hardware for attaching bracket to ladder rack.   | 1/2"                  | 1              | 10             |
| <b>F2PCLB58</b>  |  | 5/8"                  | 1              | 10             |
| <b>Two-Piece Framing Clip for Attaching 5/8" Threaded Rod to 2" x 9/16" C-Channel Auxiliary Framing Bars</b> |  |                       |                |                |
| <b>FRAFC58</b>   | Two-piece framing clip attaches to auxiliary framing bars. Framing clip halves slide into position and interlock on the auxiliary framing bars, allowing easier assembly of the threaded rod to bars. Contains two-piece framing clip and hardware for attaching framing clip to auxiliary framing bars. (5/8" threaded rod not included.)   | 5/8"                  | 1              | 10             |

## PAN-WAY® METAL RACEWAY

PAN-WAY® Metal Raceway is a series of single and multi-channel solutions for routing, protecting, concealing and terminating power wire and high performance copper, voice, video or fiber optic cable. PANDUIT metal raceway is designed with labor saving features to increase productivity and lower installed costs, while incorporating benefits of increased safety and cable protection. PAN-WAY® Metal Raceway is an innovative routing solution that offers superior benefits over competitive systems:

PAN-WAY® Metal Raceway systems include a complete assortment of fittings, junction boxes, faceplates and accessories. They are available in white and almond color to match any decor and most popular electrical outlets. Systems are optimized for use with PANDUIT® MINI-COM® Modules for complete connectivity possibilities.

### PMR5 and PMR7 Single Channel Metal Raceway

- Raceway system features a patent pending bonding design that provides full continuity of the ground path between fittings and channel, for increased electrical safety
- System components incorporate an innovative snap-mount assembly method for fast installations, resulting in measurable contractor labor savings
- Fittings and mounts can be attached using various types and sizes of fasteners, eliminating the requirements of using only flat head style screws
- One-piece channel construction eliminates the problem of channel separation, associated with competitive two-piece designs, saving installation time

### PMR40 Multi-Channel Metal Raceway

- Raceway accepts standard double gang faceplates for increased termination options and reduced number of components
- System includes optional faceplates and fittings to support high performance Category 6A copper and fiber optic cabling terminations
- Full capacity 2 inch bend radius fittings provide necessary cable protection without restricting channel capacity

| PMR40CWH13.75                             | 13.75" pre-cut cover. To be used with PMR40 raceway for mounting devices on 18" centers.   | —                                | White  | —            | 1              |
| PMR40CWH19.75                             | 19.75" pre-cut cover. To be used with PMR40 raceway for mounting devices on 24" centers.   | —                                | White  | —            | 1              |
| PMR40CWH31.75                             | 31.75" pre-cut cover. To be used with PMR40 raceway for mounting devices on 36" centers.   | —                                | White  | —            | 1              |
| <b>PMR40 Metal Raceway Divider Wall</b>   |  |                                  |        |              |                |
| PMR40DW5                                  | PMR40 divider wall snaps into PMR40DC-X to create separate channels. Must use wire retainers to ensure channel separation per UL/CSA. Available in 5' lengths. | —                                | Gray   | 5            | 5              |
| <b>Divider Wall Clip</b>                  |  |                                  |        |              |                |
| PMR40DC-X                                 | Divider wall clip. Required for supporting PMR40DW. 30" spacing recommended between clips.   | —                                | Gray   | —            | 10             |

‡For other colors replace WH (White) with AL (Almond). Order number of feet required in multiples of standard carton quantity. Order raceway base and cover separately.

## cUL<sup>us</sup> PAN-WAY® PMR40 Metal Raceway Fittings

- PMR40 fittings are designed to exceed the TIA/EIA-568-B and 569-B required minimum bend radius for high performance copper and fiber optic cabling systems

|-------------|--|--------|----------------|----------------|
| PMR40ICWH   | Inside corner fitting. Used to join sections of PMR40 raceway at inside corners.   | White  | 1              | 10             |
| PMR40I45EWH | Internal 45° elbow fitting. Used to join sections of PMR40 raceway at 45° inside corners.  | White  | 1              | 10             |
| PMR40SOCWH  | Outside corner fitting without bend radius control. Used to join sections of PMR40 raceway at outside corners.   | White  | 1              | 10             |
| PMR40OCWH   | Outside corner fitting. Used to join sections of PMR40 raceway at outside corners.   | White  | 1              | 10             |
| PMR40E45EWH | External 45° elbow fitting. Used to join sections of PMR40 raceway at 45° outside corners.   | White  | 1              | 10             |
| PMR40TWH    | Tee fitting. Used to join sections of PMR40 raceway at tee intersections.  | White  | 1              | 10             |
| PMR40TD50   | Tee divider insert for a 50/50 data/power split. Maintains a 50/50 channel separation for power and data applications.   | Gray   | 1              | 10             |
| PMR40ECWH   | End cap fitting. Used to terminate or allow entry into PMR40 raceway. Breakouts for 1/2" conduit.  | White  | 1              | 10             |
| PMR40EEWH   | Entrance end fitting. Breakouts for 3/4", 1", and 1 1/4" conduit which allows entry from ceiling or wall.  | White  | 1              | 10             |
| PMR40TRWH   | WIREMOLD* to PMR40 transition fitting. In-line transition fitting from Wiremold* 4000 series to PMR40 raceway.   | White  | 1              | 10             |
| PMR40BFWH   | Backfeed fitting. Allows cable entry through the back of the PMR40 raceway. Two round breakouts for 1/2", 3/4", and 1" conduit, two round breakouts for 3/4", 1", and 1 1/4" conduit and two 1 11/16" x 2 9/16" rectangular breakouts. | White  | 1              | 10             |
| PMR40PCWH   | Panel connector. To connect PMR40 raceway with surface type panel boxes.   | White  | 1              | 10             |
| PMR40ICC    | Internal corner coupling.  | White  | 1              | 10             |
| PMR40WR-X   | Wire retainer. Used to hold wires in place during installation.  | Gray   | 10             | 100            |
| PMR40DB50   | Device mounting bracket 50/50 split. Used to mount NEMA standard single gang electrical outlets and communication devices with either screw-on or snap-on single gang faceplates.  | Gray   | 1              | 10             |
| PMR40DP50WH | PMR40 data plate for mounting data faceplates PMR40FH2, PMR40FH4, PMR40KH2 or PMR40KH4 when a 50/50 split channel is used in the PMR40 base. Includes data plate, 2.50" pre-cut cover, and offset divider wall.                        | White  | 1              | 10             |
| PMR40FH2WH  | Snap-on horizontal sloped communication faceplate. Accepts two PANDUIT® MINI-COM® Modules (not included). No additional mounting hardware required.  | White  | 1              | 10             |
| PMR40FH4WH  | Snap-on horizontal sloped communication faceplate. Accepts four PANDUIT® MINI-COM® Modules (not included). No additional mounting hardware required.   | White  | 1              | 10             |
| PMR40KH2WH  | Snap-on horizontal sloped communication faceplate. Accepts two Keystone modules (not included). No additional mounting hardware required.  | White  | 1              | 10             |
| PMR40KH4WH  | Snap-on horizontal sloped communication faceplate. Accepts four Keystone modules (not included). No additional mounting hardware required.   | White  | 1              | 10             |

†For other colors replace WH (White) with AL (Almond).

## Cable Fill Capacities for PMR40 Metal Raceway

This information is to be used as a guide in selecting the proper size raceway. The maximum amounts may vary according to the cable installation methods, straightness of cables, etc.

**A = 7.45 in.<sup>2</sup>**

**Cable fill #1:** Open channel without devices

**A = 6.18 in.<sup>2</sup>**

**Cable fill #2:** Undivided, wire retainer only

**A = 2.64 in.<sup>2</sup>**

**B = 3.04 in.<sup>2</sup>**

**Cable fill #3:** Divided with wire retainer

**A = 4.64 in.<sup>2</sup>**

**Cable fill #4:** Undivided with duplex receptacle on two sides

**A = 1.87 in.<sup>2</sup>**

**B = 2.84 in.<sup>2</sup>**

**Cable fill #5:** Divided with duplex receptacle on (A) side

**A = 2.49 in.<sup>2</sup>**

**B = 2.21 in.<sup>2</sup>**

**Cable fill #6:** Divided with duplex receptacle on (B) side

**SPEC = 40% cable fill** – Recommended by TIA/EIA-569-B for design.

**MAX for 60% cable fill** – Recommended by TIA/EIA-569-B for unplanned additions.

**MAX for 40% power cable fill** – Based on available internal area.

| Raceway Type and Configuration                         | Fill Area (in. <sup>2</sup> ) | Electrical Cables |         |         | Data Grade Cables |         | Data Grade Cables |         | Audio/Video  |         |

## c-UL<sup>us</sup> PAN-WAY® PMR5/PMR7 Metal Raceway System

- c-UL-us listed and rated to 600 V; meets UL 5 and CSA22.2 No. 62-93 safety standards
- Raceway system features a patent pending bonding design that provides full continuity of the ground path between fittings and channel, for increased electrical safety
- System components incorporate a unique snap mount assembly method for faster installation

- Fittings and mounts can be attached using various types and sizes of fasteners, eliminating the requirements of using only flat head style screws
- One-piece channel construction eliminates the problem of channel separation, associated with competitive two-piece designs, saving installation time

| <b>PMR57LTEWH</b>   | Left twisted elbow for 90° twist with 90° turn. For double turn at right angles from one surface to another, such as a flat run on a sidewall to a flat run on a ceiling. For use with PMR5 and PMR7 raceway.               | White  | 1              | 10             |
| <b>PMR57RTEWH</b>   | Right twisted elbow for 90° twist with 90° turn. For double turn at right angles from one surface to another, such as a flat run on a sidewall to a flat run on a ceiling. For use with PMR5 and PMR7 raceway.              | White  | 1              | 10             |
| <b>PMR57TWH</b>     | Tee fitting for use with PMR5 or PMR7 raceway.  | White  | 1              | 10             |
| <b>PMR57EEWH</b>    | Entrance end fitting. 1/2" conduit breakouts allows entry of PMR5 or PMR7 raceway from a box, the ceiling, or a wall. Spring steel bushing included for use when connecting to a box.                                       | White  | 1              | 10             |
| <b>PMR57AOCWH</b>   | Adjustable offset allows PMR5 or PMR7 to be mounted flush to wall when connected to surface type panel boxes. Adjustable between 5/8" and 1 3/8" from surface to center of conduit. 1/2" chase nipple and locknut included. | White  | 1              | 10             |
| <b>PMR57CBWH</b>    | Corner box for connecting PMR5 or PMR7 raceway. Each leg has 1/2" conduit breakouts and room for splicing.  | White  | 1              | 10             |
| <b>PMR57TRWH</b>    | WIREMOLD* to PMR5 transition fitting. In-line transition fitting from Wiremold* 500 series to PMR5 raceway.   | White  | 1              | 10             |
| <b>PMR77TRWH</b>    | WIREMOLD* to PMR7 Transition fitting. In-line transition fitting from WIREMOLD* 700 series to PMR7 raceway.   | White  | 1              | 10             |
| <b>PMR57EBCWH</b>   | Elbow box connector used to connect PMR5 or PMR7 raceway to boxes at a right angle. Breakouts for 1/2" conduit.   | White  | 1              | 10             |
| <b>PMR57ECCWH</b>   | Elbow conduit connector used to connect PMR5 or PMR7 raceway to conduit at a right angle. Breakouts for 1/2" conduit.   | White  | 1              | 10             |
| <b>PMR57JBC50-X</b> | Junction box connector used to connect PMR5 or PMR7 raceway to boxes with 1/2" conduit breakout.  | White  | 10             | 100            |
| <b>PMR57JBC75-X</b> | Junction box connector used to connect PMR5 or PMR7 raceway to boxes with 3/4" conduit breakout.  | White  | 10             | 100            |
| <b>PMR57CC50-X</b>  | Conduit connector used to connect PMR5 or PMR7 raceway to 1/2" conduit.   | White  | 10             | 100            |
| <b>PMR57CC75-X</b>  | Conduit connector used to connect PMR5 or PMR7 raceway to 3/4" conduit.   | White  | 10             | 100            |

A. System Overview

## Cable Fill Capacities for PMR5/PMR7 Metal Raceway

B1. Cable Ties

This information is to be used as a guide in selecting the proper size raceway. The maximum amounts may vary according to the cable installation methods, straightness of cables, etc.

B2. Cable Accessories

PMR5

A = .22 in.<sup>2</sup>

PMR7

A = .30 in.<sup>2</sup>

B3. Stainless Steel Ties

C1. Wiring Duct

C2. Surface Raceway

C3. Abrasion Protection

**SPEC = 40% cable fill** – The recommended design in cable capacity, leaves room for future moves, adds, and changes.

**MAX for Data = 60% cable fill** – The maximum cable quantity based on cable interweaving and packing factors.

C4. Cable Management

D1. Terminals

D2. Power Connectors

D3. Grounding Connectors

## PAN-WAY® Non-Metallic Surface Raceway

PAN-WAY® Non-Metallic Surface Raceways provide maximum flexibility for routing, protecting, concealing and terminating high performance copper, voice, video, fiber optic and power cabling. PANDUIT surface raceways are designed with attention to function and aesthetics to blend with any décor. PANDUIT surface raceway systems include transition fittings that facilitate seamless integration of one PANDUIT surface raceway system to another. PANDUIT Surface Raceway Systems work with all PANDUIT® MINI-COM® Modules for complete connectivity possibilities.

- Aesthetically pleasing
- Lightweight
- Tamper resistant
- Bend radius control
- Resists dents and conceals scratches and chips
- Ease of modifications and additions
- Lowest installed cost

PANDUIT surface raceway provides a variety of choices when selecting data and electrical terminations. All PANDUIT surface raceways include a full complement of fittings that are designed to maintain the proper bend radius control required for high performance copper and fiber optic cabling systems. All of the raceways accept either NEMA 70mm standard screw-on faceplates or superior PAN-WAY® Snap-On Faceplates. PANDUIT surface raceway systems work with all PANDUIT® MINI-COM® Modules, for complete connectivity possibilities.

## PAN-WAY® TG-70 Non-Metallic Surface Raceway

PAN-WAY® TG-70 Non-Metallic Surface Raceway is a multi-channel raceway, which provides a solution for routing copper, fiber optic, and/or power cabling when maximum cable capacity is required.

- Large raceway channel provides maximum capacity
- Fittings maintain 40mm (1.6 inch) bend radius control
- Multi-channel two-piece design
- Aesthetically pleasing
- Lightweight
- Tamper resistant

The TG-70 raceway system consists of raceway base and cover, fittings, termination hardware and accessories. PAN-WAY® TG-70 Raceway can mount NEMA standard screw-on faceplates or superior PAN-WAY® Snap-On Faceplates directly to the channel. Fittings for TG-70 are available to transition to PAN-WAY® T-45 and LD raceway.

- Large cable capacity with aesthetically pleasing design
- Tamper resistant

- Compatible with NEMA standard faceplates or *PAN-WAY®* Classic Series Snap-On Faceplates
- Transitions to *PANDUIT* T-45 and LD profile raceway
- Supplied with pre-punched mounting holes

**UL** **SA LISTED** **SP** **PAN-WAY® TG-70 Raceway Fittings**

• TG-70 fittings are designed to exceed the TIA/EIA-568-B and 569-B required minimum bend radius for high performance copper and fiber optic cabling systems

| Part Number    | Part Description   | Color‡    | Std. Pkg. Qty. | Std. Ctn. Qty. |
|----------------|--|-----------|----------------|----------------|
| <b>T70CC</b>   | Cover coupler fitting. Used to join sections of cover together.  | Off White | 10             | 100            |
| <b>TG70BC</b>  | Base coupler fitting. Each piece includes two base coupler halves for joining sections of TG-70 base together.   | Off White | 10             | —              |
| <b>TGRAIW</b>  | Right angle fitting. Used to join sections of TG raceway at 90° flat junctions.  | Off White | 1              | 10             |
| <b>TGICIW</b>  | Inside corner fitting. Used to join sections of TG raceway at inside corners. Fittings adjust from 85° to 135° to adapt to non-square corners.                                       | Off White | 1              | —              |
| <b>TGSICIW</b> | Inside corner fitting – non-adjustable. Used to join sections of TG raceway at inside corners.   | Off White | 1              | 10             |
| <b>TGOCIW</b>  | Outside corner fitting. Used to join sections of TG raceway at outside corners. Fittings adjust from 85° to 135° to adapt to non-square corners.                                     | Off White | 1              | —              |
| <b>TGSOCIW</b> | Outside corner fitting – non-adjustable. Used to join sections of TG raceway at inside corners.  | Off White | 1              | 10             |
| <b>TGTIW</b>   | Tee fitting. Used to join sections of TG raceway at tee intersections.   | Off White | 1              | 5              |
| <b>TGTD</b>    | Tee divider insert. Mounts inside TGT tee fitting to maintain channel separation in TG raceway at tee intersections.   | Gray      | 1              | 5              |
| <b>TGECIW</b>  | End cap. Used to terminate or allow entry to TG raceway. Two knockouts each for .50" (12.7mm) and 1" (25.4mm) conduit.   | Off White | 1              | 10             |
| <b>TGEEIW</b>  | Entrance end fitting. Accepts large conduit, (up to 2") in line <i>or</i> at a right angle. Maintains a 40mm bend radius with a removable insert and channel separation.             | Off White | 1              | 10             |
| <b>TGTRIW</b>  | Transition fitting from TG to T-45. Provides a tee transition from TG raceway to T-45 and LD series size 5 and 10. Use with RF5X3 reducer fitting to transition to LD series size 3. | Off White | 1              | 10             |
| <b>TGBFIW</b>  | Backfeed fitting. Features breakouts to enter through the bottom of the fitting and maintains bend radius control with a removable, bend radius insert and channel separation.       | Off White | 1              | 10             |
| <b>TGBFI</b>   | Backfeed fitting insert. Removable and maintains bend radius control.  | Off White | 1              | 10             |

T70SDB-X

TG70HB3-X

TG70HB3GFCI-X

TG70WR-X

TGFSB

TGFSB installed in TG-70 raceway

| Part Number          | Part Description  | Color | Std. Pkg. Qty. | Std. Ctn. Qty. |
|----------------------|---|-------|----------------|----------------|
| <b>T70DB-X</b>       | Device mounting bracket. Used to mount NEMA standard single gang electrical outlets and communication devices with either screw-on or snap-on single gang faceplates. Can be used with T-70, Twin-70, and TG-70 raceway.  | Gray  | 10             | —              |
| <b>T70SDB-X</b>      | Standard faceplate bracket. Used to mount NEMA standard 70mm single gang screw-on faceplates. Can be used with T-70, Twin-70, TG-70 raceway and PAN-POLE™ Communication Pole.   | Gray  | 10             | —              |
| <b>TG70HB3-X</b>     | 3-sided hanging box. Mounts standard electrical outlets or communication devices with either NEMA standard single gang screw-on or PANDUIT snap-on faceplates. When used with TGDW divider wall, box separates and fully encloses device to provide cabling separation.                                 | Gray  | 10             | —              |
| <b>TG70HB3GFCI-X</b> | GFCI 3-sided hanging box. Accepts single gang U.S. GFCI (ground fault circuit interrupter) standard electrical devices. Provides increased internal area for connections and excess wire.   | Gray  | 10             | —              |
| <b>TG70WR-X</b>      | Wire retainer. Holds wires in place during installation.  | Gray  | 10             | 100            |
| <b>TGFSB</b>         | Fiber spool bracket. Each piece consists of two halves that snap into base of TG raceway. Provides method to contain one meter or more of fiber slack and acts as a strain relief while maintaining a minimum 32mm bend radius. Bracket separation can be adjusted to fit the length of slack required. | Gray  | 1              | 10             |

## Cable Fill Capacities for TG-70 Raceway

This information is to be used as a guide in selecting the proper size raceway. The maximum amounts may vary according to the cable installation methods, straightness of cables, etc.

**A = 10.09 in.<sup>2</sup>**

**Cable fill #1:** With data only using screw-on faceplates and devices.

**A = 10.68 in.<sup>2</sup>**

**Cable fill #2:** With data only using snap-on faceplates and wire retainer.

**A = 10.85 in.<sup>2</sup>**

**Cable fill #3:** With wire retainer.

**A = 3.16 in.<sup>2</sup>**

**A = 7.20 in.<sup>2</sup>**

**Cable fill #4:** Divided (see 5A and 5B for power and data applications).

**A = 3.08 in.<sup>2</sup>**

**A = 5.58 in.<sup>2</sup>**

**Cable fill #5:** With Power and data using snap-on faceplates and 3-sided power box.

| Raceway Type and Configuration   | Fill Area (in. <sup>2</sup> ) | Electrical Cables |        |        | Data Grade Cables |       | Data Grade Cables |       | Audio/Video  |       | Fiber Optic Cable |       |

## NOTES

## PAN-WAY® T-70 AND TWIN-70 NON-METALLIC SURFACE RACEWAY

PAN-WAY® T-70 and Twin-70 Non-Metallic Surface Raceways are multi-channel raceways which provide solutions for routing copper, fiber optic, and/or power cabling along fixed perimeter walls. T-70 features the *WORKSTATION OUTLET CENTER™* Offset Box which provides an offset solution to maximize channel capacity and outlet density. Twin-70 offers two totally independent channels maintained throughout the system for independent access to power, copper, and fiber optic cabling.

- Aesthetically pleasing
- Lightweight
- Tamper resistant
- Fittings maintain 1 inch bend radius control
- T-70 utilizes a single channel with snap-in divider wall to provide multi-channel capability
- Twin-70 utilizes two independent channels and covers to provide multi-channel capability

The T-70 and Twin-70 raceway systems consist of raceway base and cover, fittings, termination hardware and accessories. PAN-WAY® T-70 and Twin-70 Raceway can mount NEMA standard screw-on faceplates or superior PAN-WAY® Snap-On Faceplates directly to the channel. Fittings for T-70 and Twin-70 are available to transition to T-70, Twin-70, T-45 and LD raceways.

## PAN-WAY® T-70 Surface Raceway System

B1. Cable Ties

- UL and CSA rated 600 V; meets UL 5A and CSA C22.2 No. 62.1-03 standards; FT4 rated
- Large cable capacity with aesthetically pleasing design
- Tamper resistant

- Compatible with NEMA standard 70mm faceplates or PAN-WAY® Classic Series Snap-On Faceplates
- Transitions to PANDUIT T-45 and LD profile raceway
- Supplied with pre-punched mounting holes

B2. Cable Accessories

B3. Stainless Steel Ties

## PAN-WAY® T-70 and Twin-70 Raceway Accessories

B1. Cable Ties

- T-70 and Twin-70 raceway accessories consist of device mounting brackets, snap-on device brackets, hanging boxes and 3-sided hanging boxes used to mount NEMA standard single gang electrical outlets and or communication devices

B2. Cable Accessories

| Part Number         | Part Description   | Color | Std. Pkg. Qty. | Std. Ctn. Qty. |
|---------------------|--|-------|----------------|----------------|
| <b>T70DB-X</b>      | Device mounting bracket. Used to mount NEMA standard single gang electrical outlets and communication devices with either screw-on or snap-on single gang faceplates. Can be used with T-70, Twin-70, and TG-70 raceway.   | Gray  | 10             | —              |
| <b>T70SDB-X</b>     | Standard faceplate bracket. Used to mount NEMA standard 70mm single gang screw-on faceplates. Can be used with T-70, Twin-70, TG-70 raceway and PAN-POLE™ Communication Pole.  | Gray  | 10             | —              |
| <b>T70HB-X</b>      | Hanging box. Used to mount NEMA standard single gang electrical outlets and devices with either screw-on or snap-on single gang faceplates when there are communications cables in the raceway. For use in T-70 and Twin-70 raceway only.  | Gray  | 10             | —              |
| <b>T70HB3-X</b>     | 3-sided hanging box. Used to mount NEMA standard single gang electrical outlets and devices with either screw-on or snap-on single gang faceplates when there are communications cables in the raceway. Box is low profile for increased channel capacity and does not require breakout removal. For use with T-70 and Twin-70 raceway only. | Gray  | 10             | —              |
| <b>T70HB3GFCI-X</b> | T70 GFCI 3-sided hanging box. Accepts single gang U.S. GFCI (ground fault circuit interrupter) standard electrical devices. Provides increased internal area for connections and excess wire.  | Gray  | 10             | —              |
| <b>T70WR-X</b>      | Wire retainer. Holds wires in place during installation.   | Gray  | 10             | 100            |
| <b>T70S-X</b>       | Spacer plate. Used to mount the CBX4 surface mount box onto the T70DB-X or T70HB-X/T70HB3-X.   | —     | 10             | —              |
| <b>T70FSB</b>       | Fiber spool bracket. Each piece consists of two halves that snap into base of T-70 or Twin-70 raceway. Provides method to contain one meter or more of fiber slack and acts as a strain relief while maintaining a minimum 30mm bend radius. Bracket separation can be adjusted to fit the length of slack required.                         | Gray  | 1              | 10             |

Use the T70FSB with T-70 or Twin-70 raceway to contain 1m or more of fiber slack while maintaining a 30mm cable bend radius. Brackets are adjustable for slack length.

Use T70S-X spacer plate for mounting the CBX4 surface mount box on T-70 or T702.

## Cable Fill Capacities for T-70 Raceway

This information is to be used as a guide in selecting the proper size raceway. The maximum amounts may vary according to the cable installation methods, straightness of cables, etc.

**A = 5.15 in.<sup>2</sup>**

**Cable fill #1:** Raceway with no devices.

**A = .86 in.<sup>2</sup>      A = 1.72 in.<sup>2</sup>**

**Cable fill #2:** Power and data using 3-sided hanging box and device bracket.

**A = 3.67 in.<sup>2</sup>**

**Cable fill #3:** Data only using vertical sloped screw-on communication faceplates.

**A = 4.71 in.<sup>2</sup>**

**Cable fill #4:** Data only using horizontal sloped snap-on communication faceplates.

**A = .91 in.<sup>2</sup>      A = 3.12 in.<sup>2</sup>**

**Cable fill #5:** Power and data using the *WORKSTATION OUTLET CENTER™* Offset Box.

**SPEC = 40% cable fill** – The recommended design in cable capacity, leaves room for future moves, adds, and changes.

**MAX for Data = 60% cable fill** – The maximum cable quantity based on cable interweaving and packing factors.

**MAX for Power cable fill** – The maximum of electrical cables based on UL temperature rise test.

AWG dimensions represent typical outer cable diameter in inches.

## PAN-WAY® T-45 Non-Metallic Surface Raceway

PAN-WAY® T-45 Non-Metallic Surface Raceway is a multi-channel raceway which provides a solution for routing copper, fiber optic, and/or power cabling along fixed perimeter walls. T-45 surface raceway terminates using the T-45 hinged data and power brackets, T-45 offset box, and select PAN-WAY® Surface Mount Outlet Boxes.

- Multi-directional cover hinge allows cable installation from either side
- Hinged data and power brackets provide easy access for terminating outlets
- Aesthetically pleasing
- Lightweight
- Tamper resistant
- Fittings maintain 1 inch bend radius control

PAN-WAY® T-45 Surface Raceway accepts NEMA standard screw-on faceplates for superior PAN-WAY® Snap-On Faceplates when terminating with the T-45 offset box and surface mount outlet boxes. Fittings for T-45 are available to transition to PAN-WAY® LD Series Raceway.

A. System Overview

## PAN-WAY® T-45 Surface Raceway System

B1. Cable Ties

- UL and CSA rated 600 V; meets UL 5A and CSA C22.2 No. 62.1-03 standards; FT4 rated
- Hinged cover allows easy access from either side
- Optional factory applied adhesive backing speeds installation

- Supplied with pre-punched mounting holes
- Tamper resistant
- Terminates using the T-45 hinged data or power brackets, offset box, or surface mount outlet box solutions

B2. Cable Accessories

B3. Stainless Steel Ties

T-45  
Internal Area = 2.12 Sq. In.

| <b>T45CIW8</b>                            | T-45 raceway cover in 8' and 10' lengths. Can be hinged open on either side of T-45 base.   | —                               | Off White | 8            | 160            |
| <b>T45CIW10</b>                           |   |                                 |           | 10           | 200            |
| <b>T-45 Raceway Divider Wall</b>          |   |                                 |           |              |                |
| <b>T45DW8</b>                             | T-45 divider wall. Snaps onto rails in T-45 raceway base to create separate channels. Must use wire retainers to ensure channel separation per UL/CSA. Available in 8' and 10' lengths. | —                               | Gray      | 8            | 160            |
| <b>T45DW10</b>                            |   |                                 |           | 10           | 200            |

‡For other colors replace IW (Off White) with EI (Electric Ivory).  
Order base and cover separately.  
Order number of feet required in multiples of standard carton quantity.

## PAN-WAY® T-45 Raceway Fittings

- T-45 fittings are designed to maintain the TIA/EIA-568-B and 569-B required minimum bend radius for high performance copper and fiber optic cabling systems

| Part Number      | Part Description   | Color‡    | Std. Pkg. Qty. | Std. Ctn. Qty. |
|------------------|--|-----------|----------------|----------------|
| <b>T45CCIW-X</b> | Cover coupler fitting. Used to join two pieces of T-45 cover together.   | Off White | 10             | 100            |
| <b>T45RAIW</b>   | Right angle fitting. Used to join sections of T-45 raceway at 90° flat junction.   | Off White | 1              | 10             |
| <b>T45ICIW</b>   | Inside corner fitting. Used to join T-45 raceway at inside corner.   | Off White | 1              | 10             |
| <b>T45OCIW</b>   | Outside corner fitting. Used to join T-45 raceway at 90° outside corner.   | Off White | 1              | 10             |
| <b>T45TIW</b>    | Tee fitting. Used to join T-45 raceway at tee intersections.   | Off White | 1              | 10             |
| <b>T45TD</b>     | Divided insert. Used to separate power and data within the T45T.   | Gray      | 1              | 10             |
| <b>T45ECIW</b>   | End cap fitting. Used to terminate T-45 raceway.   | Off White | 1              | 10             |
| <b>T45EEIW</b>   | Entrance end fitting. With knockouts for 1/2", 3/4", 1" and 1 1/4" conduit which allows entry from ceiling or wall.  | Off White | 1              | 10             |
| <b>T45RLDIW</b>  | Reducer fitting. Reduces from T-45 to LD10 profile raceway.  | Off White | 1              | 10             |
| <b>T45TRI</b>    | Provides bend radius control at transition from T-70 to T-45 when used with T70TR.   | Gray      | 1              | 10             |
| <b>T45HDBIW</b>  | Snap-on hinged data bracket. Used for mounting <i>PANDUIT® MINI-COM®</i> Modules vertically inline within T-45 raceway. Can be hinged opened on either side of T-45 base.  | Off White | 1              | 10             |
| <b>T45HEBIW</b>  | Electrical bracket and box. Used for mounting standard duplex electrical outlets.  | Off White | 1              | 10             |
| <b>T45HEGBIW</b> | Electrical bracket and box. Used for mounting standard rectangular style electrical outlets.   | Off White | 1              | 10             |
| <b>T45WR-X</b>   | Wire retainers. Used to hold wires in place during installation.   | Gray      | 10             | 100            |
| <b>T45WCIW</b>   | Offset box. Allows for the mounting of any standard electrical or communication outlet offset from the raceway channel. Box accepts any NEMA standard screw-on faceplate or <i>PAN-WAY®</i> Electrical Snap-On Faceplates. | Off White | 1              | 10             |
| <b>T45WC2IW</b>  | Offset box. Box accepts any <i>PAN-WAY®</i> Communication Snap-On Faceplates.  | Off White | 1              | 10             |

‡For other colors replace IW (Off White) with EI (Electric Ivory). T45TD, T45TRI, and T45WR-X available in Gray only.

A. System Overview

## Cable Fill Capacities for T-45 Raceway

This information is to be used as a guide in selecting the proper size raceway. The maximum amounts may vary according to the cable installation methods, straightness of cables, etc.

B1. Cable Ties

A = 2.13 in.<sup>2</sup>

**Cable fill #1:** T-45 with no devices.

A = 1.72 in.<sup>2</sup>

**Cable fill #2:** T-45 with wire retainer.

A = .44 in.<sup>2</sup>

B = 1.20 in.<sup>2</sup>

**Cable fill #3:** Power and data using a wire retainer and divider wall.

B2. Cable Accessories

B3. Stainless Steel Ties

A = .44 in.<sup>2</sup>

B = .68 in.<sup>2</sup>

C = .44 in.<sup>2</sup>

**Cable fill #4:** Power and data using a wire retainer and divider walls.

A = .41 in.<sup>2</sup>

B = 1.06 in.<sup>2</sup>

**Cable fill #5:** Power and data using the offset box.

C1. Wiring Duct

C2. Surface Raceway

C3. Abrasion Protection

C4. Cable Management

A = 2.00 in.<sup>2</sup>

**Cable fill #6:** Data only using hinged data bracket.

A = .52 in.<sup>2</sup>

B = 1.2 in.<sup>2</sup>

**Cable fill #7:** Power and data using hinged data bracket with divider insert.

A = .22 in.<sup>2</sup>

B = .5 in.<sup>2</sup>

**Cable fill #8:** Power and data using electrical bracket/box and hinged data bracket.

D1. Terminals

**SPEC = 40% cable fill** – The recommended design in cable capacity, leaves room for future moves, adds, and changes.

**MAX for Data = 60% cable fill** – The maximum cable quantity based on cable interweaving and packing factors.

**MAX for Power cable fill** – The maximum of electrical cables based on UL temperature rise test.

AWG dimensions represent typical outer cable diameter in inches.

## PAN-WAY® SNAP-ON FACEPLATES AND SURFACE MOUNT OUTLET BOXES

PAN-WAY® Snap-On Faceplates are designed for use with PANDUIT surface raceway systems and install faster than conventional screw-on faceplates, reducing labor costs and providing a more aesthetic appearance. PAN-WAY® Snap-On Communication Faceplates are available in vertical and horizontal orientation and accept PANDUIT® MINI-COM® Copper and Fiber Optic Modules. Electrical outlets are available in colors to complement PANDUIT raceway and are available in 20 A, 106 duplex, rectangular, TVSS and GFCI.

- Snap-on faceplates install without the use of screws providing faster installation and superior aesthetics
- FAST-SNAP™ Boxes assemble without the use of screws and accept PAN-WAY® Snap-On Faceplates
- Snap-on communication faceplates are available in horizontal or vertical sloped outlet configurations
- Snap-on electrical faceplates are available in 106 duplex or rectangular styles

Surface mount outlet boxes are available for both power and communication applications. They are compatible with PAN-WAY® LD, LDPH, LD2P10 and T-45 Raceway Systems. PAN-WAY® Snap-On Faceplates mount directly to Cove, TG-70, T-70, Twin-70 raceways, PAN-WAY® FAST-SNAP™ Boxes and PAN-POLE™ Aluminum Outlet Poles.

## PANDUIT® NETKEY® Snap-On Sloped Keystone Faceplates

B1. Cable Ties

- Accept all PANDUIT® NETKEY® Keystone Copper Modules and Duplex Fiber Optic Modules
- Snap into raceway channel, requires no additional mounting hardware or adapters – greatly reducing installation time
- Lowest cost for moves, adds, and changes

- Tamper resistant
- Can be used with PAN-WAY® Cove, TG-70, T70, Twin-70, T-45 Raceway Systems, FAST-SNAP™ Outlet Boxes, and PAN-POLE™ Aluminum Outlet Poles

‡For other color replace IW (Off White) with EI (Electric Ivory).

## Selection Chart for using *PAN-WAY*® Surface Raceway with *PAN-WAY*® Surface Mount Outlet Boxes

How to use this chart:

1. Locate the desired *PAN-WAY*® Raceway in the left column.
2. Locate the desired *PAN-WAY*® Outlet Box in the top row.
3. Match up the raceway with the outlet box to see if they are compatible (Y = yes, N = no).
4. Select correct surface mount outlet box.

| <i>PAN-WAY</i> ® Surface Mount Outlet Boxes             |                                    |      |       |          |               |                          |                      |       |   |

## NOTES

## PAN-WAY® LD PROFILE NON-METALLIC SURFACE RACEWAY

PAN-WAY® LD Profile Raceway is available in single and multi-channel styles to provide a solution for routing copper, fiber optic, and power cabling along fixed perimeter walls.

- LD2P10 features one-piece multi-channel design for both power and data applications
- LDPH is a tamper resistant two-piece latching surface raceway supplied with pre-applied adhesive backed tape
- LD features one-piece single channel design for data routing
- LDS features one-piece single channel tamper resistant design with maximum security for power OR data applications

PAN-WAY® LD Profile Raceways include a full complement of fittings for standard, bend radius control, power rated and multi-channel use, and transition easily to other PANDUIT raceway such as Cove, TG-70, T-70, Twin-70 and T-45.

## PAN-WAY® Type LD2P10 Multi-Channel Surface Raceway System

- UL and CSA rated 600 V; meets UL 5A and CSA C22.2 No. 62.1-03 standards; FT4 rated
- Routes power and data together
- One-piece hinged design allows cables to be laid in
- Tamper resistant

- Factory applied adhesive backing speeds installation
- Terminates using JBP1D, JBP2D, JBP2FS or JBP2S surface mount outlet box solutions

Left Internal Area = .43 Sq. In.  
Right Internal Area = .50 Sq. In.

| Part Number         | Part Description  | Raceway Size      | Color‡    | Length (Ft.) | Std. Ctn. Qty. |
|---------------------|---|-------------------|-----------|--------------|----------------|
| <b>LD2P10IW8-A</b>  | Two channel tamper resistant one-piece latching surface raceway. Supplied with pre-applied adhesive backed tape. Available in 8' and 10' lengths. | 1.52" x .86"      | Off White | 8            | 160            |
| <b>LD2P10IW10-A</b> |   | (39.0mm x 22.0mm) |           | 10           | 200            |

LD2P raceway requires screw mounting if it is being used for power cabling applications. Order number of feet required in multiples of standard length increments.

‡For other colors replace IW (Off White) with EI (Electric Ivory), IG (International Gray), or WH (White).

## Multi-Channel Fittings for LD2P10

- Multi-channel fittings for LD2P10 are designed to maintain the TIA/EIA-568-B and 569-B required minimum bend radius for high performance copper and fiber optic cabling systems

| Part Number       | Part Description   | Color‡    | Std. Pkg. Qty. |
|-------------------|--|-----------|----------------|
| <b>CFX10IW-X</b>  | Coupler fitting for use with LD10, LDPH10, and LD2P10 raceway.   | Off White | 10             |
| <b>RAFX10IW-X</b> | Right angle fitting for use with LDPH10 and LD2P10 raceway.  | Off White | 10             |
| <b>ICFX10IW-X</b> | Inside corner fitting for use with LDPH10 and LD2P10 raceway.  | Off White | 10             |
| <b>OCFX10IW-X</b> | Outside corner fitting for use with LDPH10 and LD2P10 raceway.   | Off White | 10             |
| <b>TFXD10IW-X</b> | Tee fitting with divided insert to maintain separation of power and data cabling. For use with LD2P10 raceway. | Off White | 10             |
| <b>ECFX10IW-X</b> | End cap fitting for use with LDPH10 and LD2P10 raceway.  | Off White | 10             |
| <b>EEFXIW</b>     | Entrance end fitting for LD2P10 raceway. Breakouts for 1/2" and 3/4" diameter conduit.                         | Off White | 1              |

‡For other colors replace IW (Off White) with EI (Electric Ivory), IG (International Gray), or WH (White).

## PAN-WAY® LDS Surface Raceway System

B1. Cable Ties

• UL and CSA rated 600 V; meets UL 5A and CSA C22.2 No. 62.1-03 standards; FT4 rated

• LDS raceway requires screw mounting using the LMD mounting straps for power cabling installations

B2. Cable Accessories

• Tamper resistant non-hinged design  
• Factory applied adhesive backing speeds installation  
• Type LDS is **the only non-metallic raceway that is bendable** in low voltage applications to route around and over obstructions

• Terminates using surface mount outlet box solutions or *PANDUIT® MINI-COM®* Surface Mount Boxes

## Method for Bending Type LDS Raceway (Low Voltage Applications)

1) Slide 18" to 30" section of LDS Raceway into PVC pipe heating blanket.  
\*(Recommended blanket designed for bending 1/2" to 1 1/2" PVC conduit.)

2) Allow section to heat approximately 2 – 3 minutes. Raceway will be soft and pliable, but should not stretch. (Time will vary with blanket temperature and raceway size.)

3) Remove raceway section from blanket and hold in desired position until the raceway cools. Install mounting straps immediately.

\*Heating blanket not offered by *PANDUIT*.

## One Inch Bend Radius Fittings for TIA/EIA Compliance

B1. Cable Ties

- 1 inch bend radius fittings are designed to maintain the TIA/EIA-568-B and 569-B required minimum bend radius for high performance copper and fiber optic cabling systems

| Part Number       | Part Description  | Color‡    | Std. Pkg. Qty. |
|-------------------|---|-----------|----------------|
| <b>CFX3IW-X</b>   | Coupler fitting for use with LD3, LDPH3, and LDS3 raceway.  | Off White | 10             |
| <b>CFX5IW-X</b>   | Coupler fitting for use with LD5, LDPH5, and LDS5 raceway.  | Off White | 10             |
| <b>CFX10IW-X</b>  | Coupler fitting for use with LD10, LDPH10, and LD2P10 raceway.  | Off White | 10             |
| <b>RAFC3IW-X</b>  | Right angle fitting for use with LD3, LDPH3, and LDS3 raceway.  | Off White | 10             |
| <b>RAFC5IW-X</b>  | Right angle fitting for use with LD5, LDPH5, and LDS5 raceway.  | Off White | 10             |
| <b>RAFC10IW-X</b> | Right angle fitting for use with LD10 and LDPH10 raceway.   | Off White | 10             |
| <b>ICFC3IW-X</b>  | Inside corner fitting for use with LD3, LDPH3, and LDS3 raceway.  | Off White | 10             |
| <b>ICFC5IW-X</b>  | Inside corner fitting for use with LD5, LDPH5, and LDS5 raceway.  | Off White | 10             |
| <b>ICFC10IW-X</b> | Inside corner fitting for use with LD10 and LDPH10 raceway.   | Off White | 10             |
| <b>OCFX3IW-X</b>  | Outside corner fitting for use with LDPH3 and LDS3 raceway.   | Off White | 10             |
| <b>OCFX5IW-X</b>  | Outside corner fitting for use with LDPH5 and LDS5 raceway.   | Off White | 10             |
| <b>OCFX10IW-X</b> | Outside corner fitting for use with LDPH10 and LD2P10 raceway.  | Off White | 10             |
| <b>TFC3IW-X</b>   | Tee fitting for use with LD3, LDPH3, and LDS3 raceway.  | Off White | 10             |
| <b>TFC5IW-X</b>   | Tee fitting for use with LD5, LDPH5, and LDS5 raceway.  | Off White | 10             |
| <b>TFC10IW-X</b>  | Tee fitting for use with LD10 and LDPH10 raceway.   | Off White | 10             |
| <b>CRFC5IW-X</b>  | 4-way cross fitting for use with LD5, LDPH5, and LDS5 raceway.  | Off White | 10             |
| <b>ECFX3IW-X</b>  | End cap fitting for use with LDPH3 and LDS3 raceway.  | Off White | 10             |
| <b>ECFX5IW-X</b>  | End cap fitting for use with LDPH5 and LDS5 raceway.  | Off White | 10             |
| <b>ECFX10IW-X</b> | End cap fitting for use with LDPH10 and LD2P10 raceway.   | Off White | 10             |
| <b>DCEFXIW-X</b>  | Drop ceiling/entrance end fitting for use with LD3, LDPH3, LDS3, LD5, LDPH5, LDS5, LD10 and LDPH10 raceway. Use CA3 or CA5 adapters for LD3 or LD5 profile raceway. | Off White | 10             |
| <b>RAEFXIW-X</b>  | Right angle/entrance end fitting for use with LD3, LDPH3, LDS3, LD5, LDPH5, LDS5, LD10 and LDPH10 raceway. CA3 or CA5 adapters for LD3 or LD5 profile raceway.      | Off White | 10             |
| <b>RFX53IW-X</b>  | Reducer fitting for use with LD3, LDPH3, LDS3, LD5, LDPH5 and LDS5 raceway. For in-line terminations, use with CFX5**.  | Off White | 10             |
| <b>RFX103IW-X</b> | Reducer fitting for use with LD3, LDPH3, LD10 and LDPH10 raceway. For in-line terminations, use with CFX10**.   | Off White | 10             |
| <b>RFX105IW-X</b> | Reducer fitting for use with LD5, LDPH5, LDS5, LD10 and LDPH10 raceway. For in-line terminations, use with CFX10**.   | Off White | 10             |

‡For other colors replace IW (Off White) with EI (Electric Ivory), IG (International Gray), or WH (White).

F. Index

**SPEC = 40% cable fill** – The recommended design in cable capacity, leaves room for future moves, adds, and changes.

**MAX for Data = 60% cable fill** – The maximum cable quantity based on cable interweaving and packing factors.

**MAX for Power cable fill** – The maximum of electrical cables based on UL temperature rise test.

AWG dimensions represent typical outer cable diameter in inches.

## Floor Guard

- Accessory to route cables over carpet, concrete, or tile to prevent tripping
- Flexible vinyl material can be easily cut to specific lengths
- Cables route through underside of product

FG1  
FG3

| Part Number      | Part Description  | Color‡         | Std. Pkg. Qty. |
|------------------|---|----------------|----------------|
| <b>FG1EI6-A</b>  | Flexible vinyl material used to route cabling over carpet, tile, and concrete. Product available in 6' and 50' rolls. | Electric Ivory | 1              |
| <b>FG1EI50-A</b> | Flexible vinyl material used to route cabling over carpet, tile, and concrete. Product available in 6' and 50' rolls. | Electric Ivory | 30             |
| <b>FG3EI50-A</b> | Flexible vinyl material used to route cabling over carpet, tile, and concrete. Product available in 6' and 50' rolls. | Electric Ivory | 1              |
| <b>FG3EI6S-A</b> | Flexible vinyl material used to route cabling over carpet, tile, and concrete. Product available in 6' and 50' rolls. | Electric Ivory | 30             |

Mounting tape is pre-applied only to FG3 in 6' lengths.

‡For other colors replace EI (Electric Ivory) with BR (Brown), YL (Safety Yellow) or BL (Black).

## PAN-WAY® Surface Raceway Cutting Tool

| Part Number | Part Description   | Std. Pkg. Qty. | Std. Ctn. Qty. |
|-------------|--|----------------|----------------|
| <b>SRT</b>  | Used to cut all LD profile raceway. Leaves a clean burr-free finish on raceway. Can also be used to cut plastic conduit. | 1              | 10             |

## PAN-WAY® COVE RACEWAY

PAN-WAY® Cove Raceway is a full line of NEC and TIA/EIA compliant raceway, which has the appearance of architectural molding; that allows you to route, conceal, protect and terminate copper, voice, video, fiber optic or power cabling. This offering adds elegance to any room or work area by softening the horizontal angles between the wall and ceiling or the vertical angles between two walls.

- UL and CSA rated 600 V
- Bend radius control is maintained throughout the entire system as required by TIA/EIA-568-B and 569-B
- Product mounts high out of reach for increased tamper resistance
- Divided channel system allows for routing and terminations of both power and data cabling
- Raceway and fitting covers may be painted to match any décor

PAN-WAY® Cove Raceway includes a full complement of fittings and transitions easily to other PANDUIT raceway such as LD, LDPH, LD2P10, T-45 and T-70.

A. System Overview

## PAN-WAY® Cove Raceway System

B1. Cable Ties

- UL and CSA rated 600 V; meets UL 5A and CSA C22.2 No. 62.1-03 standards; FT4 rated
- Bend radius control is maintained throughout the entire cove raceway system as required by TIA/EIA-568-B and 569-B

- Tamper resistant
- Transitions to *PANDUIT* T-70, T-45, and LD profile raceway
- Cove raceway and fittings may be painted to blend with any decor
- Supplied with pre-punched mounting holes

B2. Cable Accessories

B3. Stainless Steel Ties

| <b>WCM35DW8</b>                  | Cove raceway divider wall. Snaps onto rails in cove raceway base to create separate channels. Must use wire retainers to ensure channel separation per UL/CSA. Available in 8' lengths. | —                               | Gray      | 8            | 64             |

†All parts available in IW (Off White) only except for WCM35DW8 which is available in gray only. Order number of feet required in multiples of standard carton quantity. Order raceway base and cover separately.

## PAN-WAY® Cove Raceway Fittings

- Cove raceway fittings are designed to maintain the TIA/EIA-568-B and 569-B required minimum bend radius for high performance copper and fiber optic cabling systems

| Image | Part Number                          | Part Description  | Color‡            | Std. Pkg. Qty. | Std. Ctn. Qty. |

## Cable Fill Capacities for Cove Raceway

This information is to be used as a guide in selecting the proper size raceway. The maximum amounts may vary according to the cable installation methods, straightness of cables, etc.

B1. Cable Ties

B2. Cable Accessories

B3. Stainless Steel Ties

A = 5.4 in.<sup>2</sup>

**Cable fill #1:** Open channel without devices.

A = 5.0 in.<sup>2</sup>

**Cable fill #2:** Open channel with wire retainer.

3A = 2.4 in.<sup>2</sup>    3B = 2.4 in.<sup>2</sup>

**Cable fill #3:** Divided channel (power and data) with wire retainer and divider wall.

C2. Surface Raceway

C3. Abrasion Protection

C4. Cable Management

A = 1.6 in.<sup>2</sup>

A = 1.4 in.<sup>2</sup>

**Cable fill #4:** Divided channel (power and data) with device box and faceplate.

A = 1.8 in.<sup>2</sup>

A = 2.4 in.<sup>2</sup>

**Cable fill #5:** Divided channel (power and data) with low profile transition insert.

D1. Terminals

D2. Power Connectors

D3. Grounding Connectors

**SPEC = 40% cable fill** – The recommended design in cable capacity, leaves room for future moves, adds, and changes.

**MAX for Data = 60% cable fill** – The maximum cable quantity based on cable interweaving and packing factors.

**MAX for Power cable fill** – The maximum of electrical cables based on UL temperature rise test.

AWG dimensions represent typical outer cable diameter in inches.

## PAN-WAY® OFFICE FURNITURE RACEWAY

PAN-WAY® Office Furniture Raceway is a one-piece single channel system designed to route data cabling along the top of office furniture partitions. Outlets can be positioned at any point along the partition at desk level or in the corner at the intersection of two partitions. Office furniture raceway has a tamper resistant closure design, which protects sensitive cabling from accidental damage and discourages unauthorized access, yet the system is accessible by a qualified installer for moves, adds, and changes.

- Designed for desktop terminations which utilize the typically unused area of the cubicle
- Fittings meet TIA/EIA bend radius requirements preventing cable performance degradation, yet maintain original aesthetic “squared corner” styling of furniture
- Designed to work with major office furniture manufacturer’s panels (such as STEELCASE\*, HERMAN MILLER® and others)
- Robust design includes a one-piece hinge and tamper resistant closure design which increases product stability and reduces inadvertent or unauthorized access to data cabling
- Designed for use with PANDUIT connectivity; also accepts common manufacturers’ connectivity with use of a NEMA standard 70mm faceplate or module frame

The system includes a full complement of fittings, accessories, and termination options. PAN-WAY® Office Furniture Raceway is available in four popular colors to blend with most office furniture systems and creates a virtually invisible cost effective routing solution.

\*STEELCASE is a registered trademark of Steelcase Development, Inc.

\*HERMAN MILLER is a registered trademark of Herman Miller, Inc., Zeeland MI.

- UL listed in accordance with UL 5C requirements for Class 2 Communication Cable Management Systems
- Maintains bend radius control throughout the entire office furniture raceway system as required by TIA/EIA-568-B and 569-B
- Faceplates are compliant with the labeling requirements of the TIA/EIA-606-A standard
- Robust design and tamper resistant closure increases product stability and prevents damage to cabling during and after installation
- Product supplied with adhesive backing for fast and easy installation
- Creates a virtually invisible solution for routing data cables on panels from all common manufacturers with a top cap width between 1.88 and 2.30 inches
- Designed for use with *PAN-NET®* Connectivity, also accepts all common manufacturers' connectivity with use of a NEMA standard 70mm faceplate or module frame

| Part Number        | Part Description  | Labels Required | Color‡       | Std. Pkg. Qty. | Std. Ctn. Qty. |
|--------------------|---|-----------------|--------------|----------------|----------------|
| <b>OFRCR70ECOB</b> | Corner raceway end cap fitting. Opening allows cord passage through fitting such as monitor and keyboard cables. Supplied with adhesive tape.   | —               | Office Beige | 1              | 10             |
| <b>OFR20SOOB</b>   | Spill-over fitting. Allows transition from office furniture raceway run horizontally along partition wall to office furniture vertical raceway in one location. Adjustable fitting maintains 1" minimum bend radius of cabling and works with various panel widths between 1.88"– 2.30" (47.7mm - 58mm). Supplied with adhesive tape. | —               | Office Beige | 1              | 10             |
| <b>OFR20DSOOB</b>  | Double spill-over fitting. Fitting is used to spill over both sides of the furniture partitions at the same location. Incorporates a built-in, yet removable end cap that eliminates the need for additional raceway and fittings to terminate the pathway.   | —               | Office Beige | 1              | 10             |
| <b>OFR20DMBOB</b>  | Desk mount box. Box accepts office furniture snap-on faceplates as well as 70mm NEMA standard screw-on faceplates. Designed for use with OFVR5**6 raceway and OFR20SO**, OFR20DSO** spill-over fittings. Supplied with adhesive tape.   | —               | Office Beige | 1              | 10             |
| <b>OFR20MPTOB</b>  | Mid-panel tee fitting. Used to connect communication pole to office furniture raceway run horizontally along partition wall. Supplied with adhesive tape. Note: not intended for use at intersection of furniture panels.   | —               | Office Beige | 1              | 10             |
| <b>OFR20WEOB</b>   | Wall entrance fitting. Allows entry from wall to office furniture raceway run horizontally along partition walls. Fitting includes bend radius protection and trim plate to cover wall opening. Requires minimum wall opening of 4.5"W x 3.0"H (114.3mm x 76.2mm). Supplied with adhesive tape.                                       | —               | Office Beige | 1              | 10             |
| <b>OFR20RAOB</b>   | Right angle fitting. Used to join sections of office furniture raceway at 90° flat junction. Supplied with adhesive tape.   | —               | Office Beige | 1              | 10             |
| <b>OFR20TOB</b>    | Tee fitting. Used to create an undivided tee junction between sections of office furniture raceway. Supplied with adhesive tape.  | —               | Office Beige | 1              | 10             |
| <b>OFR20CROB</b>   | Cross fitting. Used to join sections of office furniture raceway at four corners. Supplied with adhesive tape.  | —               | Office Beige | 1              | 10             |

‡For other colors, replace OB (Office Beige) with OS (Office Slate), OG (Office Gray), or MT (Medium Tone). Computer printable labels found on pages E2.4 and E2.5

AWG dimensions represent typical outer cable diameter in inches.

## PAN-POLE™ POWER AND COMMUNICATION POLES

PAN-POLE™ Power and Communication Poles provide industry-leading solutions for cable routing in the open office environment. Available with pre-terminated electrical outlets with divided channel for power and communication applications or as an open channel communication pole.

- Tamper resistant cover
- Bend radius control fitting (above ceiling) as required by TIA/EIA-568-B and 569-B.
- Complete with ceiling and floor mounting hardware

PAN-POLE™ Power and Communication Poles accept NEMA standard 70mm screw-on faceplates or superior PAN-WAY® Snap-On Faceplates.

## PAN-POLE™ Power Pole

B1. Cable Ties

- Dual channel aluminum pole is equipped with pre-terminated electrical outlets and provides channel separation for the installation of communication cabling and modules

B2. Cable Accessories

- UL and CSA rated 600 V
- Available in 11 or 13 foot lengths and supplied with a non-metallic cover
- Electrical outlets are pre-wired

B3. Stainless Steel Ties

Pre-installed components include:

1. Blank non-metallic cover
2. Two 20 A factory wired rectangular outlets with wiring fed through power channel to base of power entry box

C1. Wiring Duct

C2. Surface Raceway

| <b>T70SDB-X</b>   | Standard faceplate bracket. Used to mount NEMA standard 70mm single gang screw-on faceplates. Can be used with T-70, Twin-70, TG-70 raceway and <i>PAN-POLE™</i> Communication Pole. | Gray      | 10             | —              |

‡For other colors replace IW (Off White) with EI (Electric Ivory).

When purchasing power addition kit with 20A outlet, use with *PAN-POLE™* Power Pole, PCPA11R20IW and PCPA13R20IW.

When purchasing power addition it without outlet, rectangular power outlet needs to be purchased separately. Use with *PAN-POLE™* Power Pole, PCPA11R20EI and PCPA13R20EI.

AWG dimensions represent typical outer cable diameter in inches.

## ABRASION PROTECTION

*PANDUIT* abrasion protection products provide an economical and easy way to insulate, protect, bundle and color-code components and cable. A wide variety of sizes and materials are available to meet a broad range of indoor and outdoor applications. To help assure optimum quality, *PANDUIT* abrasion protection products are designed and manufactured to meet applicable quality standards including International, UL, Military, ISO and Aerospace.

- *PAN-WRAP™* Split Harness Wrap features a patented slot pattern to improve flexibility and abrasion protection
- Spiral wrap bundles and protects wire and cable while providing the largest variety of colors, materials, and sizes to meet a variety of needs
- Grommet edging protects wire and cable from damage caused by sharp panel edges
- Heat shrink is available in many different materials and sizes to meet a variety of needs
- Corrugated loom tubing is crush, impact, and abrasion resistant to reduce the risk of damage to wire and cable
- Braided expandable sleeving provides continuous abrasion resistance and lightweight durable protection, with a flexible open weave that will not trap heat or humidity

*PANDUIT* abrasion protection products provide quality at the lowest installed cost. With a continued focus on new product development, *PANDUIT* continues to meet customer needs.

## **PAN-WRAP™ Split Harness Wrap**

B1. Cable Ties

- Patented slot pattern provides improved flexibility and abrasion protection in any application
- Unique wall design provides for easy cable breakouts
- Innovative design maintains uniform bundle protection in dynamic applications
- Large overlap accommodates a wide range of bundle diameters
- Packaged on a reel for easy handling and dispensing of product

## Spiral Wrap

B1. Cable Ties

B2. Cable Accessories

- Harness multiple cables into a single manageable bundle
- Allows breakouts of single/multiple cables
- Provides protection for cables
- Multiple colors allow easy identification of cable bundles
- Installation tool supplied in each package

\*Flame retardant products are manufactured from a material that is rated UL 94V-0.

‡Reel packaging may contain splices. Contact PANDUIT Customer Service for further information.

\*TEFLON or equivalent fluoropolymer PTFE material is used. TEFLON is a registered trademark of E.I. du Pont de Nemours and Company.

A. System Overview

## Part Number System for Grommet Edging

B1. Cable Ties

**GEE**

**36**

**F**

-

**A**

-

**C**

**0**

B2. Cable Accessories

**Type**

**Max. Panel Thickness**

**Material**

**Adhesive**

**Package Size**

**Color Suffix**

GE = Grommet Edging Strips  
 GEE = Slotted Grommet Edging  
 GES = Solid Grommet Edging

36 = .036" thickness  
 62 = .062" thickness  
 99 = .099" thickness  
 144 = .144" thickness  
 189 = .189" thickness

F = Polyethylene  
 N = Nylon 6.6  
 FR = Flame Retardant Polyethylene

A = Adhesive Lined  
 Leave Blank = Non-Adhesive

Q = 25'  
 L = 50'  
 C = 100'

0 = Weather Resistant Black  
 Leave Blank = Natural

B3. Stainless Steel Ties

C1. Wiring Duct

C2. Surface Raceway

C3. Abrasion Protection

## Grommet Edging

- Use product on irregularly shaped and round panel hole
- Provided in .030 inch (.8mm) thick material making it highly flexible

C4. Cable Management

D1. Terminals

D2. Power Connectors

D3. Grounding Connectors

### Corrugated Loom Tubing – Slit

- Provides protection for cables
- Packaged on a reel for easy handling and dispensing of product
- For indoor use only

Reel packaging may contain splices. Contact PANDUIT Customer Service for further information.

A. System Overview

## Braided Expandable Sleeving – Flame Retardant Polyethylene Terephthalate

B1. Cable Ties

- Provides continuous abrasion protection for wires, cables, hoses and tubing
- Highly flexible open weave will not trap heat or humidity
- Rated for use up to 257°F (125°C)
- Allows for use with irregular shapes
- Flammability: Meets UL 224 VW-1

B2. Cable Accessories

B3. Stainless Steel Ties

C1. Wiring Duct

C2. Surface Raceway

C3. Abrasion Protection

C4. Cable Management

D1. Terminals

D2. Power Connectors

D3. Grounding Connectors

E1. Labeling Systems

E2. Labels

E3. Pre-Printed & Write-On Markers

E4. Permanent Identification

E5. Lockout/Tagout & Safety Solutions

### Tooling Head

- Sleeving cutter/end sealer blade – used with popular soldering guns to cut and seal sleeving

| Part Number | Description   | Std. Pkg. Qty. |
|-------------|---|----------------|
| HKBS        | For dual straight shank soldering guns with .500" spacing typical guns: WELLER Straight Shank Model 8200; WEN Model 199 or 100 (Replace tip holding screws with (2) screws included). | 1              |

## Fray Resistant Braided Expandable Sleeving

- Fray-resistant design resists fraying when cut with scissors
- Provides continuous abrasion protection resistance for wires, cables, and tubing
- For indoor use only
- Material: Polyethylene Terephthalate

|                    |   | .50 = 1/2"          |                         |
|                    |   | .75 = 3/4"          |                         |
|                    |   | 1.0 = 1"            |                         |

### Non-Shrink PVC Tubing

- Provides insulation and protection for lead wires, wire harness assemblies, soldered joints, and components in electrical and electronic equipment
- All purpose flexible and non-shrinkable
- Resistant to heat and moisture
- UL Recognized, CSA Certified
- Flammability: Meets UL 224 VW-1
- Voltage rating: 300 V and 600 V
- ASTM D-922 Grade CFR
- MIL-I-631 Type F, Form U, Grade C- Class 1 Category 1
- Material: Polyvinyl chloride (PVC)

## Duct Seal – Sealing Compounds

- Seals irregular openings from air, dust, or water
- Non-hardening sealant that adheres to metal, masonry, wood or plastic
- Provides vibration dampening
- Meets the requirements of UL 514A (paragraph 29.5.1 to 29.5.3) – electrical outlet box cover water seal
- Safe and easy to use, non-corrosive, non-toxic, no asbestos, will not stain or harm hands, and no unpleasant odor.
- Dielectric strength: 200 V/Mil, Min .030 inches thick

| Part Number | Description                                | Std. Pkg. Qty. |
|-------------|--|----------------|
| <b>DS1</b>  | Duct seal (sealing compound) 1 lb. package | 1              |
| <b>DS5</b>  | Duct seal (sealing compound) 5 lb. package | 1              |

## Flammability Tests and Classification

### Abrasion Protection Products Flammability Tests and Classifications

- A number of test procedures have been developed which can be used for the evaluation and comparison of various materials to support combustion
- Review the following classifications to find which category is designed to suit your abrasion and protection applications

### UL 94 Vertical Burning Test

Test samples of material, with dimension  $125 \pm 5\text{mm}$  by  $13.0 \pm 5\text{mm}$  and provided in the minimum and maximum thickness of the intended end use product, are tested in an unconditioned (as manufactured) state and in a conditioned state (7 days at  $168\text{F}^\circ$ ,  $75^\circ\text{C}$ ). The test requires the placement of a precisely controlled flame under a vertically supported specimen for a 10 second period. The flame is removed and the duration of flaming is recorded. If the flame extinguishes, the specimen is immediately subjected to a second 10 second ignition period. Duration of flaming is again recorded. A piece of 100% cotton is placed under the specimen. Also observed and documented is if the sample drips flaming particles that ignite the cotton indicator below.

#### Materials Classification

| Criteria Conditions  | V-0               | V-1                | V-2                |
|--|-------------------|--------------------|--------------------|
| Afterflame time for each individual specimen $t_1$ or $t_2$  | $\leq 10\text{s}$ | $\leq 30\text{s}$  | $\leq 30\text{s}$  |
| Total afterflame time for any condition set ( $t_1$ plus $t_2$ for the 5 specimens)                            | $\leq 50\text{s}$ | $\leq 250\text{s}$ | $\leq 250\text{s}$ |
| Afterflame plus afterglow time for each individual specimen after the second flame application ( $t_2 + t_3$ ) | $\leq 30\text{s}$ | $\leq 60\text{s}$  | $\leq 60\text{s}$  |
| Afterflame or afterglow of any specimen up to the holding clamp  | No                | No                 | No                 |
| Cotton indicator ignited by flaming particles or drops   | No                | No                 | Yes                |

|       |  |
|-------|--|
| $t_1$ | After flame time after first flame application |
| $t_2$ | After flame time after flame application       |
| $t_3$ | After glow time after second flame application |

### MATERIALS CLASSIFIED UL 94 HB

- Specimens shall have a maximum burn rate of  $<1.5$  in./min over 3 inches of thickness of .120 inches to .5 inches
- Specimens shall have a maximum burn rate of  $<30$  in./min over 3 inches for a thickness less than .120 inches

### UL 224 VERTICAL WIRE FLAME TEST

Samples of fully recovered tubing are placed over a length of fine spring steel music wire. The test requires the precise placement of a controlled flame that contacts the heat shrink tubing. The flame is applied in five 15 second intervals with a time period between applications. If the flame extinguishes immediately after the first flame removal, subsequent flame applications are made to the tubing. Duration of specimen flaming is noted. A piece of surgical cotton is placed under the specimen. If a flaming or glowing piece of tubing drips and ignites the cotton, this is also noted.

### MATERIALS CLASSIFIED AS VW-1 SHALL:

- Not flame or glow longer than 60 seconds following any of the five applications of the flame
- Not ignite or damage more than 25% of kraft paper flag that is placed around the top of the tubing
- Not have any specimens which drip flaming particles and ignite the surgical cotton located 9 1/2 inches below the test specimen

## Abrasion Protection Materials Technical Data

|   | Ratings and Approvals  | Physical Properties   |                                |                     |  |                         |                             | Chemical Resistance             |   |                              |                                     |                              |
|---|--|---|--------------------------------|---------------------|--|-------------------------|-----------------------------|---------------------------------|---|------------------------------|-------------------------------------|------------------------------|
|   |  | UL Temperature Index  | Flammability (UL 94)           | Melting Temperature | Abrasion Resistance (Lower number is better) | Specific Gravity (D792) | Minimum Tensile @23°C (psi) | Water Absorption (Max. 24 hrs.) | Organic Solvents  | Alkalies                     | Acids                               | Petro-Chemicals              |
| <b>SPIRAL WRAP</b>  | <b>Natural Polyethylene</b><br>Lowest cost material for indoor use up to 122°C.<br>Natural is available in all sizes.  | -40°F (-40°C) to 122°F (50°C)   | HB                             | 239°F (115°C)       | 22 mg  | .91 – .93               | 1400 (D368)                 | .01%                            | Resistant below 140°F (60°C) except to chlorinated solvents | Resistant                    | Resistant except to oxidizing acids | Some Discoloration           |
|   | <b>Weather Resistant Polyethylene</b><br>This material has the same properties as natural polyethylene, and also has additives which allow it to resist the effects of ultraviolet light and acid rain in an outdoor environment. This product is available only.  | -40°F (-40°C) to 122°F (50°C)   | HB                             | 239°F (115°C)       | 20 mg  | .93 – 1.09              | 2000 (D368)                 | .03%                            | Resistant below 140°F (60°C) except to chlorinated solvents | Resistant                    | Resistant except to oxidizing acids | No Discoloration             |
|   | <b>Fire Resistant Polyethylene</b><br>UL 94-V2 Rating<br>This material is self-extinguishing and passes the UL 94 flame retardant test with V2 rating.   | -40°F (-40°C) to 194°F (90°C)   | V-2                            | 239°F (115°C)       | 27 mg  | 1.00 – 1.30             | 1400 (D368)                 | .02%                            | Resistant below 140°F (60°C) except to chlorinated solvents | Resistant                    | Resistant except to oxidizing acids | Some Discoloration           |
|   | <b>Flame Retardant Polyethylene</b><br>UL 94-V0 Rating. This material is self extinguishing and passes the UL 94 flame retardant test with a V0 rating.  | -4°F (-20°C) to 212°F (100°C)   | V-0                            | 270°F (132°C)       | 22 mg  | 1.23 – 1.37             | 1500 (D368)                 | .02%                            | Resistant except to halogenated hydrocarbons                | Resistant                    | Resistant                           | Resistant Some Discoloration |
|   | <b>Nylon 6.6</b><br>Nylon is strong, durable, self-extinguishing material for indoor use up to 149°F. It offers a combination of lightweight, wide temperature range, and high abrasion resistance. This material is suitable for applications where heavy vibration or stress exists on the wiring or tubing. | -40°F (-40°C) to 149°F (65°C)   | V-2                            | 505°F (263°C)       | 7 mg   | 1.13 – 1.15             | 12,400 (D368)               | 1.2%                            | Resistant except to halogenated hydrocarbons                | Resistant                    | Not recommended                     | Resistant No Discoloration   |
|   | <b>Weather Resistant Nylon</b><br>This material has the same properties as natural Nylon and also has additives which allow it to resist the effects of ultraviolet light in an outdoor environment. This product is available in black only.  | -40°F (-40°C) to 149°F (65°C)   | V-2                            | 505°F (263°C)       | 7 mg   | 1.13 – 1.15             | 12,400 (D368)               | 1.2%                            | Resistant except to halogenated hydrocarbons                | Resistant                    | Not recommended                     | Resistant No Discoloration   |
|   | <b>TEFLON‡</b><br>This material is a non-flammable, fluorocarbon resin material. Suitable for use in any application (including nuclear containment). It is rated up to 356°F. Color: Opaque to Translucent  | -40°F (-40°C) to 500°F (260°C)  | V-0                            | 648°F (342°C)       | 7 mg   | 2.13 – 2.22             | 3000 (D876)                 | .01%                            | Resistant   | Resistant                    | Resistant                           | Resistant No Discoloration   |
|   | <b>Natural Polyethylene</b><br>Lowest cost material for indoor use up to 50°C.<br>Natural is available in all sizes.   | -40°C to 50°C   | HB                             | 115°C               | 22 mg  | .91 – .93               | 1400 (D638)                 | .01%                            | Resistant below 60°C except to chlorinated solvents         | Resistant                    | Resistant except to oxidizing acids | Some Discoloration           |
|   | <b>Flame Retardant Polyethylene</b><br>UL 94-V0 Rating. This material is self extinguishing and passes the UL 94 flame retardant test with a V0 rating.  | -4°F (-20°C) to 212°F (100°C)   | V-0                            | 132°C               | 22 mg  | 1.15                    | 1500 (D876)                 | .02%                            | Resistant except to halogenated hydrocarbons                | Resistant                    | Resistant                           | Resistant Some Discoloration |
|   | <b>SLEEVING</b>  | <b>Polyethylene Terephthalate (PET)</b><br>This material is a thermoplastic polyester material designed for indoor applications. It is rated for use up to 257°F and will tolerate short-term exposure up to 446°F. Colors: Black, White and Gray | -94°F (-70°C) to 257°F (125°C) | HB                  | 500°F (260°C)                                | —                       | 1.39                        | 100,000 (D876)                  | .08%  | Resistant to some solvents   | Resistant to most weak bases        | Resistant                    |
| <b>Flame Ret. Polyethylene Terephthalate (PET)</b><br>This material is a self-extinguishing thermoplastic polyester that can be used indoors. It is also rated for use up to 257°F and will tolerate short term exposure up to 446°F. It is provided with tracers to identify the flame retardant material. |  | -94°F (-70°C) to 257°F (125°C)  | UL 1441 VW-1                   | 469°F               | —  | 1.39                    | 39,295 (D876)               | .08%                            | Resistant to some solvents                                  | Resistant to most weak bases | Resistant                           | Resistant Some Discoloration |

Note: Typical operating temperature ranges are extended based on end use application and specific environment tests.  
‡TEFLON or equivalent fluorocarbon PTFE is used. TEFLON is a registered trademark of E.I. du Pont de Nemours and Company.

A. System Overview

## HSTT Heat Shrink 4 Foot Pieces and Reels

B1. Cable Ties

- Applications include insulating, protecting, and color coding wires and cables
- Mil Spec: AMS-DTL-23053/5 Class 1 (Colors) Class 2 (Clear)

B2. Cable Accessories

- Voltage: 600 V
- Shrink ratio: 2:1
- Flammability: Flame retardant EXCEPT clear
- Material: Black cross-linked Polyolefin
- UL Recognized, CSA Certified

## HSTT Heat Shrink on 25 Foot Reels

- Applications include insulating, protecting, and color coding wires and cables
- Voltage: 600 V
- Shrink ratio: 2:1
- Flammability: Flame retardant EXCEPT clear
- UL Recognized, CSA Certified
- Mil Spec: AMS-DTL-23053/5 Class 1 (Colors) Class 2 (Clear)
- Temperature range: -67°F to 275°F (-55°C to 135°C)
- For dry locations
- Material: Cross-linked Polyolefin

A. System Overview

## Heat Shrink in 6 Inch Pieces; Single Color, Single Diameter

B1. Cable Ties

- Applications include insulating, protecting, and color coding wires and cables
- Voltage: 600 V
- Shrink ratio: 2:1

- Mil Spec: AMS-DTL-23053/5 Class 1 (Colors) Class 2 (Clear)
- Temperature range: -67°F to 275°F (-55°C to 135°C)
- For dry locations
- Material: Cross-linked Polyolefin
- Colors include: Black and Clear

B2. Cable Accessories

- Flammability: Flame retardant EXCEPT clear
- UL Recognized, CSA Certified

B3. Stainless Steel Ties

C1. Wiring Duct

C2. Surface Raceway

C3. Abrasion Protection

C4. Cable Management

## HSTTV Heat Shrink 4 Foot Pieces

B1.  
Cable Ties

- Applications include insulating, protecting, and color coding wires and cables
- Fast shrink time
- Voltage: 600 V
- Shrink ratio: 2:1
- Flammability: Meets UL 224 VW-1
- UL Recognized, CSA Certified
- Mil Spec: AMS-DTL-23053/5 Class 3
- Temperature range: -67°F to 275°F (-55°C to 135°C)
- For dry locations
- Material: Black cross-linked Polyolefin

## HSTTV Heat Shrink on 100 Foot Reels

- Applications include insulating, protecting, and color coding wires and cables
- Fast shrink time
- Voltage: 600 V
- Shrink ratio: 2:1
- Flammability: Meets UL 224 VW-1
- UL Recognized, CSA Certified
- Mil Spec: AMS-DTL-23053/5 Class 3
- Temperature range: -67°F to 275°F (-55°C to 135°C)
- For dry locations
- Material: Cross-linked Polyolefin UV Resistant

## **UL** **SP** HSTTV Heat Shrink on 25 Foot Reels

- Applications include insulating, protecting, and color coding wires and cables
- Fast shrink time
- Voltage: 600 V
- Shrink ratio: 2:1
- Flammability: Meets UL 224 VW-1
- UL Recognized, CSA Certified
- Mil Spec: AMS-DTL-23053/5 Class 3
- Temperature range: -67°F to 275°F (-55°C to 135°C)
- For dry locations
- Material: Black cross-linked Polyolefin

System  
Overview

## HSTTP PVC Heat Shrink

B1.  
Cable Ties

- Applications include insulating, protecting, and color coding wires and cables
- Good resistance to most fuels and oils
- Voltage: 600 V
- Shrink ratio: 2:1

- Flammability: Meets UL 224 VW-1
- UL Recognized, CSA Certified
- Temperature range: -4°F to 221°F (-20°C to 105°C)
- For dry locations
- Material: Black cross-linked Polyvinyl Chloride

## HSTTPN Crystal Clear PVC Heat Shrink

- Low shrink temperature (store below 90° F) to speed installation
- Crystal clear material ensures easy to read labels and splice inspections
- Mil Spec: AMS-DTL-23052/2 Class 2
- Highly flame retardant product manufactured from a material that is rated UL 224 VW-1
- Shrink ratio of 2:1 insulates a wide range of diameters and irregular shapes

## HSTTN Neoprene Heat Shrink

- Applications include insulating, protecting, and color coding wires and cables
- Excellent chemical resistance especially to fuels and oils
- Voltage: 600 V
- Shrink ratio: 2:1
- Mil Spec: AMS-DTL-23053/1 Class 2
- Temperature range: -94°F to 250°F (-70°C to 121°C)
- For dry locations
- Material: Black cross-linked Neoprene

## TEFLON<sup>®</sup> Heat Shrink

B1. Cable Ties

- Applications include insulating, protecting, and color coding wires and cables
- Voltage: 600 V
- Shrink ratio: 2:1
- Mil Spec: AMS-DTL-23053/12 Class 3
- Temperature range: -400°F to 500°F (-240°C to 260°C)
- Color: Opaque
- For dry locations
- Material: Polytetrafluoroethylene (PTFE)
- See page C3.39 for shrink instructions

## UL® CS® HSTTK Kynar\* Heat Shrink 4 Foot Pieces

- Applications include insulating, protecting, and color coding wires and cables
- Excellent chemical and abrasion resistance
- Use in high temperature or solvent rich environment
- Voltage: 600 V
- Shrink ratio: 2:1
- Flammability: Meets UL 224 VW-1
- Mil Spec: AMS-DTL-23053/8
- Temperature range: -67°F to 347°F (-55°C to 175°C)
- For dry locations
- Material: Cross-linked Polyvinylidene Fluoride (PVDF)

## HSTTA Heat Shrink 4 Foot and 6 Inch Pieces

- Applications include insulating, protecting, and color coding wires and cables
- Flexible tubing with an adhesive inner wall which seals and protects components from moisture and corrosion
- Voltage rating: 600 V
- Shrink ratio: 3:1
- Flammability: Outer wall flame retardant
- Mil Spec: AMS-DTL-23053/4 Class 3
- Temperature range: -67°F to 230°F (-55°C to 110°C)
- For damp locations
- Material: Adhesive lined black cross-linked Polyolefin

## HSTTRA Heat Shrink 4 Foot Pieces

- Applications include insulating, protecting, and color coding wires and cables
- Semi-rigid tubing with an adhesive inner wall seals and protects components from moisture and corrosion
- Voltage rating: 600 V
- Shrink ratio: 2.5:1
- Mil Spec: AMS-DTL-23053/4 Class 1
- Temperature range: -67°F to 230°F (-55°C to 110°C)
- For damp locations
- Material: Adhesive lined black cross-linked Polyolefin

## UL® SF® Thick Wall Polyolefin Heat Shrink

- Applications include insulating, protecting, and color coding wires and cables
- Adhesive-lined inner wall seals and protects against moisture
- Thick wall suitable for direct burial according to UL 486D and provides excellent protection
- Voltage rating: UL 486D Listed for 600 V 1 kV 90°C continuous use
- Shrink ratio: 3:1
- Flammability: Flame retardant outer wall meets UL 224 VW-1
- UL Listed (Except HST3.0), CSA Certified
- Mil Spec: AMS-DTL-23053/15
- Temperature range: -85°F to 230°F (-65°C to 110°C)
- For wet locations
- Material: Adhesive lined black cross-linked Polyolefin

## Heat Shrink End Caps

- Applications include insulating, protecting, and color coding wires and cables
- Adhesive lined inner wall seals and provides excellent protection against moisture
- Voltage rating of 600 V
- Shrink ratio: 3:1
- Temperature range: -67°F to 230°F (-55°C to 110°C)
- For wet locations
- Material: Adhesive lined black cross-linked Polyolefin

## Heat Shrink Installation Instructions

### General Instructions

Position heat shrink over the object to be covered. Using a heat gun, soft yellow flame torch, infrared heat source or oven, evenly heat the tubing until it has fully recovered and conforms to the object. Use caution not to char or burn the tubing.

### Special Instructions for HSTTT

TFE Heat Shrink is the most difficult to recover due to its high shrink temperature. TFE shrink tubing must be heated to the gel state 621°F (327°C) to completely recover. This can be recognized when the tubing changes from milky white to clear. Because of the unique characteristics of this material, a controlled temperature oven will achieve the most reliable results – it is difficult to consistently recover this product using a high-temp heat gun or similar heat source. These methods have a tendency to overheat the tube in one area while other areas remain cool.

When recovering onto objects, use a temperature controlled oven set at 660°F – 680°F (349°C – 360°C) for approximately 10 minutes is recommended. It is best to place the product on a fiberglass mat or suspend as opposed to contacting the oven rack. Do NOT heat the product above 700°F (371°C), or degradation damage to the TFE polymer will occur.

### Size Selection for Heat Shrink Tubing

Generally, the largest tube that shrinks down tightly onto an object should be chosen. This allows the heat shrink tubing maximum stress relief and this will yield the longest service life.

#### Example:

A multi-conductor cable needs to be covered with HSTT Type *DRY-SHRINK™* Heat Shrink. The area to be covered has a measured outside diameter of .700" (17.8mm). The two possibilities are HSTT75-48-5 and HSTT100-48-5.

| Part Number  | Expanded I.D.<br>In. (mm) | Recovered I.D.<br>In. (mm) |
|--------------|---------------------------|----------------------------|
| HSTT75-48-5  | .750 (19.0)               | .375 (9.5)                 |
| HSTT100-48-5 | 1.00 (25.4)               | .500 (12.7)                |

The proper choice is HSTT100-48-5 since the tube will recover more than HSTT75-48-5. The HSTT75-48-5 will fit over the .700 inch (17.8mm) outside diameter; however, this is not the proper choice since it is smaller than the HSTT100-48-5. In general, heat shrink should recover at least 10% – 20% to reduce stress and yield the longest service life.

## Recommended Tubing Size for Common Wire Types Based on Location For Insulated Wire, Non-Insulated Wire, and Insulated Wire with Copper Connectors

B1. Cable Ties

### Instructions for Tube Selection:

1) Determine location type.

B2. Cable Accessories

#### LOCATION:

**DRY – IP62:** A location not normally subject to dampness or wetness. A location classified as dry may be temporarily subject to dampness or wetness, as in the case of a building under construction.

B3. Stainless Steel Ties

**DAMP – IP66:** Partially protected locations under canopies, marquees, roofed open porches and like locations, and interior locations subject to moderate degrees of moisture, such as some basements, barns, and cold-storage warehouses.

**WET – IP68:** Installations underground or in concrete slabs or masonry in direct contact with the earth, and locations subject to saturation with water or other liquids, such as vehicle washing areas, and locations exposed to weather and unprotected.

C1. Wiring Duct

2) Match wire size to location type under required application – insulated wire, non-insulated wire, or insulated wire with copper connectors.

3) Read corresponding part number.

C2. Surface Raceway

4) Part numbers with “-Y” are packages containing 6 inch pieces. Part numbers with “-48” are 48 inch pieces.

5) Part numbers shown below are for black heat shrink.

C3. Abrasion Protection

| Wire Size | Insulated Wire |              |             | Uninsulated Wire |              |             | Insulated Wire with Copper Connector |              |             |
|-----------|----------------|--------------|-------------|------------------|--------------|-------------|--------------------------------------|--------------|-------------|
|           | DRY-SHRINK™    | DAMP-SHRINK™ | WET-SHRINK™ | DRY-SHRINK™      | DAMP-SHRINK™ | WET-SHRINK™ | DRY-SHRINK™                          | DAMP-SHRINK™ | WET-SHRINK™ |

Sizing information is based on the following wire types: MTW, THHN, THWN, TFN, THW, TW, TF, RHW, RH, RHH and UL 1015.

THHN is the most common wire type.

## IP (Ingress Protection) as defined by the International Standard IEC 529

The IEC 529 international standard describes a system for classifying the degrees of protection provided by the enclosures of electrical equipment and is a recognized standard around the world. An independent test laboratory has tested *PANDUIT* Heat Shrink Tubing to the IEC 529 standard. The following information exhibits the IP ratings for *PANDUIT* heat shrink tubing and how each of the IP ratings relates to the USA.

The first characteristic numeral indicates the level of protection against the ingress of solid foreign objects.

The second characteristic numeral indicates the level of protection against the ingress of water.

| 1st Characteristic Numeral   |                        |
|--|------------------------|
| Ingress Protection (IP)  | Meaning for Protection |
| Against ingress of solid object  |                        |
| 0  | Non-Protected          |
| 1  | 50mm diameter          |
| 2  | 12.5mm diameter        |
| 3  | 2.5mm diameter         |
| 4  | 1.0mm diameter         |
| 5  | Dust Protected         |
| <i>DRY-SHRINK™</i> , <i>DAMP-SHRINK™</i> and <i>WET-SHRINK™</i> Heat Shrink Tubing | Dust Tight             |

| 2nd Characteristic Numeral             |                          |                        |
|--|--------------------------|------------------------|
| <i>PANDUIT</i> Heat Shrink             | Ingress Protection (IP)  | Meaning for Protection |
|  | Against ingress of water |                        |
|  | 0                        | Non-Protected          |
|  | 1                        | Vertically Dripping    |
| <i>DRY-SHRINK™</i> Heat Shrink Tubing  | 2                        | Dripping (15° tilted)  |
|  | 3                        | Spraying               |
|  | 4                        | Splashing              |
|  | 5                        | Jetting                |
| <i>DAMP-SHRINK™</i> Heat Shrink Tubing | 6                        | Powerful Jetting       |
|  | 7                        | Temporary Immersion    |
| <i>WET-SHRINK™</i> Heat Shrink Tubing  | 8                        | Continuous Immersion   |

|   | Intended Application Location  | Ingress Protection Rating | Description  |
|---|--|---------------------------|--|
|  | <b>DRY</b> locations not normally subject to moisture                        | <b>IP62</b>               | Protected against the ingress of dust but not protected against the ingress of water               |
|  | <b>DAMP</b> locations subjected to moderate degrees of water and moisture    | <b>IP66</b>               | Protected against the ingress of dust and protected against the ingress of power jet of water      |
|  | <b>WET</b> locations are defined as underground burial or immersion in water | <b>IP68</b>               | Protected against the ingress of dust and protected against the ingress of water to a depth of 10m |

*DRY-SHRINK™* Heat Shrink has been tested in accordance with EN 60529 paragraph 13.4 thereby providing *PANDUIT DRY-SHRINK™* Heat Shrink with an ingress protection rating of IP62.

*DAMP-SHRINK™* Heat Shrink has been tested in accordance with EN 60529 paragraph 13.4 and with paragraph 14.2.6 thereby providing *PANDUIT® DAMP-SHRINK™* with an ingress protection rating of IP66.

*WET-SHRINK™* Heat Shrink has been tested in accordance with EN 60529 paragraph 13.4, paragraph 14.2.6 and with paragraph 14.2.7 thereby providing *WET-SHRINK™* Heat Shrink with an ingress protection rating of IP68. *PANDUIT® WET-SHRINK™* Heat Shrink has passed EN 60529 paragraph 14.2.7 at depth of 10m.

### Technical Data

#### General Information

| Product Type  | Typical Applications   | Specific Gravity                           | Flammability  | Water Absorption       | Dielectric Strength   |
|---------------|--|--|---|------------------------|---|
| <b>HSTT</b>   | Economical and easy way to insulate, protect, harness and identify electrical and electronic components in a wide variety of applications. Black is U.V. Resistant.  | Class 1, 1.35<br>Class 2, 1.0<br>ASTM D792 | Class 1 Self Extinguishing<br>Class 2 N/A<br>ASTM D2671 Procedure B | .5% MAX.<br>ASTM D570  | 500 V/MIL.<br>(19.7 Kv/mm) min.<br>ASTM D2671   |
| <b>HSTTV</b>  | Use where UL recognition with VW-1 rating is required. Use where the wire component cannot tolerate higher shrink temperatures, reduces application time to insulate, protect, identify, etc. Black is U.V. Resistant.                     | 1.50<br>ASTM D792                          | VW-1 per UL 224   | .5% MAX.<br>ASTM D570  | 500 V/MIL.<br>(19.7 Kv/mm) min.<br>ASTM D2671   |
| <b>HSTTP</b>  | Ripple free conformance around sharp bends as in appliance handles and bus bars. Good cut through and solder-iron resistance. Black is U.V. Resistant.   | 1.35<br>MAX.                               | VW-1 per UL 224   | 1.0% MAX.<br>ASTM D570 | 400 V/MIL.<br>(15.8 Kv/mm) min.<br>ASTM D2671   |
| <b>HSTTPN</b> | Crystal clear product that is excellent for protecting wire and cable markers and continuous inspection of splices   | N/A  | UL 224<br>VW-1  | 1.0% MAX.<br>ASTM D570 | 400 V/MIL.<br>(15.8 Kv/mm) min.<br>ASTM D2671   |
| <b>HSTTN</b>  | Insulation and abrasion resistance, extensive military uses on vehicles and ship-board. Excellent chemical resistance especially to fuels and oils. Black is U.V. Resistant.   | 1.30<br>ASTM D792                          | Self Extinguishing<br>ASTM D876                                     | 1.0% MAX.<br>ASTM D570 | 300 V/MIL.<br>(11.8 Kv/mm) min.<br>ASTM D2671   |
| <b>HSTTT</b>  | High insulation and abrasion resistance. High temperature, strain relief, resists corrosive atmosphere, self lubrication and non-wetting. Can be used with fiber optics and as a strain relief for high density connectors. U.V. Resistant | 2.2 MAX.<br>ASTM D792                      | VW-1 per UL 224   | .01% MAX.<br>ASTM D570 | 800 V/MIL.<br>(31.5 Kv/mm) min.<br>ASTM D2671   |
| <b>HSTTK</b>  | Protection and strain relief for wires or connectors in a high temperature or solvent rich environment. Insulation of heater leads.  | 1.8 MAX.<br>ASTM D792                      | VW-1 per UL 224   | .5% MAX.<br>ASTM D570  | Size to (12.7mm)<br>800 V/MIL.<br>(31.5 Kv/mm) min<br>Over (12.7mm)<br>600 V/MIL.<br>(23.6 Kv/mm) min<br>ASTM D2671 |
| <b>HSTTVA</b> | Seals and protects components from moisture and corrosion. Use where a flexible tubing is needed. ## CABLE MANAGEMENT

PANDUIT offers a complete line of cable management products and accessories to route and secure cable. These products are an essential part of a clean, professional installation, which help improve quality and increase system performance.

PANDUIT solutions provide the options necessary to handle the most demanding installations while providing the flexibility to facilitate system upgrades now and in the future.

- Maintains bend radius control and cable performance while bundling and securing cable to prevent snags and stress from over bending
- Provides attractive installations and allows for easier moves, adds, and changes while reducing stress on cable
- Organizes cable in a variety of applications where depth is critical or space is limited

F. Index

- Air tight fabric minimizes bypass of air through cutouts in the raised floor to decrease energy costs in hot aisle/cold aisle data center designs
- **ULTRA-CINCH™** Tie closes top of fabric to prevent air from escaping around cable bundles
- Electrostatic dissipative material provides a pathway to ground reducing the chance of damaging network equipment with electric shock
- Vertical **TAK-TY®** Hook & Loop Cable Tie closure system allows for installation on existing cable bundles
- Horizontal **TAK-TY®** Hook & Loop Cable Tie closure system allows two or more bundles to be separated in existing or new installations

- Flexible polycarbonate outer ring houses fabric to allow user to secure product to raised floor tile; slit allows outer ring to flex so entire cable bundle can be inserted to allow for retrofit installations even when vertical cable managers are already in place
- Low profile polycarbonate outer ring extends 7/16" above top of raised floor tile to allow compatibility with vertical cable managers.
- Self-tapping #10 screws (included) allow a secure fastening method to top of raised floor tile that also provides a pathway to ground
- Color: Black polycarbonate outer ring with navy blue fabric
- Manufactured from flame retardant material

## J-PRO™ Cable Support System

B1. Cable Ties

• Patent pending design provides complete horizontal and vertical 1 inch bend radius control that helps prevent degradation of cable performance

B2. Cable Accessories

• UL 2043 and CAN/ULC S102.2 approved and suitable for use in air handling spaces

B3. Stainless Steel Ties

• Pre-rieveted assemblies allow for attachment to walls, ceilings, beams, threaded rods, drop wires and underfloor supports to meet requirements of a variety of applications

• Wide cable support base prevents pinch points that could cause damage to cables

• Cable tie channel allows user to easily install 3/4" *TAK-TY*® Cable Ties to retain cable bundle

• Durable non-metallic J Hook materials provide the ability to manage and support a large number of cables

\*Suitable for use in air handling spaces in accordance with Sec. 300-22(c) and (d) of the National Electrical Code. JP4 family of parts suitable for use in single unit configurations. Listed in accordance with CAN/ULC S102.2 when mounted as single units or in pairs. Minimum spacing of 4' (1220mm) required between mount points. (Flame spread rating = 0, Smoke developed classification = 30)

‡Standard product is black in color. For red replace - L20 with - L2 in part number suffix.

‡‡Standard product is black in color. For red replace - X20 with - X2, for blue replace - X20 with - X6 in part number suffix.

\*Suitable for use in air handling spaces in accordance with Sec. 300-22(c) and (d) of the National Electrical Code. JP4 family of parts suitable for use in single unit configurations. Listed in accordance with CAN/ULC S102.2 when mounted as single units or in pairs. Minimum spacing of 4" (1220mm) required between mount points. (Flame spread rating = 0, Smoke developed classification = 30)

‡Standard product is black in color. For red replace – L20 with – L2 in part number suffix.

‡‡Standard product is black in color. For red replace – X20 with – X2, for blue replace – X20 with – X6 in part number suffix.

\*Suitable for use in air handling spaces in accordance with Sec. 300-22(c) and (d) of the National Electrical Code. JP4 family of parts suitable for use in single unit configurations. Listed in accordance with CAN/ULC S102.2 when mounted as single units or in pairs. Minimum spacing of 4' (1220mm) required between mount points. (Flame spread rating = 0, Smoke developed classification = 30)

‡Standard product is black in color. For red replace – L20 with – L2 in part number suffix.

‡‡Standard product is black in color. For red replace – X20 with – X2, for blue replace – X20 with – X6 in part number suffix.

## J-MOD® Cable Support System

- Modular design allows flexibility to assemble system in multiple configurations
- Unique chaining bracket design creates a strong metal backbone and allows expansion of the system without disturbance of an existing installation

- Brackets allow for attachment to ceilings, beams, threaded rods and drop wires to meet requirements of a variety of applications
- Manufactured from materials that meet UL 2043 and are suitable for use in air handling spaces
- Complete horizontal and vertical 1" bend radius control
- Cables do not come in contact with metal

Overview

## Conduit Waterfall

B1.  
Cable Ties

- Helps prevent pinch points and over bending that could cause damage to cable
- Suitable for use in air handling spaces per UL 2043
- UL listed per UL 1565

- Unique patent pending design allows for use in both new and retrofit applications
- Allows user to install 3/4" *TAK-TY*® Cable Ties to provide a method to retain and manage the cable bundle
- Material: Black Glass-Filled PBT meets UL 94V-0 specifications

B2.  
Cable  
Accessories

- Able to manage and support a large capacity of cables
- Easy and fast to install reducing labor cost

B3.  
Stainless  
Steel Ties

| Part Number   | Part Description   | Std. Pkg. Qty. | Std. Ctn. Qty. |
|---------------|--|----------------|----------------|
| <b>CWF400</b> | Provides bend radius control for cables entering/exiting 4" EMT conduit. Secure to conduit without tools utilizing integral thumb screw and captive nut. | 1              | 10             |

## Waterfall Accessories

C4.  
Cable  
Management

- Patented bend radius control product
- Product available as a kit (includes base, two wings, and cable ties) or purchased separately
- Easy to install waterfall kit maintains bend radius control in both vertical and horizontal directions to provide a TIA/EIA-568-B compliant installation

- Base attaches to either the rung or stringer on most standard ladder racks for a variety of installations/configurations
- Modular components allow user to custom configure each location where cable management is required
- Material: Black Glass-Filled Nylon 6.6 meets UL 94V-0 specifications

## Double Waterfall Accessory

- Double waterfall base attaches to the rung on most standard ladder racks to allow bend radius control for cables coming from either direction
- UL 94V-0 Rated Material
- Easy to install double waterfall base maintains bend radius control in a vertical direction to provide a TIA/EIA-568-B compliant installation

| Part Number | Part Description   | Color | Std. Pkg. Qty. | Std. Ctn. Qty. |
|-------------|--|-------|----------------|----------------|
| CMW2B       | Cable management double waterfall base. Used to maintain 1.75" bend radius control vertically when transferring cable off either side of ladder rack rung. Mounts to ladder rack rung with standard cross section cable ties (included). | Black | 1              | 10             |

## Stackable Cable Rack Spacers

- Patented ladder rack accessories
- Separate and support cable and prevent pinch points between the bottom row of cable and the rung as a result of the weight of multiple cable layers applied on top of each other
- Mount to ladder rack with standard cross section cable ties
- Maximize rack space by stacking products for maximum cable capacity
- Provide an alternative to lacing cord by allowing user to secure cable to spacer to prevent movement of cable
- Color: Black

## Vertical D-Rings **PATENTED**

C4. Cable Management

- Patented cable manager ring
- Standard EIA hole spacing allows product to be mounted to any standard rack
- Flexible material allows arm to rotate so entire cable bundle can be inserted and removed
- 1/4" mounting holes allow for a variety of screws to secure the D-ring to a surface
- Material: Black Polycarbonate

## Flat PAN-POST™ Standoffs

- Standard EIA hole spacing allows product to be mounted with user supplied screws up to 1/4" diameter
- Organize cables in standard cabinets and racks
- Mounting method: 1/4" (M6) screw
- Use where space is limited
- For indoor use only

| Part Number    | Part Description  | Std. Pkg. Qty. | Std. Ctn. Qty. |

## PAN-TERM® TERMINALS

PANDUIT® PAN-TERM® Terminals are designed and manufactured for fast assembly, and reliable performance. PANDUIT provides an extensive line of tooling designed specifically to provide optimum performance. As the demand for loose piece terminals increases, it becomes essential to provide a complete system for termination products.

- Funnel entry available on vinyl and nylon insulated terminals and disconnects, speeds insertion, and minimizes turned back wire strands
- Made of electrolytic copper to provide an optimum combination of crimp forming and high conductivity properties to provide superior terminations
- Offered in various types including rings, forks, flanged forks, locking forks and short locking forks
- Available in sizes from #26 – 2 AWG and stud hole diameters from #2 – 1/2"; non-insulated tubular terminals sizes from #8 – 250 kcmil
- Applicable sizes are UL Listed and CSA Certified, RoHS compliant, ABS (American Bureau of Shipping) Approved, Class IE Nuclear Rated, DFARS 252.225-7014 Compliant and meet Military Specifications MS25036 and MS20659 as noted
- Wide assortment of manual, controlled cycle, battery operated hydraulic and pneumatic crimping tools for reliable connections at the lowest installed cost

PANDUIT continually provides new designs to meet the application challenges encountered by our customers. PANDUIT offers a wide assortment of PAN-TERM® termination products to meet customer needs at the lowest installed cost.

## Features and Benefits – PAN-TERM® Terminals

B1.  
Cable Ties

All PANDUIT terminals feature high quality materials made with electrolytic copper for high conductivity and are tin-plated for corrosion resistance.

B2.  
Cable  
Accessories

### Non-Insulated Terminals Type P

Maximum recommended operating temperature 302°F (150°C)

Product markings provide easy identification of wire size

Extended barrel length assures a good quality crimp and makes crimping easier

Internal barrel serrations assure good wire contact and maximum tensile strength

Brazed seam assures crimp reliability

Internally beveled barrel for quick easy wire insertion

UL and CSA rated up to 2000 V per UL 486A.  
Nickel plated terminals rated up to 650°F (343°C) maximum operating temperature.

### Nylon Insulated Terminals with Insulation Grip Sleeve Type PN or PNF

Internal barrel serrations assure good wire contact and maximum tensile strength

Insulation grip sleeve provides a superior insulation crimp for high vibration and high strain relief applications

Funnel entry for faster insertion and lower installed cost

Maximum insulation temperature 221°F (105°C)

Sleeved barrel assures crimp reliability

Color coded insulation identifies wire range

UL and CSA rated up to 600 V per UL 486.  
Flammability – UL 94V-2/HB.  
Proprietary blend of UL 94V-2 and UL 94HB flammability rated materials.

D1.  
Terminals

### Vinyl Insulated Terminals With Insulation Support Type PV

Internal barrel serrations assure good wire contact and maximum tensile strength

Insulation crimp provides insulation support to protect electrical crimp

Funnel entry for faster insertion and lower installed cost

Maximum insulation temperature 221°F (105°C)

Brazed seam assures crimp reliability

Color coded insulation identifies wire range

UL and CSA rated up to 600 V per UL 486.  
Flammability – UL 94V-0.

### Non-Insulated Seamless Tubular Terminals Type S

Internally beveled barrel for quick easy wire insertion

Seamless tubular barrel provides consistent, high performance, quality crimps

Maximum recommended operating temperature 302°F (150°C)

Inspection hole allows visual inspection for proper wire insertion

Product markings provide easy identification of wire sizes

Double thickness provides a strong ring tongue

UL and CSA rated up to 2000 V per UL 486A.

## Ring Terminal, Nylon Insulated

### Type PN-R

- Ring tongue design assures a secure connection in high vibration applications
- Metal insulation grip sleeve crimps to wire insulation, providing protection to the crimp joint during high vibration applications
- Internal barrel serrations assure good wire contact and maximum tensile strength

- UL Flammability UL 94V-2/HB, maximum insulation temperature 221°F (105°C)
- UL and CSA rated up to 600 V per UL 486

\*Wire sizes #26 – 22 AWG, are not UL Listed or CSA Certified.

\*\*To order in bulk, replace -C in the part number with -M for a bulk package of 1000 and replace -L with -D for a bulk package of 500.

^For military specification cross reference see page D1.95

‡UL and CSA approved tooling/product combinations. For crimping tool information, see pages D1.83, D1.84, D1.86 and D1.88.

## Ring Terminal, Nylon Insulated – Expanded Insulation

### Type PN-RX

- Expanded wire entry designed to accommodate wire with a larger insulation thickness
- Ring tongue design assures a secure connection in high vibration applications
- Metal insulation grip sleeve crimps to wire insulation, providing protection to the crimp joint during high vibration applications
- Internal barrel serrations assure good wire contact and maximum tensile strength
- UL Flammability UL 94V-2/HB, maximum insulation temperature 221°F (105°C)
- UL and CSA rated up to 600 V per UL 486

**UL LISTED** **SP CERTIFIED** **Multiple Stud Terminal, Nylon Insulated**

**Type PN-610R**

- Teardrop shaped mounting hole of multiple stud terminals permits use with #6, #8, or #10 size studs
- Ring tongue design assures a secure connection in high vibration applications
- Metal insulation grip sleeve crimps to wire insulation, providing protection to the crimp joint during high vibration applications
- Internal barrel serrations assure good wire contact and maximum tensile strength
- UL Flammability UL 94V-2/HB, maximum insulation temperature 221°F (105°C)
- UL and CSA rated up to 600 V per UL 486

## Ring Terminal, Vinyl Insulated – Funnel Entry

### Type PV-R

- Insulation support helps to prevent wire damage in bending applications
- Ring tongue design assures a secure connection in high vibration applications
- Brazed seam protects terminal barrel from splitting during the crimp process
- UL Flammability UL 94V-0, maximum insulation temperature 221°F (105°C)
- Internal barrel serrations assure good wire contact and maximum tensile strength
- UL and CSA rated up to 600 V per UL 486

\*Wire sizes #26 – 22 AWG, are not UL Listed or CSA Certified.

\*\*To order in bulk, replace -C or -CY in the part number with -M or -MY for a bulk package of 1000 and replace -L with -D for a bulk package of 500.

‡UL and CSA approved tooling/product combinations. For crimping tool information, see pages D1.83, D1.84, D1.86 and D1.88.

## Ring Terminal, Vinyl Expanded Insulation

### Type PV-RX

- Expanded wire entry designed to accommodate wire with a larger insulation thickness
- Ring tongue design assures a secure connection in high vibration applications
- Insulation support helps to prevent wire damage in bending applications
- Brazed seam protects terminal barrel from splitting during the crimp process
- UL Flammability UL 94V-0, maximum insulation temperature 221°F (105°C)
- Internal barrel serrations assure good wire contact and maximum tensile strength
- UL and CSA rated up to 600 V per UL 486

## Multiple Stud Terminal, Vinyl Insulated – Funnel Entry

### Type PV-610R

- Teardrop shaped mounting hole of multiple stud terminals permits use with #6, #8, or #10 size studs
- Ring tongue design assures a secure connection in high vibration applications
- Insulation support helps to prevent wire damage in bending applications
- Brazed seam protects terminal barrel from splitting during the crimp process
- UL Flammability UL 94V-0, maximum insulation temperature 221°F (105°C)
- Internal barrel serrations assure good wire contact and maximum tensile strength
- UL and CSA rated up to 600 V per UL 486

## Ring Terminal, KYNAR® Insulated

### Type PK-R

- For nuclear containment areas and high temperature to 300°F (150°C) applications
- Color code: natural with appropriate color stripe to identify wire range
- Ring tongue design assures a secure connection in high vibration applications
- Classified as Class 1E in accordance with IEEE 323-2003
- Metal insulation grip sleeve crimps to wire insulation, providing protection to the crimp joint during high vibration applications

‡UL approved tooling/product combinations. For tooling information, see pages D1.83, D1.84, D1.86 and D1.88.

**UL LISTED SF CERTIFIED Heat Shrink, Ring Terminal**

**Type PH-R**

- Heat shrink polyolefin sleeve with hot melt adhesive protects against moisture
- Heat shrink sleeving forms a protective barrier to provide environmentally sealed terminations ideal for high moisture applications
- Ring tongue design assures a secure connection in high vibration applications
- Brazed seam protects terminal barrel from splitting during the crimp process
- Heat shrink installation is completed with a standard heat gun
- Minimum continuous operating temperature -65°F (-55°C)
- Maximum continuous operation temperature 230°F (110°C)
- Shrink temperature 250°F (120°C)

For crimping tool information, see page D1.85.

**UL LISTED SF CERTIFIED Ring Terminal, Heavy Duty, Nylon Insulated**

**Type PN-HDR**

- Manufactured from stock 56% thicker than a standard #16 – 14 AWG terminal for use in heavy-duty applications
- Insulation housing is marked with "HDR" to signify heavy-duty ring
- Metal insulation grip sleeve crimps to wire insulation, providing protection to the crimp joint during high vibration applications
- Internal barrel serrations assure good wire contact and maximum tensile strength
- UL Flammability UL 94V-2/HB, maximum insulation temperature 221°F (105°C)
- UL and CSA rated up to 600 V per UL 486

## Ring Terminal, Heavy Duty, Vinyl Insulated – Funnel Entry

### Type PV-HDR

- Manufactured from stock 56% thicker than a standard #16 – 14 AWG terminal for use in heavy-duty applications
- Insulation housing is marked with “HDR” to signify heavy-duty ring
- Insulation support helps to prevent wire damage in bending applications
- Brazed seam protects terminal barrel from splitting during the crimp process
- UL Flammability UL 94V-0, maximum insulation temperature 221°F (105°C)
- Internal barrel serrations assure good wire contact and maximum tensile strength
- UL and CSA rated up to 600 V per UL 486

## Ring Terminal, Large Wire, Vinyl Expanded Insulation

### Type PV-RX

- Expanded wire entry designed to accommodate wire with a larger insulation thickness
- Insulation support helps to prevent wire damage in bending applications
- Brazed seam protects terminal barrel from splitting during the crimp process
- UL Flammability UL 94V-0, maximum insulation temperature 221°F (105°C)
- Internal barrel serrations assure good wire contact and maximum tensile strength
- UL rated up to 600 V per UL 486

\*\*To order in bulk, replace -QY, -E, or -XY in the part number with -T or -TY for a bulk package of 200.  
‡UL approved tooling/product combinations. For crimping tool information, see pages D1.87 and D3.37.

**UL LISTED** **CSA CERTIFIED** **Ring Terminal, Non-Insulated**

**Type P-R**

- Ring tongue design assures a secure connection in high vibration applications
- Internal barrel serrations assure good wire contact and maximum tensile strength
- Brazed seam protects terminal barrel from splitting during the crimp process

- Barrel of terminal internally beveled to provide quick and easy wire insertion
- UL and CSA rated up to 2000 V per UL 486
- Maximum recommended operating temperature 302°F (150°C)

## Multiple Stud Terminal, Non-Insulated

B1. Cable Ties

### Type P-610R

- Teardrop shaped mounting hole of multiple stud terminals permits use with #6, #8, or #10 size studs
- UL and CSA rated up to 2000 V per UL 486
- Maximum recommended operating temperature 302°F (150°C)
- Internal barrel serrations assure good wire contact and maximum tensile strength
- Brazed seam protects terminal barrel from splitting during the crimp process
- Barrel of terminal internally beveled to provide quick and easy wire insertion
- Internal barrel serrations assure good wire contact and maximum tensile strength
- Brazed seam protects terminal barrel from splitting during the crimp process
- UL and CSA rated up to 2000 V per UL 486A
- Maximum recommended operating temperature 302°F (150°C)

## UL LISTED CERTIFIED Ring Terminal, Heavy Duty Non-Insulated

### Type P-HDR

- Manufactured from stock 56% thicker than a standard #16 – 14 AWG terminal for use in heavy-duty applications
- Internal barrel serrations assure good wire contact and maximum tensile strength
- Brazed seam protects terminal barrel from splitting during the crimp process
- Barrel of terminal internally beveled to provide quick and easy wire insertion
- UL and CSA rated up to 2000 V per UL 486
- Maximum recommended operating temperature 302°F (150°C)

| Part Number | Wire Range  | Stock Thickness | Stud Size | Figure Dimensions (In.) |     |     | Recommended Installation Tool      | Std. Pkg. Qty.** | Std. Ctn. Qty. |

## UL LISTED CERTIFIED Ring Terminal, Large Wire Non-Insulated

### Type P-R

- Designed for use with #8 – 2 AWG copper wire
- Ring tongue design assures a secure connection in high vibration applications
- Internal barrel serrations assure good wire contact and maximum tensile strength
- Brazed seam protects terminal barrel from splitting during the crimp process
- Barrel of terminal internally beveled to provide quick and easy wire insertion
- Maximum recommended operating temperature 302°F (150°C)

## Tubular Ring Terminal, Non-Insulated

### Type S-R

- Seamless tubular barrel provides a consistent high performance quality crimp
- Round double thick tongue for reliable power applications
- Barrel of terminal internally beveled to provide quick and easy wire insertion
- Inspection window allows visual inspection of proper wire insertion
- UL and CSA rated up to 2000 V per UL 486A
- Maximum recommended operating temperature 302°F (150°C)

**UL LISTED SF CERTIFIED Fork Terminal, Nylon Insulated**

**Type PN-F**

- Fork design provides for fast and easy installation, without the need to remove fastener
- Metal insulation grip sleeve crimps to wire insulation, providing protection to the crimp joint during high vibration applications
- Internal barrel serrations assure good wire contact and maximum tensile strength
- UL Flammability UL 94V-2/HB, maximum insulation temperature 221°F (105°C)
- UL and CSA rated up to 600 V per UL 486

## Fork Terminal, Vinyl Insulated – Funnel Entry

### Type PV-F

- Fork design provides for fast and easy installation, without the need to remove fastener
- Insulation support helps to prevent wire damage in bending applications
- Brazed seam protects terminal barrel from splitting during the crimp process
- UL Flammability UL 94V-0, maximum insulation temperature 221°F (105°C)
- Internal barrel serrations assure good wire contact and maximum tensile strength
- UL and CSA rated up to 600 V per UL 486

## Fork Terminal, Vinyl Insulated – Expanded Insulation

### Type PV-FX

- Expanded wire entry designed to accommodate wire with a larger insulation thickness
- Fork design provides for fast and easy installation, without the need to remove fastener
- Insulation support helps to prevent wire damage in bending applications
- Brazed seam protects terminal barrel from splitting during the crimp process
- UL Flammability UL 94V-0, maximum insulation temperature 221°F (105°C)
- Internal barrel serrations assure good wire contact and maximum tensile strength
- UL and CSA rated up to 600 V per UL 486

\*Not UL Listed or CSA Certified.

\*\*To order in bulk, replace -C in the part number with -M for a bulk package of 1000 and replace -L with -D for a bulk package of 500.

‡UL and CSA approved tooling/product combinations. For crimping tool information, see pages D1.83, D1.84, D1.86 and D1.88.

## Locking Fork Terminal, Nylon Insulated – Funnel Entry

### Type PNF-LF

- Locks in place for secure connection
- Fork design provides for fast and easy installation, without the need to remove fastener
- Metal insulation grip sleeve crimps to wire insulation, providing protection to the crimp joint during high vibration applications

- Internal barrel serrations assure good wire contact and maximum tensile strength
- UL Flammability UL 94V-2/HB, maximum insulation temperature 221°F (105°C)
- UL and CSA rated up to 600 V per UL 486
