Available in embossey tape-and-reel auto-insertable format

- 7. Wide application range Operating frequency from DC to 6GHz.
- 8. Prevention of flux float-off Switch structure prevents flux float-off.
- **9. Self-alignment** The eccentricity for plug mating is ±0.5mm.

Application

* Wireless communication

- (Bluetooth, IEEE 802.11)
- * Machines

(Portable terminal, notebook PC, ETC, POS terminal, GPS terminal PDA, etc.)

* Also suitable for other high-frequency machines.

The ultra-small MS-147 coaxial switch series was developed for the portable terminal interface and for inspection of microwave boards (substrates) (DC - 6GHz) used at high frequencies.

To respond to the development of portable terminal technologies and popularization of high-frequency applications – up to 6GHz – this switch features low loss, low profile, and light weight.

The switch circuit is designed so that the NC terminal is connected to the C terminal without a plug mated. Mating with a plug opens this connection.

Vertical mounting structure allows the switch to be placed near the antenna of the portable terminal and used to inspect output and switch to an external antenna.

Precautions

1. Compatible with the following plugs.

MS-147-C(LP)-1	: Plug harness type
	(Effective mating length: 0.87mm min.)
MS-147-HRMJ-1	: SMA conversion adapter
	(Effective mating length: 0.87mm min.)

- 2. Not washable.
- 3. Design the mounting holes with sufficient clearance to protect the switch from being subjected to excessive force should the board be dropped.
- 4. For RF interface application for portable terminals, cover the plug entry with a rubber cap to keep dust out when no plug is inserted.
- 5. Be sure to fully insert the plug until it contacts part P.
