Fan with switching driving circuit designed for rpm measurement:  
 These fan motors have three lead wires:( +:Red,-:Black,output signal for 3rd wire:Yellow)

- M Type
  - ◆Low voltage start-up
  - ◆3rd wire square wave signal was amplified by a transistor (open collector type)

**Notes**

1. SUNON will not guarantee the products if the application conditions exceed those set out in this specification.
2. A written request should be submitted to SUNON prior to acceptance if deviation from this specification is required.
3. Caution should be exercised when handling the fan. Damages may be resulted when apply pressure to the impeller or hold the fan by the lead wires.
4. No guarantee on the products against the safety problem or failure caused by powder dust, drop of water or insect.
5. This specification sheet precedes all other information and should be used as the principal reference for the product to which it refers.
6. To satisfy the SUNON Management Information System, please indicate SPEC. NO. on every order.
7. It is important that the correct polarity is established before connecting the fan to the electrical supply. Black (0V) , Red(+V). If cautions is not taken, immediate damage may occur on fans that do not have polarity protection.
8. SUNON fans are not suitable to be used in an environment that contains aggressive or corrosive fluids.
9. Always ensure that fans are stored according to the storage temperatures specified. Do not store in an environment with a high humidity level. If the fans were stored for longer than 6 months, it is highly recommended to apply functional testing before shipping.
10. Not all fans incorporate the Lock Rotor Protection feature. For fans that do not incorporate this feature it is important not to prevent the rotation of the impeller. Doing so, will lead to failure.
11. During installation, caution should be taken when mounting the fan. Incorrect mounting can cause excess resonance, vibration and noise.
12. During testing it is important to consider safety at all times. A suitable guard should be fitted to the fan to prevent personal injury.
13. Unless otherwise stated, all tests are carried out at relative temperature and humidity conditions of 25°C, 65%.
