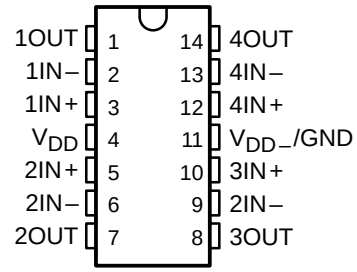
# LinCMOS™ QUAD OPERATIONAL AMPLIFIERS

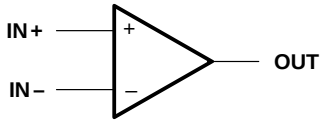
SLOS003G – JUNE 1983 – REVISED MARCH 2001

- **A-Suffix Versions Offer 5-mV $V_{IO}$**
- **B-Suffix Versions Offer 2-mV $V_{IO}$**
- **Wide Range of Supply Voltages 1.4 V to 16 V**
- **True Single-Supply Operation**
- **Common-Mode Input Voltage Includes the Negative Rail**
- **Low Noise . . . 25 nV/$\sqrt{\text{Hz}}$ Typ at f = 1 kHz (High-Bias Version)**

**D, N, OR PW PACKAGE**
**(TOP VIEW)**



## symbol (each amplifier)



## description

The TLC254, TLC254A, TLC254B, TLC25L4, TLC254L4A, TLC254L4B, TLC25M4, TLC25M4A and TL25M4B are low-cost, low-power quad operational amplifiers designed to operate with single or dual supplies. These devices utilize the Texas Instruments silicon gate LinCMOS™ process, giving them stable input-offset voltages that are available in selected grades of 2, 5, or 10 mV maximum, very high input impedances, and extremely low input offset and bias currents. Because the input common-mode range extends to the negative rail and the power consumption is extremely low, this series is ideally suited for battery-powered or energy-conserving applications. The series offers operation down to a 1.4-V supply, is stable at unity gain, and has excellent noise characteristics.

These devices have internal electrostatic-discharge (ESD) protection circuits that prevent catastrophic failures at voltages up to 2000 V as tested under MIL-STD-883C, Method 3015.1. However, care should be exercised in handling these devices as exposure to ESD may result in degradation of the device parametric performance.

Because of the extremely high input impedance and low input bias and offset currents, applications for these devices include many areas that have previously been limited to BIFET and NFET product types. Any circuit using high-impedance elements and requiring small offset errors is a good candidate for cost-effective use of these devices. Many features associated with bipolar technology are available with LinCMOS operational amplifiers without the power penalties of traditional bipolar devices.

**Available options**

| $T_A$ | $V_{IO}$max AT 25°C | PACKAGED DEVICES | | | CHIP FORM (Y) |
|---|---|---|---|---|---|
| | | SMALL OUTLINE (D) | PLASTIC DIP (N) | TSSOP (PW) | |
| 0°C to 70°C | 10 mV | TLC254CD | TLC254CN | TLC254CPW | TLC254Y |
| | 5 mV | TLC254ACD | TLC254ACN | — | — |
| | 2 mV | TLC254BCD | TLC254BCN | — | — |
| | 10 mV | TLC25L4CD | TLC25L4CN | TLC25L4CPW | TLC25L4Y |
| | 5 mV | TLC25L4ACD | TLC25L4ACN | — | — |
| | 2 mV | TLC25L2BCD | TLC25L4BCN | — | — |
| | 10 mV | TLC25M4CD | TLC25M4CN | TLC25M4CPW | TLC25M4Y |
| | 5 mV | TLC25M4ACD | TLC25M4ACN | — | — |
| | 2 mV | TLC25M4BCD | TLC25M4BCN | — | — |

The D package is available taped and reeled. Add the suffix R to the device type (e.g., TLC254CDR). Chips are tested at 25°C.

LinCMOS is a trademark of Texas Instruments.

## description (continued)

General applications such as transducer interfacing, analog calculations, amplifier blocks, active filters, and signal buffering are all easily designed with these devices. Remote and inaccessible equipment applications are possible using their low-voltage and low-power capabilities. These devices are well suited to solve the difficult problems associated with single-battery and solar-cell-powered applications. This series includes devices that are characterized for the commercial temperature range and are available in 14-pin plastic dip and the small-outline packages. The device is also available in chip form.

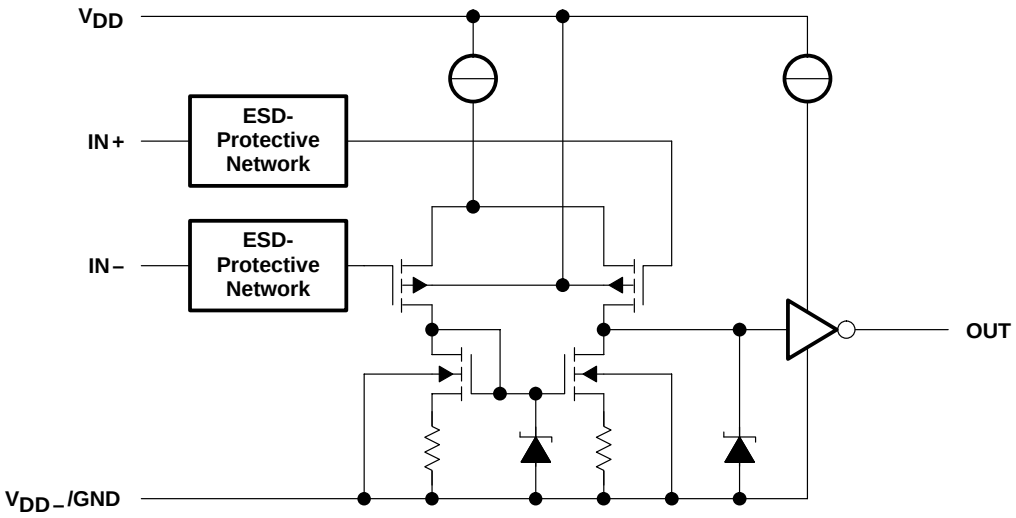
These devices are characterized for operation from 0°C to 70°C.

**DEVICE FEATURES**

| PARAMETER | TLC25L4_C (LOW BIAS) | TLC25M4_C (MEDIUM BIAS) | TLC254_C (HIGH BIAS) |
|---|---|---|---|
| Supply current (Typ) | 40 μA | 600 μA | 4000 μA |
| Slew rate (Typ) | 0.04 V/μA | 0.6 V/μA | 4.5 V/μA |
| Input offset voltage (Max)<br>TLC254C, TLC25L4C, TLC25M4C<br>TLC254AC, TLC25L4AC, TLC25M4AC<br>TLC254BC, TLC25L4BC, TLC25M4BC | <br>10 mV<br>5 mV<br>2 mV | <br>10 mV<br>5 mV<br>2 mV | <br>10 mV<br>5 mV<br>2 mV |
| Offset voltage drift (Typ) | 0.1 μV/month† | 0.1 μV/month† | 0.1 μV/month† |
| Offset voltage temperature coefficient (Typ) | 0.7 μV/°C | 2 μV/°C | 5 μV/°C |
| Input bias current (Typ) | 1 pA | 1 pA | 1 pA |
| Input offset current (Typ) | 1 pA | 1 pA | 1 pA |

† The long-term drift value applies after the first month.

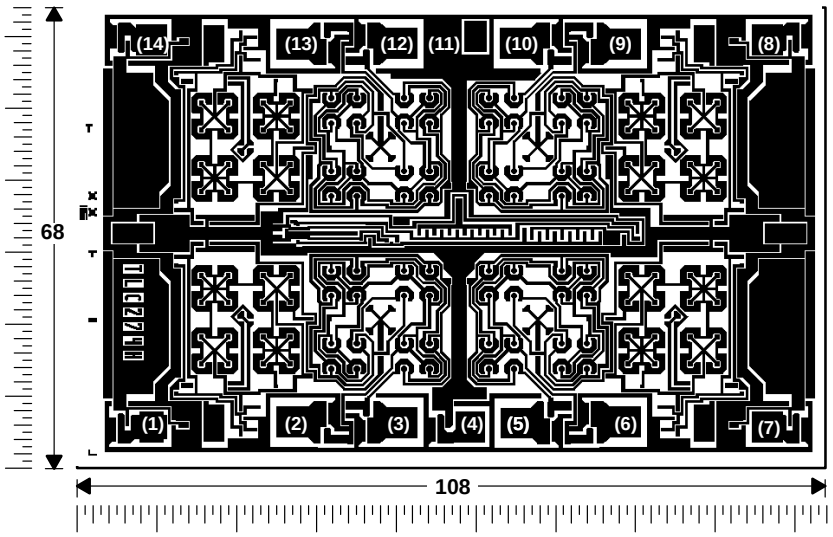
## equivalent schematic (each amplifier)

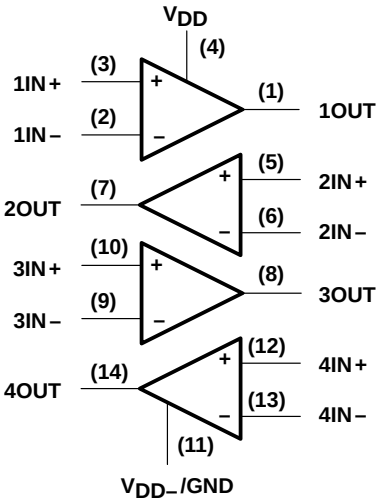


## chip information

These chips, when properly assembled, display characteristics similar to the TLC25_4C. Thermal compression or ultrasonic bonding may be used on the doped-aluminum bonding pads. Chips may be mounted with conductive epoxy or a gold-silicon preform.

**BONDING PAD ASSIGNMENTS**





**CHIP THICKNESS: 15 TYPICAL**

**BONDING PADS: 4 × 4 MINIMUM**

**$T_J$max = 150°C**

**TOLERANCES ARE ±10%.**

**ALL DIMENSIONS ARE IN MILS.**

**PIN (11) IS INTERNALLY CONNECTED TO BACKSIDE OF CHIP.**

### absolute maximum ratings over operating free-air temperature range (unless otherwise noted)†

Supply voltage, $V_{DD}$ (see Note 1) . . . . . 18 V
Differential input voltage (see Note 2) . . . . . ±18 V
Input voltage range (any input) . . . . . –0.3 V to 18 V
Duration of short-circuit at (or below) 25°C free-air temperature (see Note 3) . . . . . unlimited
Continuous total dissipation . . . . . See Dissipation Rating Table
Operating free-air temperature range . . . . . 0°C to 70°C
Storage temperature range . . . . . –65°C to 150°C
Lead temperature 1,6 mm (1/16 inch) from case for 10 seconds . . . . . 260°C

† Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTES: 1. All voltage values, except differential voltages, are with respect to $V_{DD-}$/GND.
2. Differential voltages are at IN+, with respect to IN–.
3. The output may be shorted to either supply. Temperature and/or supply voltages must be limited to ensure the maximum dissipation rating is not exceeded.

**DISSIPATION RATING TABLE**

| PACKAGE | $T_A \le 25°C$ POWER RATING | DERATING FACTOR ABOVE $T_A = 25°C$ | $T_A = 70°C$ POWER RATING |
|---|---|---|---|
| D | 725 mW | 5.8 mW/°C | 464 mW |
| N | 1050 mW | 9.2 mW/°C | 736 mW |
| PW | 700 mW | 5.6 mW/°C | 448 mW |

### recommended operating conditions

| | | MIN | MAX | UNIT |

| | | TLC25_4BC | | 25°C | | | 2 | | | 2 | | | 2 | |
| | | | | 0°C to 70°C | | | 3 | | | 3 | | | 3 | |
| $a_{VIO}$ | Average temperature coefficient of input offset voltage | | | 25°C to 70°C | | 1 | | | 1 | | | 1 | | µV/°C |
| $I_{IO}$ | Input offset current | | $V_O$ = 0.2 V | 25°C | | 1 | 60 | | 1 | 60 | | 1 | 60 | pA |
| | | | | 0°C to 70°C | | | 300 | | | 300 | | | 300 | |
| $I_{IB}$ | Input bias current | | $V_O$ = 0.2 V | 25°C | | 1 | 60 | | 1 | 60 | | 1 | 60 | pA |
| | | | | 0°C to 70°C | | | 600 | | | 600 | | | 600 | |
| $V_{ICR}$ | Common-mode input voltage range | | | 25°C | 0 to 0.2 | | | 0 to 0.2 | | | 0 to 0.2 | | | V |
| $V_{OM}$ | Peak output voltage swing‡ | | $V_{ID}$ = 100 mV | 25°C | 450 | 700 | | 450 | 700 | | 450 | 700 | | mV |
| $A_{VD}$ | Large-signal differential voltage amplification | | $V_O$ = 100 to 300 mV, $R_S$ = 50 Ω | 25°C | | 10 | | | 20 | | | 20 | | V/mV |
| CMRR | Common-mode rejection ratio | | $V_O$ = 0.2 V, $V_{IC}$ = $V_{ICR}$min | 25°C | 60 | 77 | | 60 | 77 | | 60 | 77 | | dB |
| $I_{DD}$ | Supply current | | $V_O$ = 0.2 V, No load | 25°C | | 600 | 750 | | 50 | 68 | | 400 | 500 | µA |

† All characteristics are measured under open-loop conditions with zero common-mode input voltage unless otherwise specified. Unless otherwise noted, an output load resistor is connected from the output to ground and has the following value: for low bias, $R_L$ = 1 MΩ, for medium bias $R_L$ = 100 kΩ, and for high bias $R_L$ = 10 kΩ.

‡ The output swings to the potential of $V_{DD-}$/GND.

## operating characteristics, $V_{DD}$ = 1.4 V, $T_A$ = 25°C

| $k_{SVR}$ | Supply-voltage rejection ratio ($\Delta V_{DD}/\Delta V_{IO}$) | $V_{DD}$ = 5 V to 10 V, $V_O$ = 1.4 V | 65 | 95 | | 70 | 97 | | 70 | 93 | | dB |
| $I_{DD}$ | Supply current | $V_O = V_{DD}/2$, $V_{IC} = V_{DD}/2$, No load | | 2.7 | 6.4 | | 0.04 | 0.068 | | 0.42 | 1.12 | mA |

NOTES: 4. The typical values of input bias current and input offset current below 5 pA were determined mathematically.
5. This range also applies to each input individually.
6. For low-bias mode, $R_L$ = 1 MΩ, for medium-bias mode, $R_L$ = 100 kΩ, and for high-bias mode, $R_L$ = 10 kΩ.

## operating characteristics, $V_{DD}$ = 5 V, $T_A$ = 25°C

NOTE 6: For low-bias mode, $R_L$ = 1 MΩ, for medium-bias mode, $R_L$ = 100 kΩ, and for high-bias mode, $R_L$ = 10 kΩ.

## PARAMETER MEASUREMENT INFORMATION

### single-supply versus split-supply test circuits

Because the TLC25_4, TLC25_4A, and TLC25_4B are optimized for single-supply operation, circuit configurations used for the various tests often present some inconvenience since the input signal, in many cases, must be offset from ground. This inconvenience can be avoided by testing the device with split supplies and the output load tied to the negative rail. A comparison of single-supply versus split-supply test circuits is shown below. The use of either circuit gives the same result.

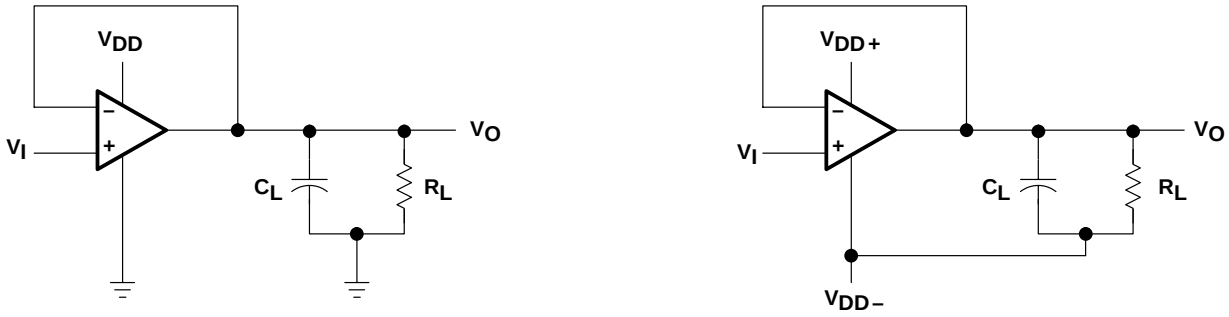

**Figure 1. Unity-Gain Amplifier**

## APPLICATION INFORMATION

### latch-up avoidance

Junction-isolated CMOS circuits have an inherent parasitic PNPN structure that can function as an SCR. Under certain conditions, this SCR may be triggered into a low-impedance state, resulting in excessive supply current. To avoid such conditions, no voltage greater than 0.3 V beyond the supply rails should be applied to any pin. In general, the operational amplifiers supplies should be established simultaneously with, or before, application of any input signals.

### output stage considerations

The amplifier's output stage consists of a source-follower-connected pullup transistor and an open-drain pulldown transistor. The high-level output voltage ($V_{OH}$) is virtually independent of the $I_{DD}$ selection and increases with higher values of $V_{DD}$ and reduced output loading. The low-level output voltage ($V_{OL}$) decreases with reduced output current and higher input common-mode voltage. With no load, $V_{OL}$ is essentially equal to the potential of $V_{DD-}$/GND.

### supply configurations

Even though the TLC25_4C series is are characterized for single-supply operation, they can be used effectively in a split-supply configuration if the input common-mode voltage ($V_{ICR}$), output swing ($V_{OL}$ and $V_{OH}$), and supply voltage limits are not exceeded.

### circuit layout precautions

Whenever extremely high circuit impedances are used, care must be exercised in layout, construction, board cleanliness, and supply filtering to avoid hum and noise pickup as well as excessive dc leakages.

## PACKAGING INFORMATION

| Orderable Device | Status (1) | Package Type | Package Drawing | Pins | Package Qty | Eco Plan (2) | Lead/Ball Finish | MSL Peak Temp (3) |
|---|---|---|---|---|---|---|---|---|
| TLC254ACD | ACTIVE | SOIC | D | 14 | 50 | Green (RoHS & no Sb/Br) | CU NIPDAU | Level-1-260C-UNLIM |

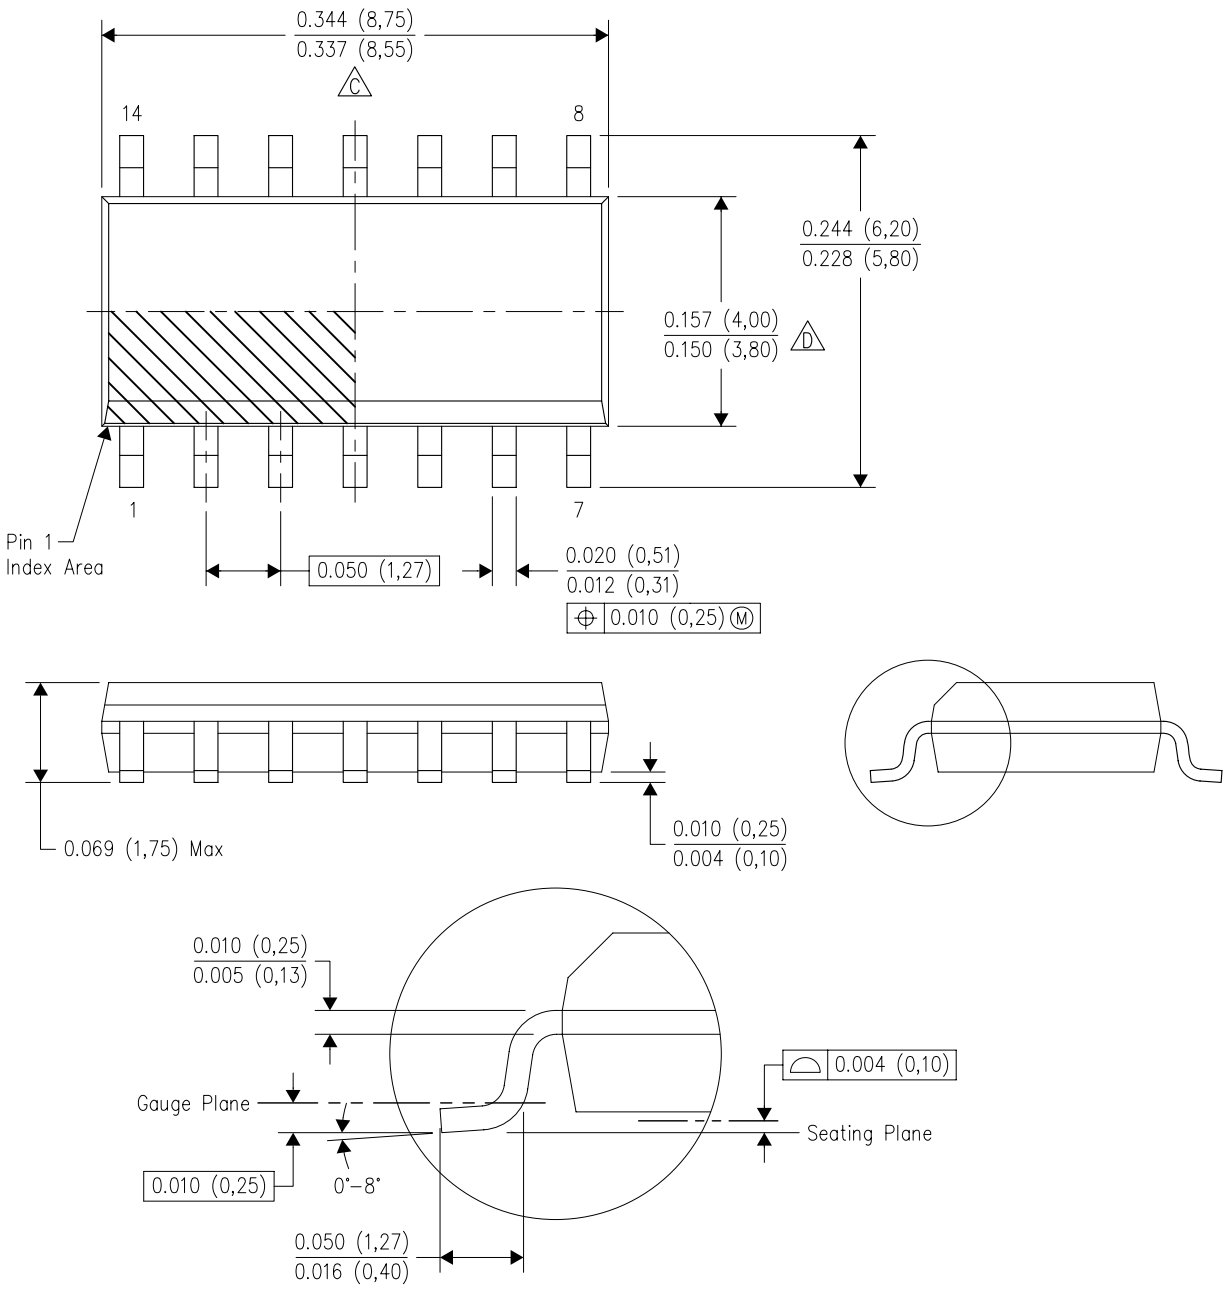
**(1)** The marketing status values are defined as follows:
**ACTIVE:** Product device recommended for new designs.
**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.
**OBSOLETE:** TI has discontinued the production of the device.

**(2)** Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
**TBD:** The Pb-Free/Green conversion plan has not been defined.
**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.
**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.
**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

**(3)** MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

D (R–PDSO–G14) PLASTIC SMALL–OUTLINE PACKAGE



NOTES:
A. All linear dimensions are in inches (millimeters).
B. This drawing is subject to change without notice.
C. Body length does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed .006 (0,15) per end.
D. Body width does not include interlead flash. Interlead flash shall not exceed .017 (0,43) per side.
E. Reference JEDEC MS–012 variation AB.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
