Single-circuit

SIN TERMINAL

Board-in Crimp style terminals

It is time consuming to directly solder the many wires that are required on densely packed printed circuit boards. The SIN terminal is crimped to a wire, inserted into a hole in a printed circuit board, then soldered. Solderability is enhanced because solder does not enter the wire, thus ensuring a safe and secure connection. This terminal is ideal for permanent connection of jumper wires onto a printed circuit board or for connection to external circuits.

Features

- Compliant board retention feature insures secure mounting before and during solderring.
- Wires can be machine secured to terminals
- Strain relief minimizes wires.

Specifications

- Current rating: Depends on applicable wires
- Temperature range: -25°C to +85°C
(including temperature rise in applying electrical current)
- Applicable wire: AWG #30 to #12
- Applicable PC board thickness: 1.6mm(.063")
- * Contact JST for details.

Standards

 Recognized E60389

 Certified LR20812

Material and Finish

Brass, copper-undercoated, tin-plated

- Note:
1. The SIN-01T-1.8N terminal requires less force for insertion into a PC board.
 2. * marked terminals are for the use of larger wires (Wire conductors are to be soldered). Contact JST for the details of regarding specifications.
 3. Hole dimensions may differ according to the kind of PC board and piercing method.
