

DAC1003D160

Dual 10 bits DAC, up to 160 MHz, 2 x interpolation

Rev. 02 — 13 August 2008

Product data sheet

1. General description

The DAC1003D160 is optimized to reduce architecture complexity and overall system cost. The Digital-to-Analog Converter (DAC) leads dynamic performance in multi-carrier support because of its direct IF conversion capabilities. With an internal sampling rate up to 160 MHz, the DAC1003D160 is an extremely competitive solution for broadband wireless systems transmitters, as well as a wide range of applications.

2. Features

- Dual 10-bit resolution
- Spurious Free Dynamic Range (SFDR) = 80 dBc at 2.5 MHz
- Input data rate up to 80 MHz
- 2 × interpolation filter
- Output data rate up to 160 Mhz
- Single 3.3 V power supply
- Low noise capacitor free integrated Phase-Locked Loop (PLL)
- Low power dissipation
- HTQFP80 package
- Ambient temperature from -40 °C to +85 °C

3. Applications

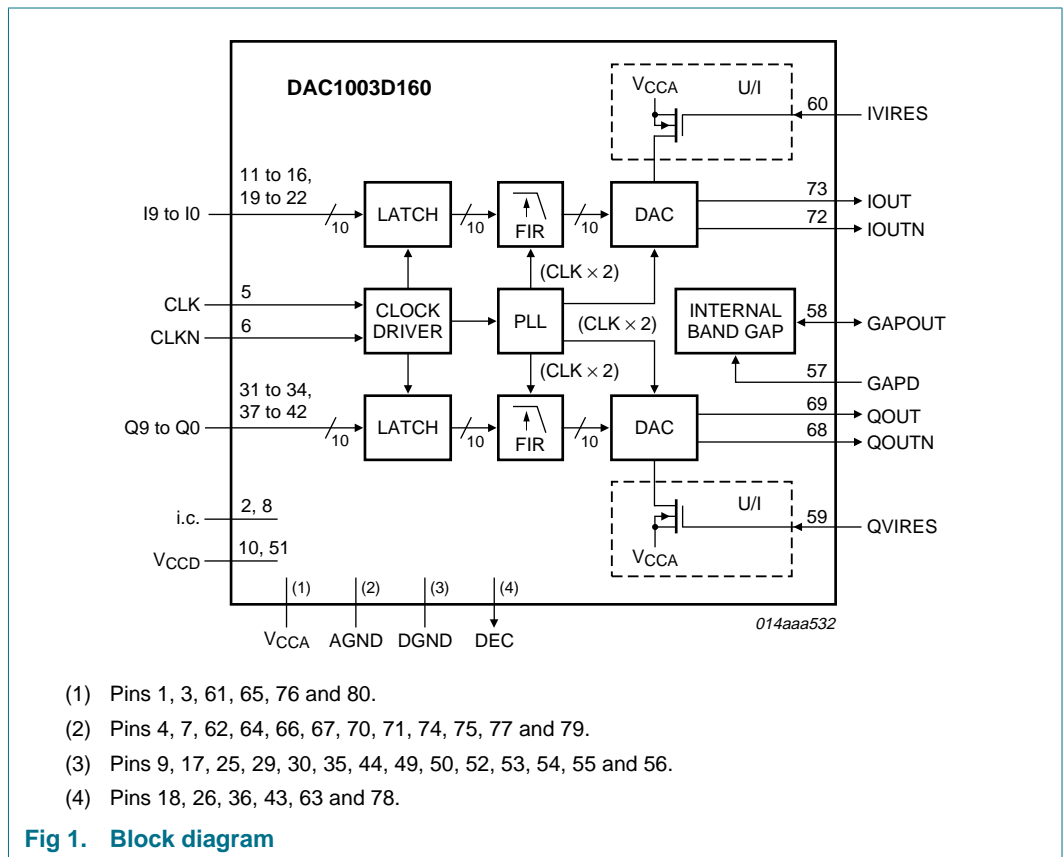

- Broadband wireless systems
- Digital radio links
- Cellular base stations
- Instrumentation
- Cable modems
- Cable Modem Termination System (CMTS)/Data Over Cable Service Interface Specification (DOCSIS)

[1] Type description: S: Supply; G: Ground; I: Input; O: Output.

7. Functional description

The DAC1003D160 is a segmented architecture composed of a 7-bit thermometer sub-DAC and the remaining 3-bit in a binary weighted sub-DAC.

The device produces two complementary current outputs on both channels, respectively pins IOUT/IOUTN and QOUT/QOUTN which need to be connected via a load resistor to the ground.

[Figure 3](#) shows the equivalent analog output circuit of one DAC, which consists of a parallel combination of PMOS current sources and associated switches for each segment.

The cascade source configuration enables the increase of the output impedance of the source and the improvement of the dynamic performance of the DAC by introducing less distortion.

[Figure 4](#) shows the internal reference configuration. In this case the bias current is given by the output of the internal regulator connected to the inverting input of the internal operational amplifiers, while external resistors R_I and R_Q are connected respectively to pins IVIRES and QVIRES. Thus the output current of the two DACs is typically fixed to 20 mA with an appropriate choice of these resistors. This configuration is optimal for temperature drift compensation because the band gap can be matched with the voltage on the feedback resistors.

The relation between full-scale output current $I_{O(fs)}$ and the R_I (R_Q) is:

$$R_I = \frac{2048 \times V_{GAPOUT}}{82 \times I_{O(FS)}} \Omega$$

The output current can also be adjusted by imposing an external reference voltage to the inverting input pin GAPOUT and disabling the internal band gap with pin GAPD set to HIGH. At a voltage lower than 1.2 V the current can be set at values lower than 20 mA. The input references at pins IVIRES and QVIRES may also be driven by separate reference voltages to adjust independently the two DAC currents.

Fig 3. Equivalent analog output circuit

Fig 4. Internal reference configuration

8. Limiting values

Table 3. Limiting values

In accordance with the Absolute Maximum Rating System (IEC 60134).

Symbol	Parameter	Conditions	Min	Max	Unit
V_{CCD}	digital supply voltage		[1] -0.3	+3.9	V
V_{CCA}	analog supply voltage		[1] -0.3	+3.9	V
ΔV_{CC}	supply voltage difference	between the analog and digital supply voltages	-150	+150	mV
V_I	input voltage	pins Qn and In referenced to DGND	-0.3	$V_{CCD} + 0.3$	V
		pins IVIRES, QVIRES, GAPD, CLK and CLKN referenced to AGND	-0.3	$V_{CCA} + 0.3$	V
V_O	output voltage	pins IOUT, IOUTN, QOUT and QOUTN referenced to DAGND	-0.3	$V_{CCA} + 0.3$	V
T_{stg}	storage temperature		-55	+150	°C
T_{amb}	ambient temperature		-40	+85	°C
T_j	junction temperature		-	125	°C

[1] All supplies are connected together.

9. Thermal characteristics

Table 4. Thermal characteristics

Symbol	Parameter	Conditions	Typ	Unit
$R_{th(j-a)}$	thermal resistance from junction to ambient	in free air	27.1	K/W
$R_{th(c-a)}$	thermal resistance from case to ambient	in free air	11.8	K/W

10. Characteristics

Table 5. Characteristics

$V_{CCD} = V_{CCA} = 3.0\text{ V to }3.6\text{ V}$; AGND and DGND connected together; $T_{amb} = -40\text{ °C to }+85\text{ °C}$; typical values measured at $V_{CCD} = V_{CCA} = 3.3\text{ V}$, $I_{O(fs)} = 20\text{ mA}$ and $T_{amb} = 25\text{ °C}$; dynamic parameters measured using output schematic given in [Figure 10](#); unless otherwise specified.

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
Supplies						
V_{CCD}	digital supply voltage		3.0	3.3	3.6	V
V_{CCA}	analog supply voltage		3.0	3.3	3.6	V
I_{CCD}	digital supply current		-	55	65	mA

Table 5. Characteristics ...continued

$V_{CCD} = V_{CCA} = 3.0\text{ V to }3.6\text{ V}$; AGND and DGND connected together; $T_{amb} = -40\text{ }^{\circ}\text{C to }+85\text{ }^{\circ}\text{C}$; typical values measured at $V_{CCD} = V_{CCA} = 3.3\text{ V}$, $I_{O(fs)} = 20\text{ mA}$ and $T_{amb} = 25\text{ }^{\circ}\text{C}$; dynamic parameters measured using output schematic given in [Figure 10](#); unless otherwise specified.

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
I_{CCA}	analog supply current		-	73	85	mA
P_{tot}	total power dissipation	$f_{clk} = 80\text{ MHz}$; $f_{IOUT} = f_{QOUT} = 5\text{ MHz}$	-	422	540	mW
Clock inputs (CLK and CLKN)						
$V_{I(cm)}$	common-mode input voltage		-	1.65	-	V
$V_{i(dif)(p-p)}$	peak-to-peak differential input voltage		-	1.0	-	V
Analog outputs (IOUT, IOUTN, QOUT and QOUTN)						
$I_{O(fs)}$	full-scale output current	differential outputs	4	-	20	mA
R_o	output resistance		[1]	150	-	k Ω
C_o	output capacitance		[1]	3	-	pF
Digital inputs (I0 to I9, Q0 to Q9 and GAPD)						
V_{IL}	LOW-level input voltage		DGND	-	$0.3 V_{CCD}$	V
V_{IH}	HIGH-level input voltage		$0.7 V_{CCD}$	-	V_{CCD}	V
I_{IL}	LOW-level input current	$V_{IL} = 0.3 V_{CCD}$	-	5	-	μA
I_{IH}	HIGH-level input current	$V_{IH} = 0.7 V_{CCD}$	-	5	-	μA
Reference voltage output (GAPOUT)						
V_{GAPOUT}	voltage on pin GAPOUT		-	1.31	-	V
I_{GAPOUT}	current on pin GAPOUT	external voltage	-	1	-	μA
ΔV_{GAPOUT}	voltage variation on pin GAPOUT		-	± 133	-	ppm/ $^{\circ}\text{C}$
Clock timing inputs (CLK and CLKN)						
f_{clk}	clock frequency			-	80	MHz
$t_{w(clk)H}$	HIGH clock pulse width		5	-	-	ns
$t_{w(clk)L}$	LOW clock pulse width		5	-	-	ns
Input timing (I0 to I9 and Q0 to Q9); see Figure 5						
$t_{h(i)}$	input hold time		1.1	-	3.4	ns
$t_{su(i)}$	input set-up time		-1.5	-	+0.7	ns
Output timing (IOUT, IOUTN, QOUT, QOUTN)						
t_s	settling time	$t_o \pm 0.5\text{ LSB}$	[1]	16	-	ns
Digital filter specification (FIR); order N = 42 see Figure 6 and 7 and Table 7						
f_{data}	data rate		-	-	80	MHz
$\alpha_{ripple(pb)}$	pass-band ripple	f_{data}/f_{clk} ; 0.005 dB attenuation	-	0.405	-	
B_p	power bandwidth	f_{data}/f_{clk} ; 3 dB attenuation	-	0.479	-	
α_{stpb}	stop-band attenuation	$f_{data}/f_{clk} = 0.6\text{ dB to }1\text{ dB}$	-	69	-	dB
$t_{d(grp)}$	group delay time		-	$11 T_{clk}$	-	ns
Analog signal processing						
INL	integral non-linearity		-	± 0.2	-	LSB
DNL	differential non-linearity		-	± 0.1	-	LSB

14. Glossary

14.1 Static parameters

DNL — Differential Non-Linearity. The difference between the ideal and the measured output value between successive DAC codes.

INL — Integral Non-Linearity. The deviation of the transfer function from a best-fit straight line (linear regression computation).

14.2 Dynamic parameters

IMD2 — Second-order intermodulation distortion. From a dual-tone digital input sine wave (these two frequencies are close together), the intermodulation distortion product IMD2 is the ratio of the RMS value of either tone and the RMS value of the worst 2nd-order intermodulation product.

IMD3 — Third-order intermodulation distortion. From a dual-tone digital input sine wave (these two frequencies are close together), the intermodulation distortion product IMD3 is the ratio of the RMS value of either tone and the RMS value of the worst 3rd-order intermodulation product.

SFDR — Spurious Free Dynamic Range. The ratio between the RMS value of the reconstructed output sine wave and the RMS value of the largest spurious observed (harmonic and non-harmonic, excluding DC component) in the frequency domain.

S/N — Signal-to-Noise ratio. The ratio of the RMS value of the reconstructed output sine wave to the RMS value of the noise excluding the harmonics and the DC component.

THD — Total Harmonic Distortion. The ratio of the RMS value of the harmonics of the output frequency to the RMS value of the output sine wave. Usually, the calculation of THD is done on the first 5 harmonics.

Document status ^{[1][2]}	Product status ^[3]	Definition
Objective [short] data sheet	Development	This document contains data from the objective specification for product development.
Preliminary [short] data sheet	Qualification	This document contains data from the preliminary specification.
Product [short] data sheet	Production	This document contains the product specification.

[1] Please consult the most recently issued document before initiating or completing a design.

[2] The term 'short data sheet' is explained in section "Definitions".

[3] The product status of device(s) described in this document may have changed since this document was published and may differ in case of multiple devices. The latest product status information is available on the Internet at URL <http://www.nxp.com>.

16.2 Definitions

Draft — The document is a draft version only. The content is still under internal review and subject to formal approval, which may result in modifications or additions. NXP Semiconductors does not give any representations or warranties as to the accuracy or completeness of information included herein and shall have no liability for the consequences of use of such information.

Short data sheet — A short data sheet is an extract from a full data sheet with the same product type number(s) and title. A short data sheet is intended for quick reference only and should not be relied upon to contain detailed and full information. For detailed and full information see the relevant full data sheet, which is available on request via the local NXP Semiconductors sales office. In case of any inconsistency or conflict with the short data sheet, the full data sheet shall prevail.

16.3 Disclaimers

General — Information in this document is believed to be accurate and reliable. However, NXP Semiconductors does not give any representations or warranties, expressed or implied, as to the accuracy or completeness of such information and shall have no liability for the consequences of use of such information.

Right to make changes — NXP Semiconductors reserves the right to make changes to information published in this document, including without limitation specifications and product descriptions, at any time and without notice. This document supersedes and replaces all information supplied prior to the publication hereof.

Suitability for use — NXP Semiconductors products are not designed, authorized or warranted to be suitable for use in medical, military, aircraft, space or life support equipment, nor in applications where failure or

malfunction of an NXP Semiconductors product can reasonably be expected to result in personal injury, death or severe property or environmental damage. NXP Semiconductors accepts no liability for inclusion and/or use of NXP Semiconductors products in such equipment or applications and therefore such inclusion and/or use is at the customer's own risk.

Applications — Applications that are described herein for any of these products are for illustrative purposes only. NXP Semiconductors makes no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

Limiting values — Stress above one or more limiting values (as defined in the Absolute Maximum Ratings System of IEC 60134) may cause permanent damage to the device. Limiting values are stress ratings only and operation of the device at these or any other conditions above those given in the Characteristics sections of this document is not implied. Exposure to limiting values for extended periods may affect device reliability.

Terms and conditions of sale — NXP Semiconductors products are sold subject to the general terms and conditions of commercial sale, as published at <http://www.nxp.com/profile/terms>, including those pertaining to warranty, intellectual property rights infringement and limitation of liability, unless explicitly otherwise agreed to in writing by NXP Semiconductors. In case of any inconsistency or conflict between information in this document and such terms and conditions, the latter will prevail.

No offer to sell or license — Nothing in this document may be interpreted or construed as an offer to sell products that is open for acceptance or the grant, conveyance or implication of any license under any copyrights, patents or other industrial or intellectual property rights.
