

100EL11 5V ECL 1:2 Differential Fanout Buffer

General Description

The 100EL11 is a 5V 1:2 differential fanout buffer. One differential input signal is fanned out to two identical differential outputs. By supplying a constant reference level to one input pin a single ended input condition is created.

With inputs open or both inputs at V_{EE} the differential Q outputs default LOW and \bar{Q} outputs default HIGH.

The 100 series is temperature compensated.
