

TLV5734 TRIPLE 8-BIT 30-MSPS ADC WITH HIGH- PRECISION CLAMP FOR YUV/RGB VIDEO

SLES026A – APRIL 2002 – REVISED JANUARY 2003

features

- 3-Channel CMOS ADC
- Single 3.3-V Supply
- 8-Bit 30-MSPS A/D Conversion
- Very Low Power: <300 mW Typical
- Differential Linearity Error: < ± 0.5 LSB Max
- Integral Linearity Error: < ± 0.75 LSB Max
- Analog Input Voltage Range: 1 V_{pp} Max
- 64-Pin Thin QFP Package
- Analog Input Bandwidth: >130 MHz
- Selectable Clamping Function for YUV or RGB Applications
- High-Precision Clamp: ± 0.5 LSB
- Selectable Output Data Format for 4:4:4 (RGB, YUV), 4:2:2 and 4:1:1 (YUV) Format
- NTSC or PAL Compliant

applications

- Digital TV
- Digital Video
- Multimedia
- Video Capture
- Video Editing
- Security Applications

description

The TLV5734 is a triple 8-bit converter with high-precision clamp for digitizing video signals in RGB or YUV color spaces. The device supports pixel rates up to 30 MSPS. The TLV5734 is powered from a single 3.3-V supply. Separate clamping levels are provided for the RGB and YUV analog component video inputs. The clamp timing window is provided by an external pulse. The output-data formatter selects from output formats of 4:4:4, 4:1:1, and 4:2:2. For RGB applications, the 4:4:4 output format with clamp can be used. The TLV5734 is characterized for operation from -20°C to 75°C .

AVAILABLE OPTIONS

T _A	PACKAGED DEVICE
	64-PIN THIN QUAD FLATPACK
-20°C to 75°C	TLV5734PAG

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

Terminal Functions

TERMINAL NAME	NO.	I/O	TYPE†	DESCRIPTION
A AV _{CC}	62	I	A	Analog supply (3.3 V) for ADC A
AD8–AD1	6–13	O	D	Data output of ADC A (MSB:AD8, LSB:AD1) (format 1, format 2, format 3)
AGND	45	I	A	Substrate ground
A _{IN}	63	I	A	Analog input of ADC A. Used for G/Y
B AV _{CC}	55	I	A	Analog supply (3.3 V) for ADC B
BD8–BD1	17–24	O	D	Data output of ADC B (MSB:BD8, LSB:BD1) (format 2) Data output of ADC B, C (format 1, format 3)
B _{IN}	56	I	A	Analog input of ADC B. Uses for B/U
C AV _{CC}	50	I	A	Analog supply (3.3 V) for ADC C
CD8–CD1	36–43	O	D	Data output of ADC C (MSB:CD8, LSB:CD1) (format 2) When MODE1 = L, MODE0 = L, CD8 outputs MSB flag of BD8–BD5 (format 1) When MODE1 = L, MODE0 = L, CD7 outputs LSB flag of BD8–BD5 (format 1) When MODE1 = H, MODE0 = L, CD8 outputs B channel flag of BD8–BD1 (format 3) When MODE1 = H, MODE0 = L, CD7 outputs B channel flag of BD8–BD1 (CD8–CD1) (format 3)
C _{IN}	51	I	A	Analog input of ADC C. Used for R/V
CLK	31	I	D	Clock input. The clock frequency is four times the frequency subcarrier (fsc) for most video systems (see Table 3).
CLP OUT A	60	O	A	Clamp bias current of ADC A. A resistor-capacitor network sets the clamp settling time.
CLP OUT B	53	O	A	Clamp bias current of ADC B. A resistor-capacitor network sets the clamp settling time.
CLP OUT C	48	O	A	Clamp bias current of ADC C. A resistor-capacitor network sets the clamp settling time.
CLPV A	61	I	A	Clamp level of ADC A (see Table 1)
CLPV B	54	I	A	Clamp level of ADC B (see Table 1)
CLPV C	49	I	A	Clamp level of ADC C (see Table 1)
DGND	15	I	D	Digital ground for all logic
DV _{DD} ‡	26	I	D	Digital supply (3.3 V) for all logic. DV _{DD} , QA DV _{DD} , QB DV _{DD} , and QC DV _{DD} are tied together internally.
EXTCLP	3	I	D	External clamp pulse input (active high)
GND A	64	I	A	Analog ground of ADC A
GND B	57	I	A	Analog ground of ADC B
GND C	52	I	A	Analog ground of ADC C
G/Y	33	I	D	Video input mode selector, low for RGB, high for YUV
INIT	30	I	D	Output initialized. The output data is synchronized with the first falling edge of CLK after INIT changes from low to high (see Figure 1). INIT is a control terminal that allows the external system to initialize the TLV5734 data conversion cycle.
MODE1,0	28,29	I	D	Output format mode selector (see Table 4)
NC	32	I	D	NC should be tied low when using this device.
OEB A	4	I	D	Output enable of ADC A (active low)
OEB B	27	I	D	Output enable of ADC B (active low)
OEB C	34	I	D	Output enable of ADC C (active low)
QA DGND	5	I	D	Digital ground for output driver of ADC A
QA DV _{DD} ‡	14	I	D	Digital supply (3.3 V) for output driver of ADC A. DV _{DD} , QA DV _{DD} , QB DV _{DD} , and QC DV _{DD} are tied together internally.
QB DGND	25	I	D	Digital ground for output driver of ADC B

† A = analog pin, D = digital pin

‡ These pins should be driven from the same power supply.

Terminal Functions (Continued)

TERMINAL		I/O	TYPE†	DESCRIPTION
NAME	NO.			
QB DV _{DD} ‡	16	I	D	Digital supply (3.3 V) for output driver of ADC B. DV _{DD} , QA DV _{DD} , QB DV _{DD} , and QC DV _{DD} are tied together internally.
QC DGND	44	I	D	Digital ground for output driver of ADC C
QC DV _{DD} ‡	35	I	D	Digital supply (3.3 V) for output driver of ADC C. DV _{DD} , QA DV _{DD} , QB DV _{DD} , and QC DV _{DD} are tied together internally.
RB A	2	I	A	Bottom reference voltage level for ADC A
RB B	58	I	A	Bottom reference voltage level for ADC B
RB C	46	I	A	Bottom reference voltage level for ADC C
RT A	1	I	A	Top reference voltage level for ADC A (nominal RT A – RB A = 1 V for video signals)
RT B	59	I	A	Top reference voltage level for ADC B (nominal RT B – RB B = 1 V)
RT C	47	I	A	Top reference voltage level for ADC C (nominal RT C – RB C = 1 V)

† A = analog pin, D = digital pin

‡ These pins should be driven from the same power supply.

TLV5734 TRIPLE 8-BIT 30-MSPS ADC WITH HIGH- PRECISION CLAMP FOR YUV/RGB VIDEO

SLES026A – APRIL 2002 – REVISED JANUARY 2003

detailed description

ADC

The TLV5734 includes three 8-bit A/D channels. Each ADC employs a three-stage switched capacitor-pipelined architecture to achieve high accuracy and high throughput with low power consumption. The analog input is sampled when the external clock, CLK, goes from low to high. The INIT signal is used to initialize the order of output data when operating in the 4:2:2 or 4:1:1 output format mode. After INIT changes from low to high, the first reinitialized output data is available after a 5-clock-cycle delay from the rising edge of the CLK (see the timing diagram, Figure 1).

Pulling the OEB pin (pin 4, 27 or 34) high puts the corresponding ADC output in the high-impedance state.

Figure 1. Timing Diagram

detailed description (continued)

clamp function

The TLV5734 employs a clamp feedback circuit on each channel to correct the clamp level mismatch contributed by the offset of each channel. The clamp levels are used for either the YUV or RGB video signal. Figure 2 shows the clamp circuit and the external R and C required for the clamp operation. The clamp circuit also requires an externally generated active-high clamp pulse to be applied to input EXTCLP. The clamp pulse defines the timing window during which the clamp circuit is enabled. For video applications, the clamp pulse must be applied during the back porch of the sync portion of the horizontal blanking interval. For an embedded sync video input (G/Y), the external clamp high must start after the gap A between sync and clamp start (see Figure 3 and Table 3).

The clamp is enabled by applying a logic high on the EXTCLP input. This closes switch SW1 and enables the digital comparator. The output of the ADC is then compared digitally with the preset clamp level (as defined in Table 1), then the voltage on clamp capacitor C2 is charged/discharged through the 3-state buffer and resistor R to make the ADC output equal to the desired clamp level. Once the desired clamp level is attained, the 3-state buffer is put in the high-impedance mode and the clamp voltage is stored on input capacitor C1 until the next clamp pulse.

Figure 2. Clamp Feedback Circuit

Table 1. Preset Clamp Level

ADC CHANNEL	YUV (G/Y = HIGH)		RGB (G/Y = LOW)	
	OUTPUT CODE	APPLICATION	OUTPUT CODE	APPLICATION

B (Min.)	16 clocks (1.12 μs)	16 clocks (0.90 μs)	32 clocks (1.19 μs)

output data format

The TLV5734 can select three output data formats for different video data processing by the combination of MODE0 and MODE1 (see Table 4). The output is synchronous with the rising edge of CLK that comes after INIT is pulled high. Timing diagrams and output data tables for formats 1, 2, and 3 are shown in Figure 4 through Figure 6 and Table 5 through Table 7.

Table 4. Output Data Format Selection

CONDITION		OUTPUT DATA	
MODE 1	MODE 0	OUTPUT DATA FORMAT	RATIO OF Y:U:V
L	L	Format 1	4:1:1
L	H	Format 2	4:4:4
H	L	Format 3	4:2:2
H	H	Not used	N/A

Supply current	$f_S = 30\text{ MSPS}$, NTSC ramp wave input	73	82	91	mA
Power dissipation	$f_S = 30\text{ MSPS}$, NTSC ramp wave input	240	270	300	mW

operating characteristics $V_{DD} = V_{CC} = 3.3\text{ V}$, $V_{ref(RT)} = 2.0\text{ V}$, $V_{ref(RB)} = 1.0\text{ V}$, $f(\text{CLK}) = 30\text{ MHz}$, $T_A = -20^\circ\text{C to } 75^\circ\text{C}$ (unless otherwise noted)

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT		
DNL	Differential nonlinearity	$f_S = 30\text{ MSPS}$		±0.2	±0.5	LSB	
INL	Integral nonlinearity	$f_S = 30\text{ MSPS}$		±0.3	±0.75	LSB	
f_S	Maximum conversion rate	30			MSPS		
BW	Analog input bandwidth	At -3 dB, $T_A = 25^\circ\text{C}$		130	MHz		
t_{pd}	Digital output delay time	$C_L = 10\text{ pF}$ (by design)		18	ns		
	Zero-scale error	$V_{ref} = REFT - REFB = 1\text{ V}$		-16	-2	15	mV
	Full-scale error	$V_{ref} = REFT - REFB = 1\text{ V}$		-13	2	17	mV
	Sampling delay time	By design		4.3		ns	

TLV5734
**TRIPLE 8-BIT 30-MSPS ADC WITH HIGH-
PRECISION CLAMP FOR YUV/RGB VIDEO**

PACKAGING INFORMATION

Orderable Device	Status ⁽¹⁾	Package Type	Package Drawing	Pins	Package Qty	Eco Plan ⁽²⁾	Lead/Ball Finish	MSL Peak Temp ⁽³⁾
TLV5734PAG	ACTIVE	TQFP	PAG	64	160	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-4-260C-72 HR
TLV5734PAGG4	ACTIVE	TQFP	PAG	64	160	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-4-260C-72 HR

⁽¹⁾ The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBsolete: TI has discontinued the production of the device.

⁽²⁾ Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

⁽³⁾ MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

Important Information and Disclaimer:The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
