- ① Repetitive Rating: Pulse width limited by maximum junction temperature
- ② Repetitive avalanche causes additional power losses that can be calculated as $P_{AV} = E_{AR} \cdot f$
- ③ Starting $T_j = +25^\circ C$, $L = 33.23mH$, $R_G = 25\Omega$, Peak $I_L = 11A$
- ④ Pulse Test: Pulse width < 380 μs , Duty Cycle < 2%

- ⑤ See MIL-STD-750 Method 3471
- ⑥ E_{on} includes diode reverse recovery. See figures 18, 20.
- ⑦ We do not recommend using this CoolMOS™ product in topologies that have free wheeling load current conducted in the body diode that is hard commutated. The current commutation is very "snappy", resulting in high di/dt at the completion of commutation, and the likelihood of severe over-voltage transients due to the resulting high dv/dt.
