TS274

High performance CMOS quad operational amplifier

Features

- Output voltage can swing to ground
- Excellent phase margin on capacitive loads
- Gain bandwidth product: 3.5 MHz
- Unity gain stable
- Two input offset voltage selections

Description

The TS274 devices are low cost, quad operational amplifiers designed to operate with single or dual supplies. These operational amplifiers use the ST silicon gate CMOS process giving an excellent consumption-speed ratio. These series are ideally suited for low consumption applications.

Three power consumptions are available thus offering the best consumption-speed ratio for your application:

- I_{CC} = 10 µA/amp: TS27L4 (very low power)
- I_{CC} = 150 µA/amp: TS27M4 (low power)
- I_{CC} = 1 mA/amp: TS274 (standard)

These CMOS amplifiers offer very high input impedance and extremely low input currents. The major advantage versus JFET devices is the very low input currents drift with temperature (see *Figure 5 on page 6*).

For enhanced features of TS274, in particular rail-to-rail capability and low offset voltage, two new families, TSV91x and TSV99x will better suit low voltage applications.

Table 1. Enhanced related families

Part number	V_{CC} range (V)	Rail-to-rail I/O	V_{io} max (mV)	I_{ib} max (pA)	A_{vd} min (dB)	I_{CC} max (mA)	GBP typ (MHz)	SR typ (V/µs)	Packages
TSV914	2.5 - 5.5	I/O	1.5/4.5	10	80	1.1	8	4.5	SO-14, TSSOP14
TSV994	2.5 - 5.5	I/O	1.5/4.5	10	80	1.1	20 (G ≥3)	10	SO-14, TSSOP14

1 Absolute maximum ratings and operating conditions

Table 2. Absolute maximum ratings (AMR)

Symbol	Parameter	TS274C/AC	TS274I/AI	Unit
V_{CC}^+	Supply voltage (1)	18		V
V_{id}	Differential input voltage (2)	±18		V
V_{in}	Input voltage (3)	-0.3 to 18		V
I_o	Output current for $V_{CC}^+ \geq 15V$	±30		mA
I_{in}	Input current	±5		mA
T_{oper}	Operating free-air temperature range	0 to +70	-40 to +125	°C
T_{stg}	Storage temperature range	-65 to +150		°C
R_{thja}	Thermal resistance junction to ambient(4) SO-14 TSSOP14 DIP14	 103 100 80		°C/W
R_{thjc}	Thermal resistance junction to case SO-14 TSSOP14 DIP14	 31 32 33		°C/W
ESD	HBM: human body model(5)	500		V
	MM: machine model(6)	100		V
	CDM: charged device model(7)	800		V

1. All values, except differential voltage are with respect to network ground terminal.
2. Differential voltages are the non-inverting input terminal with respect to the inverting input terminal.
3. The magnitude of the input and the output voltages must never exceed the magnitude of the positive supply voltage.
4. Short-circuits can cause excessive heating and destructive dissipation. Values are typical.
5. Human body model: A 100pF capacitor is charged to the specified voltage, then discharged through a 1.5kΩ resistor between two pins of the device. This is done for all couples of connected pin combinations while the other pins are floating.
6. Machine model: A 200pF capacitor is charged to the specified voltage, then discharged directly between two pins of the device with no external series resistor (internal resistor < 5Ω). This is done for all couples of connected pin combinations while the other pins are floating.
7. Charged device model: all pins and the package are charged together to the specified voltage and then discharged directly to the ground through only one pin. This is done for all pins.

Table 3. Operating conditions

Symbol	Parameter	Value	Unit
V_{CC}^+	Supply voltage	3 to 16	V
V_{icm}	Common mode input voltage range	0 to V_{CC}^+ - 1.5	V
T_{oper}	Operating free-air temperature range TS274C TS274I	 0 to 70 -40 to 125	°C

4 Macromodel

4.1 Important note concerning this macromodel

Please consider the following remarks before using this macromodel.

- All models are a trade-off between accuracy and complexity (i.e. simulation time).
- Macromodels are not a substitute to breadboarding; rather, they confirm the validity of a design approach and help to select surrounding component values.
- A macromodel emulates the **nominal** performance of a **typical** device within **specified operating conditions** (temperature, supply voltage, for example). Thus the macromodel is often not as exhaustive as the datasheet, its purpose is to illustrate the main parameters of the product.

Data derived from macromodels used outside of the specified conditions (V_{CC}, temperature, for example) or even worse, outside of the device operating conditions (V_{CC}, V_{icm}, for example), is not reliable in any way.

5 Package information

In order to meet environmental requirements, ST offers these devices in ECOPACK® packages. These packages have a lead-free second level interconnect. The category of second level interconnect is marked on the package and on the inner box label, in compliance with JEDEC Standard JESD97. The maximum ratings related to soldering conditions are also marked on the inner box label. ECOPACK is an ST trademark. ECOPACK specifications are available at: www.st.com.
