

## MOI-2000 CMOS Clock Oscillator

### General Description

The MOI-2000 clock oscillator is a CMOS integrated circuit that can replace ceramic resonators or crystal oscillators in microcontroller based systems that do not require precise accuracy. The patented temperature compensated oscillator can operate at  $\pm 0.5\%$  total frequency accuracy over the temperature and voltage range without using ceramic resonators, quartz crystals or other external components for frequency determination.

### Features

- No external frequency reference required
- $\pm 0.5\%$  total frequency tolerance over all conditions
- Fast and reliable oscillation startup
- Very low current consumption
- CMOS compatible square-wave output
- Shock and vibration resistant to 80kG
- Die size is 1.4mm x 1.7mm
- Available bare chip for hybrid and Chip on Board (COB)
- Industrial and automotive temperature ranges
