# QUAD SINGLE-SUPPLY OPERATIONAL AMPLIFIER 

## - GENERAL DESCRIPTION

The NJM2902 consists of four independent high-gain operational amplifiers that are designed for single-supply operation.

Operation from split power supplies is also possible and the low power supply drain is independent of the magnitude of the power supply voltage.

Used with a dual supply the circuit will operate over a wide range of supply voltages. However, a large amount of crossover distortion may occur with loads to ground. An external current-sinking resistor to- $\mathrm{V}_{\mathrm{S}}$ will reduce crossover distortion. There is no crossover distortion problem in single-supply operation if the load is direct-coupled to ground.

## - FEATURES

- Single Supply
- Operating Voltage
- High Output Voltage
- Slew Rate
- Low Operating Current
- Package Outline
- Bipolar Technology
- PIN CONFIGURATION

NJM2902N
NJM2902M
NJM2902V

PIN FUNCTION
1.A OUTPUT
2.A-INPUT 3.A + INPUT 4. $\mathbf{V}^{+}$
5.B +INPUT
6.B-INPUT
7.B OUTPUT

Improvement of Cross-over Distortion Equivalent circuit at the output stage

NJM2902,in its static state ( No in and output condition ) when design, $Q_{U}$ being biassed by constant current ( break down beam ) yet, $Q_{L}$ stays OFF.
While using with both power source mode, the cross-over distortion might occur instantly when $Q_{\llcorner } \mathrm{ON}$.
There might be cases when application for amplifier of audio signals, not only distortion but also the apparent frequency bandwidth being narrowed remarkably.
It is adjustable especially when using both power source mode, constantly to use with higher current on $Q_{u}$ than the load current ( including feedback current ),and then connect the pull-down resister $R_{P}$ at the part between output and GND pins.

[CAUTION]
The specifications on this databook are only given for information, without any guarantee as regards either mistakes or omissions. The application circuits in this databook are described only to show representative usages of the product and not intended for the guarantee or permission of any right including the industrial rights.
