

SD57060-01

RF power transistor
the LdmoST family

Features

- Excellent thermal stability
- Common source configuration
- $P_{OUT} = 60W$ with 13dB gain @ 945MHz
- BeO free package
- In compliance with the 2002/95/EC european directive

Description

The SD57060-01 is a common source N-channel enhancement-mode lateral Field-Effect RF power transistor designed for broadband commercial and industrial applications at frequencies up to 1.0GHz. The SD57060-01 is designed for high gain and broadband performance operating in common source mode at 28V. It is ideal for base station applications requiring high linearity.
