

Multi-channel Controller Series *PSE200*

How to Order

PSE20 **0** — **M** □ □

Input/Output specifications

0	NPN 5 outputs + Auto shift input
1	PNP 5 outputs + Auto shift input

Unit specifications

Nil	With unit display switching function
M	Fixed SI unit <i>Note</i>)

Note) Fixed unit
For vacuum low pressure & compound pressure: kPa
For high pressure: MPa

Option 2

Nil	Without connector
4C	Sensor connector (4 pcs.)

Option 1

Nil	Without panel mount/protective cover
A	Panel mount
B	Front protective cover + Panel mount

Accessory: Power supply/Output connection cable (2 m)

Included with the controller.

Option

When only optional parts are required, order with the part numbers listed below.

Description	Part no.	Note
Panel mount adapter	ZS-26-B	Waterproof seal, screws included
Front protective cover	ZS-26-01	
Front protective cover + Panel mount adapter	ZS-26-C	Waterproof seal, screws included
<input type="checkbox"/> 48 conversion adapter This adapter is used to mount Series PSE200 on the panel fitting of Series PS100.	ZS-26-D 	Order panel mount adapter separately.
Connector	ZS-26-E (4 pcs. per set)	

Specifications

Model		PSE200	PSE201		
Output specification		NPN open collector	PNP open collector		
Power supply voltage		12 to 24 VDC $\pm 10\%$, Ripple (p-p) 10% or less (With power supply polarity protection)			
Current consumption		55 mA or less (Current consumption for sensor is not included.)			
Power supply voltage for sensor		[Power supply voltage] -1.5 V			
Power supply current for sensor ^{Note 1)}		40 mA maximum (100 mA maximum for the total power supply current when 4 sensors are input.)			
Sensor input		1 to 5 VDC (Input impedance: Approx. 800 k Ω)			
	No. of inputs	4 inputs			
	Input protection	With excess voltage protection (Up to 26.4 V)			
Hysteresis	Hysteresis mode	Variable			
	Window comparator mode	3-digit fixed			
Switch output	No. of outputs	5 outputs (CH1: 2 outputs, CH2 to 4: 1 output)			
	Maximum load current	80 mA			
	Maximum load voltage	30 VDC (With NPN)			
	Residual voltage	1 V or less (With load current of 80 mA)			
	Output protection	With short circuit protection			
Response time		5 ms or less			
	Anti-chattering function	With anti-chattering function, Response time selection: 20 ms, 160 ms, 640 ms			
Repeatability		$\pm 0.1\%$ F.S. or less			
Setting/Display accuracy		$\pm 0.5\%$ F.S. ± 1 digit or less (at ambient temperature of 25° $\pm 3^\circ\text{C}$)			
Display		For measured value display: 4-digit, 7-segment indicator, Display color: Yellow For channel display: 1-digit, 7-segment indicator, Display color: Red			
Indication light		Red (Lights up when output is ON.)			
Auto shift input		Non-voltage input (Reed or Solid state), Input 10 ms or more, Independently controllable auto shift function ON/OFF			
Auto identification function ^{Note 2)}		With auto identification function			
Resistance	Enclosure	Front face: IP65, Other: IP40			
	Ambient temperature range	Operating: 0° to 50°C, Stored: -10° to 60°C (No freezing or condensation)			
	Ambient humidity range	Operating/Stored: 35 to 85% RH (No condensation)			
	Vibration resistance	10 to 500 Hz at whichever is smaller of 1.5 mm amplitude or 98 m/s ² acceleration, in X, Y, Z directions for 2 hrs. each (De-energized)			
	Impact resistance	980 m/s ² in X, Y, Z directions, 3 times each (De-energized)			
Temperature characteristics		$\pm 0.5\%$ F.S. or less based on 25°C			
Connection		Power supply/Output connection: 8P connector, Sensor connection: 4P connector			
Material		Enclosure: PBT; Display: Transparent nylon; Back rubber cover: CR			
Weight		Approx. 60 g (Power supply/output connecting cable not included)			
Applicable pressure sensor		PSE530 (For high pressure)	PSE531 (For vacuum)	PSE532 (For low pressure)	PSE533 (For compound pressure)
Regulating pressure range		-0.1 to 1 MPa	10 to -101 kPa	-10 to 101 kPa	-101 to 101 kPa
Set pressure resolution ^{Note 3)}	kPa	—	0.1	0.1	0.1
	MPa	0.001	—	—	—
	kgf/cm ²	0.01	0.001	0.001	0.001
	bar	0.01	0.001	0.001	0.001
	psi	0.1	0.01	0.01	0.02
	mmHg	—	1	—	1
InHg	—	0.1	—	0.1	

Note 1) If the Vcc and 0 V side of the sensor input connector are short circuited, the inside of the controller will be damaged.

Note 2) Auto identification function comes with "Series PSE53□" pressure sensor only. Other SMC series (PSE510 and PSE520) are not equipped with this function.

Note 3) For controllers with unit display switching function. (Either of SI units, [kPa] or [MPa], will be the set unit for those controllers without unit switching function.)

Series PSE530/200

Descriptions

4-digit display

Displays the measured pressure value, content for each setting, and error code.

Switch output display

Displays the output status of OUT1 (CH1 to CH4), OUT2 (CH1 only). Lights up when it is ON.

UP button

Use this button to change the mode or set value.

SET button

Use this button to set the mode or set value.

Unit display

The selected unit lights up. Use unit labels for units other than MPa and kPa.

Unit labels

kgf/cm² bar PSI inHg mmHg

Channel display

Displays the selected channel.

DOWN button

Use this button to change the mode or set value.

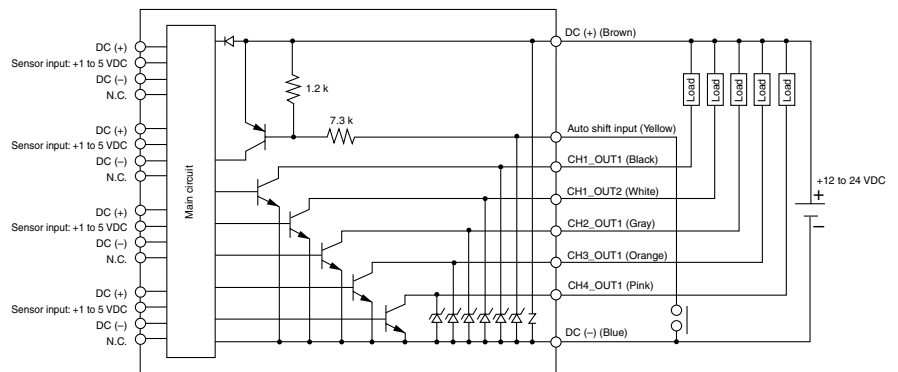

Error Code & Solution

LED display	Contents	Solution
Er 1	Excess current is flowing into the switch output of OUT1.	Shut off the power supply. After eliminating the output factor that caused the excess current, turn the power supply back on.
Er 2	Excess current is flowing into the switch output of OUT2.	
Er 3	Pressure is applied to a pressure sensor during the reset operation (a zero point adjustment) as follows: When compound pressure is used: $\pm 2.5\%$ F.S. or more. When pressure other than compound pressure is used: $\pm 5\%$ F.S. or more. * After displaying for 2 seconds, it will return to the measuring mode.	Bring the pressure back to atmospheric pressure and use the reset function (zero point adjustment) again.
---	Supply pressure exceeds the maximum regulating pressure.	Reduce/increase supply pressure to within the regulating pressure range.
---	Supply pressure is below the minimum regulating pressure.	
Er 5	Internal data error.	Please contact SMC.
Er 6	Internal data error.	Shut off the power supply and turn it back on. Please contact SMC if it does not recover.
Er 7	Internal data error.	
Er 8	Internal data error.	

Internal Circuit and Connection

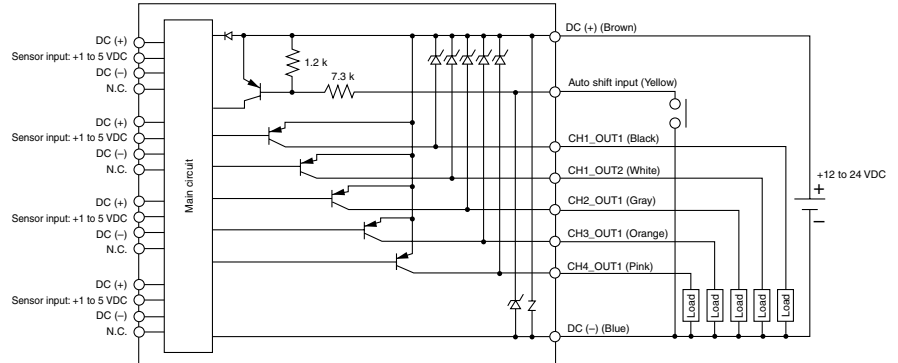

PSE200-(M)□

- NPN open collector 5 outputs + Auto shift 1 input specification

PSE201-(M)□

- PNP open collector 5 outputs + Auto shift 1 input specification

Operation 1: Initial Setting

1 Channel selection

Press **SET** button and hold for 2 seconds or longer.

2 Range setting

Note) Sensor range varies depending on the type of pressure sensor.

Pressure Sensor/Sensor Range

Sensor supply pressure	1n0 (Compound pressure)	1n1 (Vacuum)	1n2 (Low pressure)	1n3 (High pressure)
Regulating pressure range	-101 to 101 kPa	10 to -101 kPa	-10 to 101 kPa	-0.1 to 1 MPa
Applicable pressure sensor	PSE533	PSE531	PSE532	PSE530

SET → If the controller is equipped with a unit switching function, unit setting can be changed. (Refer to page 16-3-17 for details.)

3 Output mode setting

SET (For CH2, CH3, and CH4, go to ④ Response time setting.)

Data

Series PSE530/200

Operation 1: Initial Setting

4 Response time setting

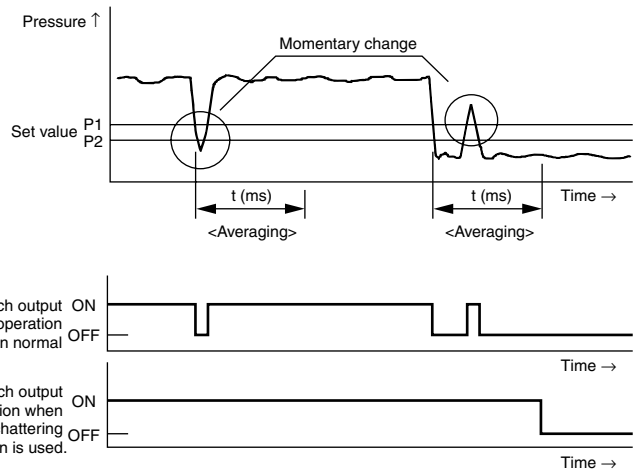

Press **SET** button.

Anti-chattering function

Devices such as large bore cylinders and high-flow vacuum ejectors consume a large volume of air when they operate, and this may cause a momentary drop in the supply pressure. This function prevents such momentary drops from being detected as abnormal pressures by changing the response time setting.

<Principle>

The pressure values measured within the response time that is selected by the user are averaged. By comparing this average pressure value with the set pressure value, switch output (ON/OFF) is determined.

5 Manual setting/Auto preset

Press **SET** button.

CH1 setting is completed when the channel display changes from blinking to lights on. Repeat the same setting steps for CH2 to CH4.

Operation 2: Pressure Setting

Manual setting

Output mode

Hysteresis mode: Hysteresis of the switch output can be set arbitrarily.

<Normally open>

<Normally closed>

Note) If the hysteresis is set for less than 2 digits, the switch output may possibly chatter when the input pressure changes around the set value.

Window comparator mode: Allows the switch output to be turned ON or OFF within any set pressure range.

<Normally open>

<Normally closed>

Note) The hysteresis is set to 3 digits. When setting the pressure, allow 7 digits or more.

Regulating pressure range	Main application	Display	Hysteresis mode	Window comparator mode
-101.0 to 101.0 kPa	Adsorption and vacuum release verification	$m0$	$P2(n2) \leq P1(n1)$	$P2(n1) > P1(n2)$
10.0 to -101.0 kPa	Adsorption verification	$m1$	$P2(n2) \geq P1(n1)$	$P2(n1) < P1(n2)$
-10.0 to 101.0 kPa	Supply pressure verification Leak test	$m2$	$P2(n2) \leq P1(n1)$	$P2(n1) > P1(n2)$
-0.1 to 1000.0 MPa		$m3$	$P2(n2) \leq P1(n1)$	$P2(n1) > P1(n2)$

* P3(n3) and P4(n4) are the same as P1(n1) and P2(n2).

Note 1) If the hysteresis is set too small, the switch output may possibly chatter when the input pressure changes around the set value.

Note 2) The hysteresis is set to 3 digits. When setting the pressure in the window comparator mode, allow 7 digits or more.

If the allowance is less than 7 digits, the controller will not operate.

Operation 2: Pressure Setting

Auto preset

Channel selection

OUT1 auto preset preparation
Prepare the equipment to be set in this mode.

OUT1 auto preset
For adsorption verification:
In this mode, repeat the adsorption and release of the workpiece for a few times. The optimum values will be set automatically.

For supply pressure verification:
The optimum values will be set automatically.

OUT2 auto preset preparation (CH1 only)

For adsorption verification:
Change the conditions of the workpiece such as the (suction) nozzle with vacuum pad attachment and supply vacuum pressure.

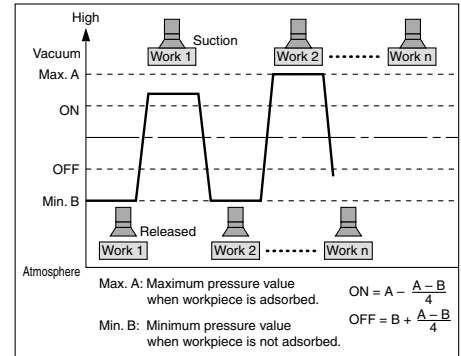

For supply pressure verification:
Prepare the equipment for the OUT2 setting in this mode.

OUT2 auto preset (CH1 only)

For adsorption verification:
In this mode, repeat the adsorption and release of the workpiece for a few times. The optimum values will be set automatically.

For supply pressure verification:
The optimum values will be set automatically.

Adsorption Verification

Operation 3: Special Setting

1 Precision indicator setting Refer to **A** Display calibration function on page 16-3-17 for details.

2 Copy setting Refer to **B** Copy setting function on page 16-3-17 for details.

Operation 3: Special Setting

3 Auto shift Refer to **C** Auto shift function on page 16-3-17 for details.

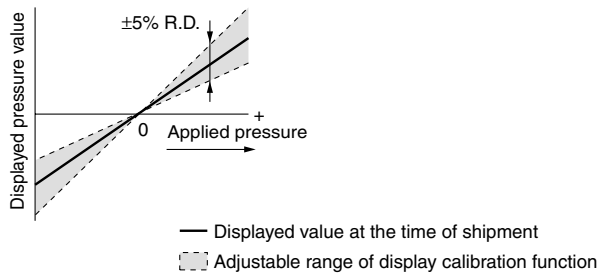

4 Auto identification Refer to **D** Auto identification function on page 16-3-17 for details.

Function Details

A Display calibration function

This function eliminates slight differences in the output values of all 4 channels and allows uniformity in the numbers displayed. Displayed values of the pressure sensors can be adjusted to within $\pm 5\%$.

Note) When the display calibration function is used, the regulating pressure value may change ± 1 digit.

C Auto shift function

If there is a fluctuation in the supply pressure, erroneous operation may occur (e.g., in the case of adsorption verification, the switch does not turn ON even though the workpiece is being adsorbed, or does not turn OFF even though the workpiece is no longer being adsorbed.) The auto shift function rectifies pressure changes to ensure proper ON/OFF switch response during such fluctuations.

<Principle>

At the point when the supply pressure fluctuates, the set pressure value is rectified by setting the auto shift input (external input) to Lo (no-voltage input), using the pressure measured at that point as a standard.

- This function is good only for those channels whose function selection is turned "on" during the auto shift mode setting.
- Maintain the constant pressure for 10 ms or more after a drop in the auto shift input.
- When the auto shift is input, "ooo" will be displayed for approximately 1 second, and the pressure value at that point will be saved as a rectified value "C_5" (for CH1) or "C_3" (for CH2 and CH3). Based on the saved rectified values, the set value "P_1" to "P_4" or "n_1" to "n_4" will likewise be rectified.
- The time from the moment the auto shift is input, to the moment the switch output actually operates is 15 ms or less.
- If the set value rectified by the auto shift input exceeds the regulating pressure range, it will be rectified once more to within the values of the regulating pressure range.
- When the auto shift function is turned "off", the shift value will be zero.
- When all of the auto shift functions are turned "off", "ooo" will not be displayed even if the auto shift input is set to Lo (no-voltage input).
- Values "C_5" and "C_3", rectified after the auto shift is input, will be lost once the power is turned off.
- Values "C_5" and "C_3", rectified after the auto shift function is used, will be reset to zero (initial value) when the power is turned back on again.

Note) Rectified values are not saved in EEPROM.

D Auto identification function

This function automatically identifies the pressure range of the pressure sensor that is connected to the multi-channel pressure sensor controller, thus eliminating the need of having to reset the range again after replacing the sensor. This function will be activated either when "Aon" is set in the auto identification mode or when the power is turned back on in that condition. However, this function only works in conjunction with specific pressure sensors (SMC Series PSE53□). When other pressure sensors are used, this function will not work. When using other types of pressure sensors, first set the auto identification mode to "AoF", and then proceed to setting the range. Turning the power back on while in the "Aon" setting can cause a malfunction.

B Copy function

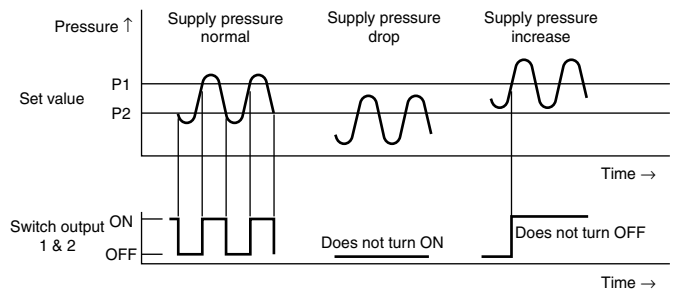

Information that can be copied includes the following: ① Pressure set values, ② Range settings, ③ Display Units, ④ Output modes, ⑤ Response times.

- When CH1 is copied to CH2, CH3, and CH4, information of OUT1 in CH1 will be copied.
- When CH2, CH3, or CH4 is copied to CH1, information of OUT1 in CH2, CH3, or CH4 will be copied only to OUT1 in CH1.

Note) When the copy function is used, the regulating pressure value of the copied channel may change ± 1 digit.

When auto shift is NOT used:

When the supply pressure fluctuates, a correct sensing is no longer possible.

When auto shift is used:

E Unit display switching function

Display units can be switched with this function.

Units that can be displayed vary depending on the range of the pressure sensors connected to the controller.

Display units can be selected using either or .

Unit Display and Resolution

Applicable pressure sensor	PSE530	PSE531	PSE532	PSE533

Operation 4: Other Functions

Reset

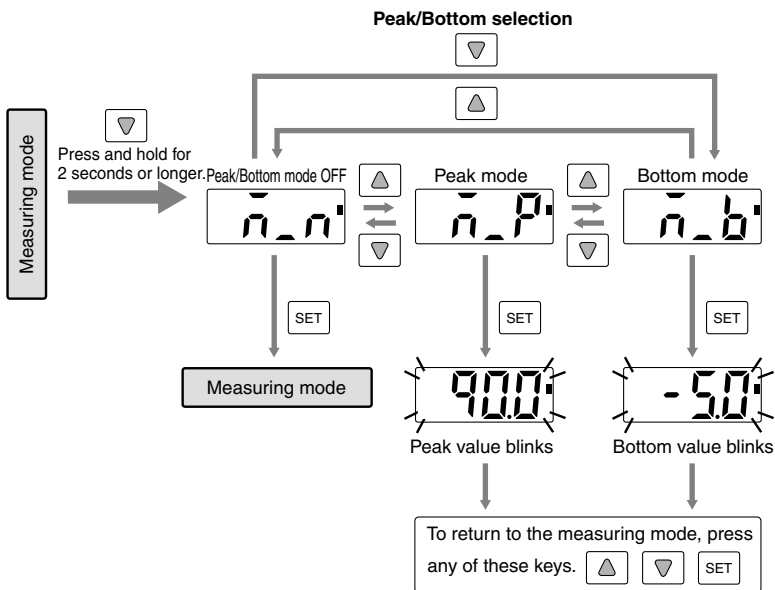

Key lock

Note) Channel selection and channel scan operation will not be locked even if the key lock function is on.

Peak/Bottom display

* If any buttons other than above are pressed during the peak/bottom mode, the peak/bottom mode will be deactivated.

Channel scan

* Pressure value for each channel are displayed at 2 second intervals.

Series PSE

Specific Product Precautions 1

Be sure to read before handling.

Pressure Sensor

Handling

Warning

1. Do not drop, bump, or apply excessive impacts (980 m/s²) while handling. Although the body of the sensor may not be damaged, the inside of the sensor could be damaged and lead to a malfunction.
2. The tensile strength of the cord is 23 N. Applying a greater pulling force on it can cause a malfunction. When handling, hold the body of the sensor—do not dangle it from the cord.
3. Do not exceed the screw-in torque of 3.5 N·m when installing piping. Exceeding this value may cause malfunctioning of the sensor.
4. Do not use pressure sensors with corrosive and/or inflammable gases or liquids.
5. Connecting the sensor cable (Option)

Hold the female connector of the sensor cable with your fingers and carefully insert it into the connector.

A connector cover is provided as part of the cable assembly (see the figure below). It is designed to keep the female connector from slipping out of the sensor. To lock the connector cover in place, first make sure it is facing in the right direction as you slip it over the female connector, then lock it to the sensor body by turning it clockwise. To remove the cover, first unlock it by turning it counterclockwise, then pull back on it. To remove the female connector, grab it with your fingers and pull back on it. Do not pull on the cable.

Operating Environment

Warning

1. The pressure sensors are CE marked; however, they are not equipped with surge protection against lightning. Lightning surge countermeasures should be applied directly to system components as necessary.
2. The pressure sensors do not have an explosion proof rating. Never use pressure sensors in the presence of inflammable or explosive gases.

Controller

Handling

Warning

1. Do not drop, bump, or apply excessive impacts (1000 m/s²) while handling. Although the body of the controller case may not be damaged, the inside of the controller could be damaged and cause a malfunction.
2. The tensile strength of the power supply/output connection cable is 50 N; that of the pressure sensor lead wire with connector is 25 N. Applying a greater pulling force than the applicable specified tensile strength to either of these components can lead to a malfunction. When handling, hold the body of the controller—do not dangle it from the cord.

Connection

Warning

1. Incorrect wiring can damage the switch and cause a malfunction or erroneous switch output. Connections should be done while the power is turned off.
2. Do not attempt to insert or pull the pressure sensor or its connector when the power is on. Switch output may malfunction.
3. Wire separately from power lines and high voltage lines, avoiding wiring in the same conduit with these lines. Malfunctions may occur due to noise from these other lines.
4. If a commercial switching regulator is used, make sure that the F.G. terminal is grounded.

Operating Environment

Warning

1. Our multi-channel pressure sensor controllers are CE marked; however, they are not equipped with surge protection against lightning. Lightning surge countermeasures should be applied directly to system components as necessary.
2. Our multi-channel pressure sensor controllers do not have an explosion proof rating. Never use pressure sensors in the presence of inflammable or explosive gases.
3. Enclosure "IP65" applies only to the front face of the panel when mounting. Do not use in an environment where oil splashing or spraying are anticipated.

Specific Product Precautions 2

Be sure to read before handling.

Mounting

⚠ Caution

The front face of the panel mount conforms to IP65 (IP40 when using the □48 conversion adapter); however, there is a possibility of liquid filtration if the panel mount adapter is not installed securely and properly. Securely fix the adaptor with screws as shown below.

Standard

Tighten screws 1/4 to 1/2 turn after the heads are flush with the panel.

When using □48 conversion adapter

Wiring

⚠ Caution

1. Connecting sensor cable and connector (ZS-26-E)

- Cut the sensor cable as shown below.
- Insert each lead wire into the corresponding connector number by following the chart provided below.

Connector no.	Core wire color of sensor cable
1	Brown (DC+)
2	Black (Analog output)
3	Blue (DC-)
4	N.C.

- Make sure that the number of connector and the core wire color match. After verifying that the wires are inserted all the way, temporarily hold the connector down manually.
- Using pliers, snap A into B as shown below so that there is no gap between A and B, and secure the connector.
- The A and B portion of the sensor connector are already tacked down temporarily at the time of shipment. Do not snap the A portion in place before inserting the cable. Note that the connector cannot be taken apart to be reused once it is crimped. Use a new sensor connector in case wiring or the snapping of A into B are done incorrectly.

- To connect the connector to the multi-channel pressure sensor, push the connector with its A portion facing toward you into the socket until it clicks as shown below.
- To remove the connector, pull it straight out while applying pressure to the fingers on both sides.

2. Connecting power supply/output connection cable

- To connect the power supply/output connection cable to the controller, insert the cable connector with the C part facing down until it clicks.

Be sure to read before handling.

Wiring

⚠ Caution

3. Connecting to other series

- Any pressure sensor (SW) can be connected as long as it generates analog output (1 to 5 V) signal. However, the pressure range must match.
- SMC pressure sensors, Series PSE510 & PSE520, are also connectable.
- When connecting to pressure sensors other than the Series PSE530, connector types will vary depending on the wire core size of the cable and the outside diameter of the insulation cover. Refer to the table provided below.

Connector part no.	Wire core size	Insulation cover O.D.	Sensor part no.
ZS-26-E	AWG24-26 (0.14 to 0.2 mm ²)	ø1.0 to 1.4	PSE510, PSE530
ZS-26-E-1	AWG24-26 (0.14 to 0.2 mm ²)	ø1.4 to 2.0	
ZS-26-E-2	AWG20-22 (0.3 to 0.5 mm ²)	ø1.0 to 1.4	PSE521
ZS-26-E-3	AWG20-22 (0.3 to 0.5 mm ²)	ø1.4 to 2.0	PSE520

- Refer to the following diagram for connecting Series PSE520 to the connector.

Connect the shielding wire to the frame ground (F.G.) or F.G. terminal.

(There is no shielding wire for Series PSE510 & PSE530.)

Regulating Pressure Range & Rated Pressure Range

⚠ Caution

1. Regulating pressure range: Refers to allowable pressure range in a pressure setting mode.

- Setting range is between P_1(n_1) to P_4(n_4).
- For Series PSE200, the regulating pressure range and the setting pressure range that can be displayed are the same.

2. Rated pressure range: Refers to the pressure range that satisfies the product specifications.

- Pressure range that satisfies the product specifications (accuracy and linearity) for PSE530.

Safety Instructions

These safety instructions are intended to prevent a hazardous situation and/or equipment damage. These instructions indicate the level of potential hazard by labels of "Caution", "Warning" or "Danger". To ensure safety, be sure to observe ISO 4414 ^{Note 1)}, JIS B 8370 ^{Note 2)} and other safety practices.

 **Caution** : Operator error could result in injury or equipment damage.

 **Warning** : Operator error could result in serious injury or loss of life.

 **Danger** : In extreme conditions, there is a possible result of serious injury or loss of life.

Note 1) ISO 4414: Pneumatic fluid power--General rules relating to systems.

Note 2) JIS B 8370: General Rules for Pneumatic Equipment

Warning

1. The compatibility of pneumatic equipment is the responsibility of the person who designs the pneumatic system or decides its specifications.

Since the products specified here are used in various operating conditions, their compatibility for the specific pneumatic system must be based on specifications or after analysis and/or tests to meet your specific requirements. The expected performance and safety assurance will be the responsibility of the person who has determined the compatibility of the system. This person should continuously review the suitability of all items specified, referring to the latest catalog information with a view to giving due consideration to any possibility of equipment failure when configuring a system.

2. Only trained personnel should operate pneumatically operated machinery and equipment.

Compressed air can be dangerous if an operator is unfamiliar with it. Assembly, handling or repair of pneumatic systems should be performed by trained and experienced operators.

3. Do not service machinery/equipment or attempt to remove components until safety is confirmed.

1. Inspection and maintenance of machinery/equipment should only be performed once measures to prevent falling or runaway of the driver objects have been confirmed.
2. When equipment is to be removed, confirm the safety process as mentioned above. Cut the supply pressure for this equipment and exhaust all residual compressed air in the system.
3. Before machinery/equipment is restarted, take measures to prevent shooting-out of cylinder piston rod, etc.

4. Contact SMC if the product is to be used in any of the following conditions:

1. Conditions and environments beyond the given specifications, or if product is used outdoors.
2. Installation on equipment in conjunction with atomic energy, railway, air navigation, vehicles, medical equipment, food and beverages, recreation equipment, emergency stop circuits, clutch and brake circuits in press applications, or safety equipment.
3. An application which has the possibility of having negative effects on people, property, or animals, requiring special safety analysis.

Common Precautions

Be sure to read before handling.

For detailed precautions on every series, refer to main text.

Selection

Warning

1. Confirm the specifications.

Products represented in this catalog are designed for use in compressed air applications only (including vacuum), unless otherwise indicated.

Do not use the product outside their design parameters.

Please contact SMC when using the products in applications other than compressed air (including vacuum).

Mounting

Warning

1. Instruction manual

Install the products and operate them only after reading the instruction manual carefully and understanding its contents. Also keep the manual where it can be referred to as necessary.

2. Securing the space for maintenance

When installing the products, please allow access for maintenance.

3. Tightening torque

When installing the products, please follow the listed torque specifications.

Piping

Caution

1. Before piping

Make sure that all debris, cutting oil, dust, etc., are removed from the piping.

2. Wrapping of pipe tape

When screwing piping or fittings into ports, ensure that chips from the pipe threads or sealing material do not get inside the piping. Also, when the pipe tape is used, leave 1.5 to 2 thread ridges exposed at the end of the threads.

Air Supply

Warning

1. Operating fluid

Please consult with SMC when using the product in applications other than compressed air (including vacuum).

Regarding products for general fluid, please ask SMC about applicable fluids.

2. Install an air dryer, aftercooler, etc.

Excessive condensate in a compressed air system may cause valves and other pneumatic equipment to malfunction.

Installation of an air dryer, after cooler etc. is recommended.

3. Drain flushing

If condensate in the drain bowl is not emptied on a regular basis, the bowl will over flow and allow the condensate to enter the compressed air lines.

If the drain bowl is difficult to check and remove, it is recommended that a drain bowl with the auto-drain option be installed.

For compressed air quality, refer to "Air Preparation Equipment" catalog.

4. Use clean air

If the compressed air supply is contaminated with chemicals, synthetic materials, corrosive gas, etc., it may lead to break down or malfunction.

Operating Environment

Warning

1. Do not use in environments where the product is directly exposed to corrosive gases, chemicals, salt water, water or steam.

2. Do not expose the product to direct sunlight for an extended period of time.

3. Do not use in a place subject to heavy vibrations and/or shocks.

4. Do not mount the product in locations where it is exposed to radiant heat.

Maintenance

Warning

1. Maintenance procedures are outlined in the operation manual.

Not following proper procedures could cause the product to malfunction and could lead to damage to the equipment or machine.

2. Maintenance work

If handled improperly, compressed air can be dangerous.

Assembly, handling and repair of pneumatic systems should be performed by qualified personnel only.

3. Drain flushing

Remove drainage from air filters regularly. (Refer to the specifications.)

4. Shut-down before maintenance

Before attempting any kind of maintenance make sure the supply pressure is shut of and all residual air pressure is released from the system to be worked on.

5. Start-up after maintenance and inspection

Apply operating pressure and power to the equipment and check for proper operation and possible air leaks. If operation is abnormal, please verify product set-up parameters.

6. Do not make any modifications to be product.

Do not take the product apart.

Quality Assurance Information (ISO 9001, ISO 14001)

Reliable quality of products in the global market

To enable our customers throughout the world to use our products with even greater confidence, SMC has obtained certification for international standards “ISO 9001” and “ISO 14001”, and created a complete structure for quality assurance and environmental controls. SMC products pursue to meet its customers’ expectations while also considering company’s contribution in society.

Quality management system ISO 9001

This is an international standard for quality control and quality assurance. SMC has obtained a large number of certifications in Japan and overseas, providing assurance to our customers throughout the world.

Environmental management system ISO 14001

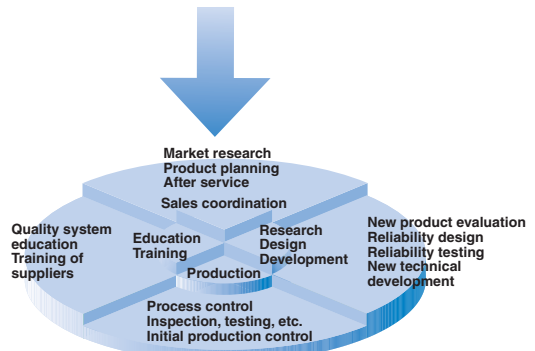

This is an international standard related to environmental management systems and environmental inspections. While promoting environmentally friendly automation technology, SMC is also making diligent efforts to preserve the environment.

SMC’s quality control system

Quality policies

Quality control activities

SMC Product Conforming to Inter

SMC products complying with EN/ISO, CSA/UL standards are supporting

The CE mark indicates that machines and components meet essential requirements of all the EC Directives applied.

It has been obligatory to apply CE marks indicating conformity with EC Directives when machines and components are exported to the member Nations of the EU.

Once "A manufacturer himself" declares a product to be safe by means of CE marking (declaration of conformity by manufacturer), free distribution inside the member Nations of the EU is permissible.

■ CE Mark

SMC provides CE marking to products to which EMC and Low Voltage Directives have been applied, in accordance with CETOP (European hydraulics and pneumatics committee) guide lines.

■ As of February 1998, the following 18 countries will be obliged to conform to CE mark legislation

Iceland, Ireland, United Kingdom, Italy, Austria, Netherlands, Greece, Liechtenstein, Sweden, Spain, Denmark, Germany, Norway, Finland, France, Belgium, Portugal, Luxembourg

■ EC Directives and Pneumatic Components

• Machinery Directive

The Machinery Directive contains essential health and safety requirements for machinery, as applied to industrial machines e.g. machine tools, injection molding machines and automatic machines. Pneumatic equipment is not specified in Machinery Directive. However, the use of SMC products that are certified as conforming to EN Standards, allows customers to simplify preparation work of the Technical Construction File required for a Declaration of Conformity.

• Electromagnetic Compatibility (EMC) Directive

The EMC Directive specifies electromagnetic compatibility. Equipment which may generate electromagnetic interference or whose function may be compromised by electromagnetic interference is required to be immune to electromagnetic affects (EMS/immunity) without emitting excessive electromagnetic affects (EMI/emission).

• Low Voltage Directive

This directive is applied to products, which operate above 50 VAC to 1000 VAC and 75 VDC to 1500 VDC operating voltage, and require electrical safety measures to be introduced.

• Simple Pressure Vessels Directive

This directive is applied to welded vessels whose maximum operating pressure (PS) and volume of vessel (V) exceed 50 bar/L. Such vessels require EC type examination and then CE marking.

national Standards

you to comply with EC directives and CSA/UL standards.

■ CSA Standards & UL Standards

UL and CSA standards have been applied in North America (U.S.A. and Canada) symbolizing safety of electric products, and are defined to mainly prevent danger from electric shock or fire, resulting from trouble with electric products. Both UL and CSA standards are acknowledged in North America as the first class certifying body. They have a long experience and ability for issuing product safety certificate. Products approved by CSA or UL standards are accepted in most states and governments beyond question.

Since CSA is a test certifying body as the National Recognized Testing Laboratory (NRTL) within the jurisdiction of Occupational Safety and Health Administration (OSHA), SMC was tested for compliance with CSA Standards and UL Standards at the same time and was approved for compliance with the two Standards. The above CSA NRTL/C logo is described on a product label in order to indicate that the product is approved by CSA and UL Standards.

■ TSSA (MCCR) Registration Products

TSSA is the regulation in Ontario State, Canada. The products that the operating pressure is more than 5 psi (0.03 MPa) and the piping size is bigger than 1 inch. fall into the scope of TSSA regulation.

Products conforming to CE Standard

With CE symbol for simple visual recognition

In this catalog each accredited product series is indicated with a CE mark symbol. However, in some cases, every available models may not meet CE compliance. Please visit our web site for the latest selection of available models with CE mark.
