Applications

Three phase rectifier with power factor correction, set up as follows:

- input from three phase mains
  - wide range of input voltage
  - mains currents approximately sinusoidal in phase with mains voltage
  - topology permits to control overcurrent such as in case of input voltage peaks
- output
  - direct current link
  - buck type converter - reduced output voltage
  - possibility to supply boost converter, inverter etc.
- required components
  - one power semiconductor module per phase
  - one inductor and one capacitor per phase on mains side
  - output inductor, depending on supplied circuit
