

Features

- Clock doubler
- High-Performance Phase-Locked-Loop Clock Distribution for Networking, ATM, 100 MHz and 134 MHz Registered DIMM Synchronous DRAM modules for server, workstation, and PC applications
- Zero Input-to-Output delay
- Cycle-to-Cycle jitter $\leq \pm 150\text{ps}$ max.
- On-chip series damping resistor at clock output drivers for low noise and EMI reduction
- Operates at 3.3V V_{CC}
- Packaging (Pb-free & Green available):
 - 8-pin SOIC Package (W)

Description

The PI6C2402 features a low-skew, low-jitter, Phase-Locked Loop (PLL) clock driver. By connecting the feedback CLK_OUT output to the feedback FB_IN input, the propagation delay from the CLK_IN input to any clock output will be nearly zero. The PI6C2402 provides 2X CLK_IN on CLK_OUT output.

Applications

If the system designer needs more than 16 outputs with the features just described, using two or more zero-delay buffers such as the PI6C2509, and the PI6C2510, are likely to be impractical. The device-to-device skew introduced can significantly reduce the performance. Pericom recommends the use of a zero-delay buffer and an eighteen output non-zero-delay buffer. As shown in Figure 1, this combination produces a zero-delay buffer with all the signal characteristics of the original zero-delay buffer, but with as many outputs as the non-zero-delay buffer part. For example, when combined with an eighteen output non-zero delay buffer, a system designer can create a seventeen-output zero-delay buffer.

Pin Functions

Name	Number	Type	Description
CLK_IN	1	I	Reference Clock input, CLK_IN allows spread spectrum clock input
AVCC	2	Power	Analog Power
AGND	3	Ground	Analog Ground
CLK_OUT	4	O	Clock Output. The output provides low-skew copies of CLK_IN and has an embedded series-damping resistor.
S	5	I	Control Input S. S is used to bypass the PLL for test purposes. When S is strapped to ground, PLL is bypassed and CLK_IN is buffered directly to the device outputs
GND	6	Ground	Ground
VCC	7	Power	Power Supply
FB_IN	8	I	Feedback input. FB_IN provides the feedback signal to the internal PLL.
