

# FS6S1565RB

## Fairchild Power Switch(FPS)

### Features

- Wide operating frequency range up to 150Khz
- Internal Burst mode Controller for Stand-by mode
- Pulse by pulse over current limiting
- Over current protection(Auto restart mode)
- Over voltage protection (Auto restart mode)
- Over load protection(Auto restart mode)
- Internal thermal shutdown function(Auto restart mode)
- Under voltage lockout
- Internal high voltage sense FET
- Eternal sync terminal/Soft start

### Description

The Fairchild Power Switch(FPS) product family is specially designed for an off-line SMPS with minimal external components. The Fairchild Power Switch(FPS) consist of high voltage power SenseFET and current mode PWM IC. Included PWM controller features integrated fixed oscillator, under voltage lock out, optimized gate turn-on/turn-off driver, thermal shut down protection, over voltage protection, and temperature compensated precision current sources for loop compensation and fault protection circuitry. compared to discrete MOSFET and controller or RCC switching converter solution, a Fairchild Power Switch(FPS) can reduce total component count, design size, and weight and at the same time increase efficiency, productivity, and system reliability. It has a basic platform well suited for cost effective monitor power supply.

### Internal Block Diagram

## Absolute Maximum Ratings

(Ta=25°C, unless otherwise specified)

| Parameter  | Symbol                    | Value                   | Unit |
|--|---------------------------|-------------------------|------|
| Drain-source(GND) voltage <sup>(1)</sup>         | V <sub>DSS</sub>          | 650                     | V    |
| Drain-Gate Voltage (R <sub>GS</sub> =1MΩ)        | V <sub>DGR</sub>          | 650                     | V    |
| Gate-source (GND) Voltage                        | V <sub>GS</sub>           | ±30                     | V    |
| Drain current pulsed <sup>(2)</sup>              | I <sub>DM</sub>           | 60                      | ADC  |
| Single pulsed avalanche energy <sup>(3)</sup>    | E <sub>AS</sub>           | 1040                    | mJ   |
| Single Pulsed Avalanche current <sup>(4)</sup>   | I <sub>AS</sub>           | 37                      | A    |
| Continuous drain current (T <sub>c</sub> = 25°C) | I <sub>D</sub>            | 15                      | ADC  |
| Continuous drain current (T <sub>C</sub> =100°C) | I <sub>D</sub>            | 9.5                     | ADC  |
| Supply voltage                                   | V <sub>CC</sub>           | 35                      | V    |
| Input Voltage Range                              | V <sub>FB</sub>           | -0.3 to V <sub>CC</sub> | V    |
|  | V <sub>S_S</sub>          | -0.3 to 10              | V    |
| Total Power Dissipation                          | P <sub>D</sub> (Watt H/S) | 270                     | W    |
|  | Derating                  | 2.17                    | W/°C |
| Operating junction temperature                   | T <sub>j</sub>            | +160                    | °C   |
| Operating Ambient Temperature                    | T <sub>A</sub>            | -25 to +85              | °C   |
| Storage Temperature range                        | T <sub>STG</sub>          | -55 to +150             | °C   |

### Notes:

1. T<sub>j</sub>=25°C to 150°C
2. Repetitive rating: Pulse width limited by maximum junction temperature
3. L=8.5mH, starting T<sub>j</sub>=25°C
4. L=13uH, starting T<sub>j</sub>=25°C

## Electrical Characteristics (SFET part)

### Notes:

- (1) These parameters is the current flowing in the Control IC.
- (2) These parameters, although guaranteed, are tested in EDS(wafer test) process.
- (3) These parameters indicate Inductor Current.
- (4) These parameters, although guranteed at the design, are not tested in massing production.
