## 20A, 600V Ultrafast Rectifier

The FFPF20UP60DN is a ultrafast rectifier with soft recovery characteristics. It is silicon nitride passivated ion-implanted epitaxial planar construction.

This device is intended for use as freewheeling of boost diode in switching power supplies and other power switching applications. Its low stored charge and ultrafast soft recovery with soft recovery characteristics minimize ringing and electrical noise in many power switching, thus reducing power loss in the switching transistors.
