

CDCV857

2.5-V PHASE LOCK LOOP CLOCK DRIVER

SCAS645A – AUGUST 2000 – REVISED OCTOBER 2000

- Phase-Lock Loop Clock Driver for Double Data-Rate Synchronous DRAM Applications
- Spread Spectrum Clock Compatible
- Operating Frequency: 60 to 200 MHz
- Low Jitter (cyc–cyc): ± 75 ps
- Distributes One Differential Clock Input to Ten Differential Outputs
- Three-State Outputs When the Input Differential Clocks Are < 20 MHz
- Operates From Dual 2.5-V Supplies
- 48-Pin TSSOP Package
- Consumes < 200 - μ A Quiescent Current
- External Feedback PIN ($\overline{\text{FBIN}}$, $\overline{\text{FBIN}}$) Are Used to Synchronize the Outputs to the Input Clocks

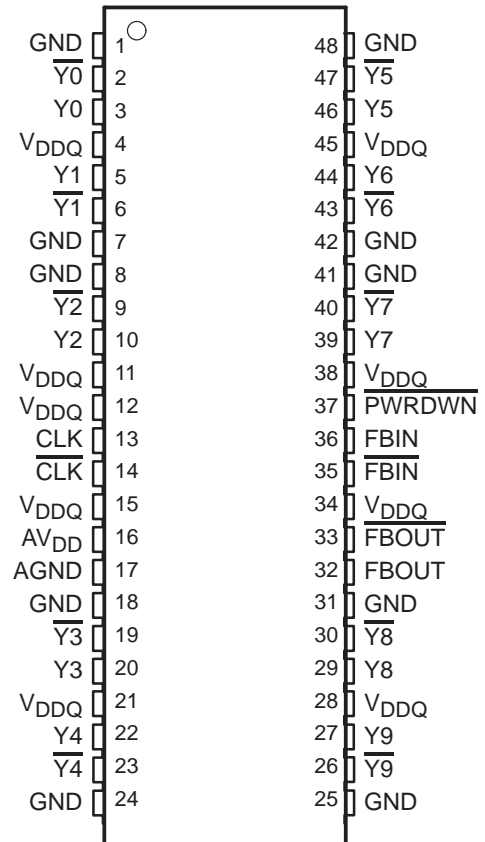

description

The CDCV857 is a high-performance, low-skew, low-jitter zero delay buffer that distributes a differential clock input pair (CLK, $\overline{\text{CLK}}$) to ten differential pairs of clock outputs (Y[0:9], $\overline{\text{Y}}[0:9]$) and one differential pair of feedback clock output (FBOUT, $\overline{\text{FBOUT}}$). The clock outputs are controlled by the clock inputs (CLK, $\overline{\text{CLK}}$), the feedback clocks (FBIN, $\overline{\text{FBIN}}$), and the analog power input (AV_{DD}). When $\overline{\text{PWRDWN}}$ is high, the outputs switch in phase and frequency with CLK. When $\overline{\text{PWRDWN}}$ is low, all outputs are disabled to high impedance state (3-state), and the PLL is shut down (low power mode). The device also enters this low power mode when the input frequency falls below a suggested detection frequency that is below 20 MHz (typical 10 MHz). An input frequency detection circuit will detect the low frequency condition and after applying a > 20 MHz input signal this detection circuit turns on the PLL again and enables the outputs.

When AV_{DD} is strapped low, the PLL is turned off and bypassed for test purposes. The CDCV857 is also able to track spread spectrum clocking for reduced EMI.

Since the CDCV857 is based on PLL circuitry, it requires a stabilization time to achieve phase-lock of the PLL. This stabilization time is required following power up. The CDCV857 is characterized for operation from 0°C to 85°C .

functional block diagram

Terminal Functions

TERMINAL NAME	NO.	I/O	DESCRIPTION
AGND	17		Ground for 2.5-V analog supply
AV _{DD}	16		2.5-V Analog supply
CLK, $\overline{\text{CLK}}$	13, 14	I	Differential clock input
$\overline{\text{FBIN}}$, FBIN	35, 36	I	Feedback differential clock input
F _{OUT} , $\overline{\text{FOUT}}$	32, 33	O	Feedback differential clock output
GND	1, 7, 8, 18, 24, 25, 31, 41, 42, 48		Ground
$\overline{\text{PWRDWN}}$	37	I	Output enable for Y and $\overline{\text{Y}}$
V _{DDQ}	4, 11, 12, 15, 21, 28, 34, 38, 45		2.5-V Supply
Y[0:9]	3, 5, 10, 20, 22, 27, 29, 39, 44, 46	O	Buffered output copies of input clock, CLK
$\overline{\text{Y}}$ [0:9]	2, 6, 9, 19, 23, 26, 30, 40, 43, 47	O	Buffered output copies of input clock, $\overline{\text{CLK}}$

absolute maximum ratings over operating free-air temperature (unless otherwise noted)[†]

Supply voltage range, V _{DDQ} , AV _{DD}	0.5 V to 3.6 V
Input voltage range, V _I (see Notes 1 and 2)	–0.5 V to V _{DDQ} 0.5 V
Output voltage range, V _O (see Notes 1 and 2)	–0.5 V to V _{DDQ} 0.5 V
Input clamp current, I _{IK} (V _I < 0 or V _I > V _{DDQ})	±50 mA
Output clamp current, I _{OK} (V _O < 0 or V _O > V _{DDQ})	±50 mA
Continuous output current, I _O (V _O = 0 to V _{DDQ})	±50 mA
Continuous current to GND or V _{DDQ}	±100 mA
Package thermal impedance, θ_{JA} (see Note 3): DGG package	89°C/W
Storage temperature range T _{stg}	–65°C to 150°C

[†] Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

- NOTES:
1. The input and output negative voltage ratings may be exceeded if the input and output clamp-current ratings are observed.
 2. This value is limited to 3.6 V maximum.
 3. The package thermal impedance is calculated in accordance with JESD 51.

CDCV857

2.5-V PHASE LOCK LOOP CLOCK DRIVER

SCAS645A – AUGUST 2000 – REVISED OCTOBER 2000

recommended operating conditions (see Note 4)

		MIN	TYP	MAX	UNIT
Supply voltage, V_{DDQ} , AV_{DD}		2.3		2.7	V
Low level input voltage, V_{IL}	CLK, $\overline{\text{CLK}}$, FBIN, $\overline{\text{FBIN}}$			$V_{DDQ}/2 - 0.18$	V
	PWRDWN	-0.3		0.7	
High level input voltage, V_{IH}	CLK, $\overline{\text{CLK}}$, FBIN, $\overline{\text{FBIN}}$	$V_{DDQ}/2 + 0.18$			V
	PWRDWN	1.7		$V_{DDQ} + 0.3$	
DC input signal voltage (see Note 5)		-0.3		V_{DDQ}	V
Differential input signal voltage, V_{ID} (see Note 6)	DC CLK, FBIN	0.36		$V_{DDQ} + 0.6$	V
	AC CLK, FBIN	0.7		$V_{DDQ} + 0.6$	
Output differential cross-voltage, V_{OX} (see Note 7)		$V_{DDQ}/2 - 0.2$	$V_{DDQ}/2$	$V_{DDQ}/2 + 0.2$	V
Input differential pair cross-voltage, V_{IX} (see Note 7)		$V_{DDQ}/2 - 0.2$		$V_{DDQ}/2 + 0.2$	V
High-level output current, I_{OH}				-12	mA
Low-level output current, I_{OL}				12	mA
Input slew rate, SR		1		4	V/ns
Operating free-air temperature, T_A		0		85	°C

- NOTES:
4. Unused inputs must be held high or low to prevent them from floating.
 5. DC input signal voltage specifies the allowable dc execution of differential input.
 6. Differential input signal voltage specifies the differential voltage $|V_{TR} - V_{CP}|$ required for switching, where V_{TR} is the true input level and V_{CP} is the complementary input level.
 7. Differential cross-point voltage is expected to track variations of V_{CC} and is the voltage at which the differential signals must be crossing.

electrical characteristics over recommended operating free-air temperature range (unless otherwise noted)

PARAMETER			TEST CONDITIONS	MIN	TYP†	MAX	UNIT
V _{IK}	Input voltage	All inputs	V _{DDQ} = 2.3 V, I _I = -18 mA			-1.2	V
V _{OH}	High-level output voltage		V _{DDQ} = min to max, I _{OH} = -1 mA	V _{DDQ} - 0.1			V
			V _{DDQ} = 2.3 V, I _{OH} = -12 mA	1.7			
V _{OL}	Low-level output voltage		V _{DDQ} = min to max, I _{OL} = 1 mA			0.1	V
			V _{DDQ} = 2.3 V, I _{OL} = 12 mA			0.6	
I _{OH}	High-level output current		V _{DDQ} = 2.3 V, V _O = 1 V	-18	-32		mA
I _{OL}	Low-level output current		V _{DDQ} = 2.3 V, V _O = 1.2 V	26	35		mA
V _O	Output voltage swing		Differential outputs are terminated with 120 Ω	1.1		V _{DDQ} - 0.4	V
V _{OX}	Output differential cross-voltage§			V _{DDQ} /2 - 0.2	V _{DDQ} /2	V _{DDQ} /2 + 0.2	
I _I	Input current		V _{DDQ} = 2.7 V, V _I = 0 V to 2.7 V			±10	μA
I _{OZ}	High-impedance-state output current		V _{DDQ} = 2.7 V, V _O = V _{DDQ} or GND			±10	μA
I _{DDPD}	Power down current on V _{DDQ} + AV _{DD}		CLK and $\overline{\text{CLK}}$ = 0 MHz; $\overline{\text{PWRDWN}}$ = Low; Σ of I _{DD} and AI _{DD}		100	200	μA
I _{DD}	Dynamic current on V _{DDQ}	all outputs loaded as shown in Figure 3	f _O = 200 MHz		275	330	mA
			f _O = 167 MHz		250	300	
AI _{DD}	Supply current on AV _{DD}		f _O = 200 MHz		10	12	mA
			f _O = 167 MHz		8	10	
C _I	Input capacitance		V _{CC} = 2.5 V V _I = V _{CC} or GND	2	2.5	3	pF
C _O	Output capacitance		V _{CC} = 2.5 V V _O = V _{CC} or GND	2.5	3	3.5	pF

† All typical values are at respective nominal V_{DDQ}.

‡ The value of V_{OC} is expected to be |V_{TR} + V_{CPI}|/2. In case of each clock directly terminated by a 120-Ω resistor, where V_{TR} is the true input signal voltage and V_{CPI} is the complementary input signal voltage.

§ Differential cross-point voltage is expected to track variations of V_{DDQ} and is the voltage at which the differential signals must be crossing.

timing requirements over recommended ranges of supply voltage and operating free-air temperature

		MIN	MAX	UNIT
f _{CK}	Operating clock frequency	60	200	MHz
	Application clock frequency			
Input clock duty cycle		40%	60%	
Stabilization time¶ (PLL mode)			10	μs
Stabilization time¶ (Bypass mode)			30	ns

¶ Time required for the integrated PLL circuit to obtain phase lock of its feedback signal to its reference signal. For phase lock to be obtained, a fixed-frequency, fixed-phase reference signal must be present at CLK. Until phase lock is obtained, the specifications for propagation delay, skew, and jitter parameters given in the switching characteristics table are not applicable. This parameter does not apply for input modulation under SSC application.

⁽¹⁾ The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

⁽²⁾ Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS) or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

⁽³⁾ MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

Important Information and Disclaimer:The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
