SLLS059D – FEBRUARY 1990 – REVISED MAY 1999

- **Meet or Exceed the Requirements of ANSI Standards TIA/EIA-422-B and TIA/EIA-485-A and ITU Recommendations V.10 and V.11**
- **Designed for Multipoint Bus Transmission on Long Bus Lines in Noise Environments**
- **Driver Positive- and Negative-Current Limiting**
- **Thermal Shutdown Protection**
- **Driver 3-State Outputs**
- **Receiver Common-Mode Input Voltage Range of –12 V to 12 V**
- **Receiver Input Sensitivity . . . ±200 mV**
- **Receiver Hysteresis . . . 50 mV Typ**
- **Receiver Input Impedance . . . 12 kΩ Min**
- **Receiver 3-State Outputs (SN751177 Only)**
- **Operate From Single 5-V Supply**

† The NS package is only available taped and reeled.

description

The SN751177 and SN751178 dual differential drivers and receivers are monolithic integrated circuits that are designed for balanced multipoint bus transmission at rates up to 10 Mbit/s. They are designed to improve the performance of full-duplex data communications over long bus lines and meet ANSI Standards TIA/EIA-422-B and TIA/EIA-485-A and ITU Recommendations V.10 and V.11.

The SN751177 and SN751178 driver outputs provide limiting for both positive and negative currents and thermal-shutdown protection from line-fault conditions on the transmission bus line.

The receiver features high input impedance of at least 12 kΩ, an input sensitivity of ±200 mV over a common-mode input voltage range of –12 V to 12 V, and typical input hysteresis of 50 mV. Fail-safe design ensures that if the receiver inputs are open, the receiver outputs always will be high.

The SN751177 and SN751178 are characterized for operation from –20°C to 85°C.

Function Tables

SN751177, SN751178
(each driver)

INPUT D	ENABLE DE	OUTPUTS	
		Y	Z
H	H	H	L
L	H	L	H
X	L	Z	Z

H = high level, L = low level, X = irrelevant,
Z = high impedance (off)

SN751177
(each receiver)

DIFFERENTIAL INPUTS A – B	ENABLE $\overline{RE}$	OUTPUT R
$V_{ID} \geq 0.2$ V	L	H
–0.2 V < V_{ID} < 0.2 V	L	?
$V_{ID} \leq$ –0.2 V	L	L
X	H	Z
Open	L	H

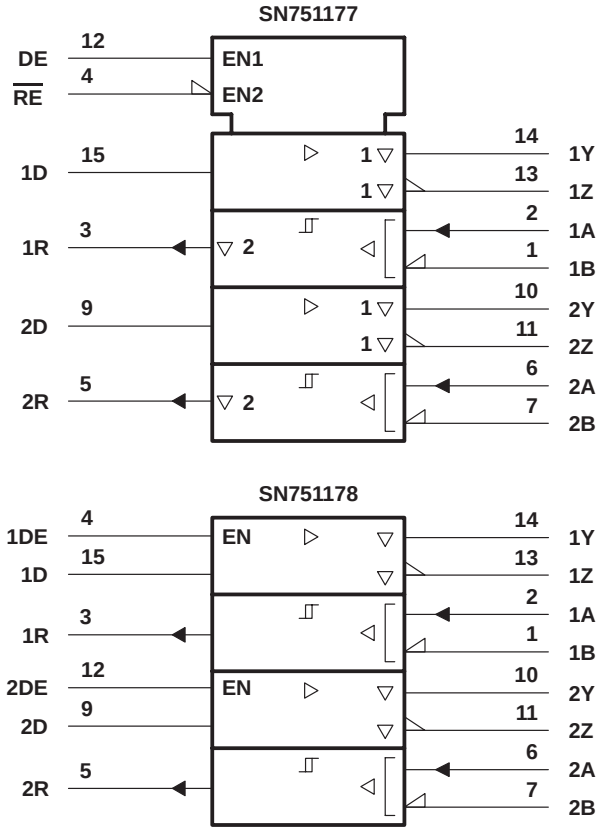
H = high level, L = low level, ? = indeterminate,
X = irrelevant, Z = high impedance (off)

SN751178
(each receiver)

DIFFERENTIAL INPUTS A – B	OUTPUT R
$V_{ID} \geq 0.2$ V	H
–0.2 V < V_{ID} < 0.2 V	?
$V_{ID} \leq$ –0.2 V	L

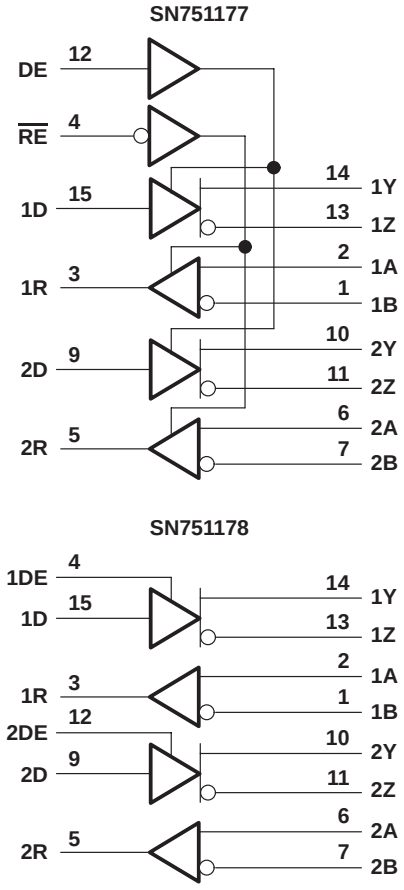
H = high level, L = low level,
? = indeterminate

logic symbols†

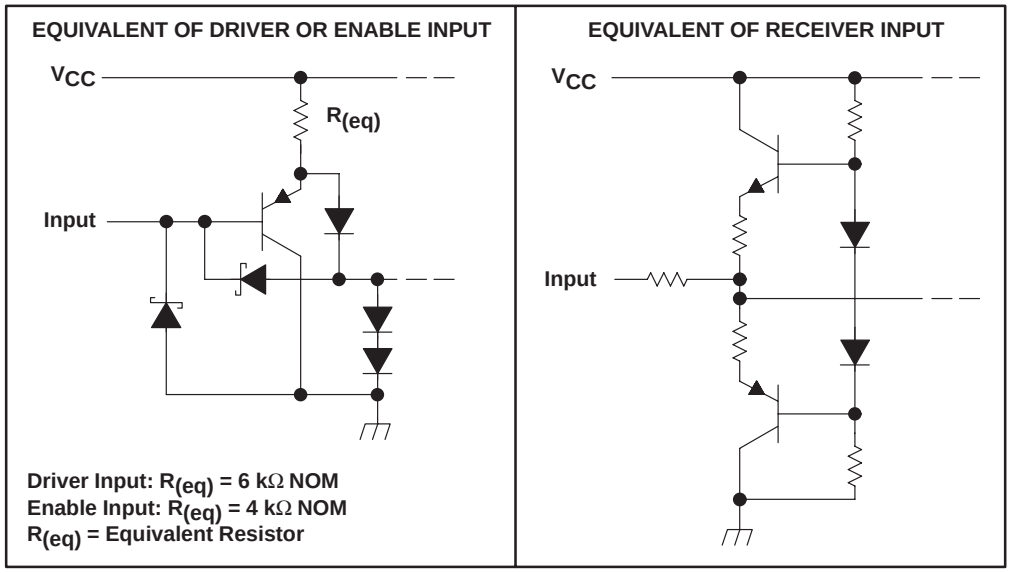


† These symbols are in accordance with ANSI/IEEE Std 91-1984 and IEC Publication 617-12.

logic diagrams (positive logic)

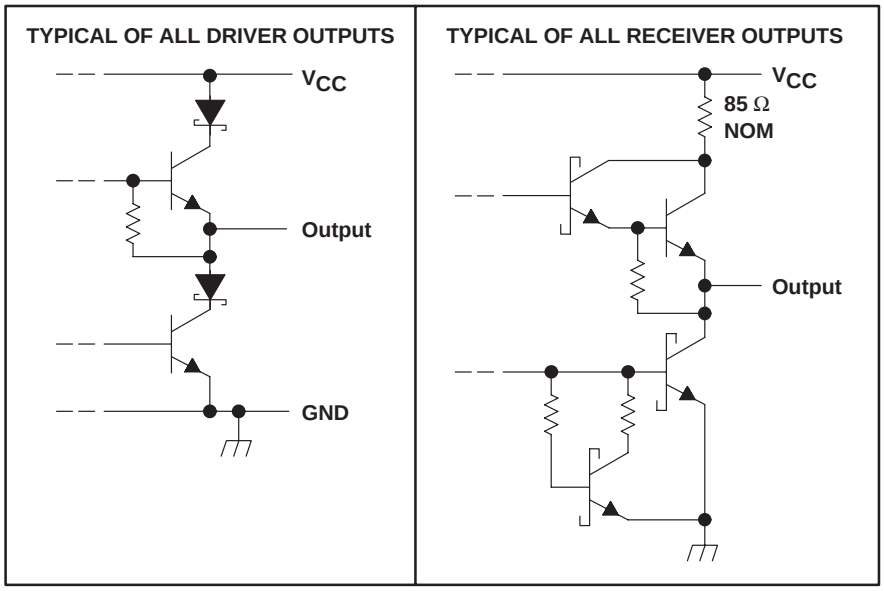


schematics of inputs



All resistor values are nominal.

schematics of outputs



All resistor values are nominal.

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)†

Supply voltage, V_{CC} (see Note 1)	7 V
Input voltage, V_I (DE, $\overline{RE}$, and D inputs)	7 V
Receiver input voltage range, V_I (A or B inputs)	–25 V to 25 V
Receiver differential input voltage range, V_{ID} (see Note 2)	–25 V to 25 V
Driver output voltage range, V_O	–10 V to 15 V
Receiver low-level output current, I_{OL}	50 mA
Package thermal impedance, θ_{JA} (see Note 3): N package	78°C/W
NS package	111°C/W
Storage temperature range, T_{stg}	–65°C to 150°C
Lead temperature 1,6 mm (1/16 inch) from case for 10 seconds	260°C

† Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTES: 1. All voltage values, except differential input voltage, are with respect to the network ground terminal.
2. Differential input voltage is measured at the noninverting terminal with respect to the inverting terminal.
3. The package thermal impedance is calculated in accordance with JESD 51, except for through-hole packages, which use a trace length of zero.

recommended operating conditions

		MIN	NOM	MAX	UNIT
Supply voltage, V_{CC}		4.75	5	5.25	V
High-level input voltage, V_{IH}	DE, $\overline{RE}$, and D inputs	2			V
Low-level input voltage, V_{IL}				0.8	V
Common-mode output voltage, V_{OC}	Driver	–7†		12	V
High-level output current, I_{OH}				–60	mA
Low-level output current, I_{OL}				60	mA
Common-mode input voltage, V_{IC}	Receiver			±12	V
Differential input voltage, V_{ID}				±12	V
High-level output current, I_{OH}				–400	µA
Low-level output current, I_{OL}				16	mA
Operating free-air temperature, T_A		–20		85	°C

† The algebraic convention, where the less positive (more negative) limit is designated as minimum, is used in this data sheet for common-mode output and threshold voltage levels only.

DRIVER SECTIONS

electrical characteristics over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted)

PARAMETER		TEST CONDITIONS			MIN	TYP†	MAX	UNIT
V_{IK}	Input clamp voltage	I_I = –18 mA					–1.5	V
V_{OH}	High-level output voltage	V_{IH} = 2 V,	V_{IL} = 0.8 V,	I_{OH} = –33 mA		3.7		V
V_{OL}	Low-level output voltage	V_{IH} = 2 V,	V_{IL} = 0.8 V,	I_{OH} = 33 mA		1.1		V
$\lvert V_{OD1}\rvert$	Differential output voltage	I_O = 0			1.5		6	V
$\lvert V_{OD2}\rvert$	Differential output voltage	R_L = 100 Ω,	See Figure 1		2 or 1/2 V_{OD1}‡			V
		R_L = 54 Ω,	See Figure 1		1.5		5	
V_{OD3}	Differential output voltage	See Note 4			1.5		5	V
$\Delta\lvert V_{OD}\rvert$	Change in magnitude of differential output voltage (see Note 5)	R_L = 54 Ω or 100 Ω,		See Figure 1			±0.2	V
V_{OC}	Common-mode output voltage				–1§		3	V
$\Delta\lvert V_{OC}\rvert$	Change in magnitude of common-mode output voltage (see Note 5)						±0.2	V
I_O	Output current with power off	V_{CC} = 0,	V_O = –7 V to 12 V				±100	µA
I_{OZ}	High-impedance-state output current	V_O = –7 V to 12 V					±100	µA
I_{IH}	High-level input current	V_{IH} = 2.7 V					20	µA
I_{IL}	Low-level input current	V_{IL} = 0.4 V					–100	µA
I_{OS}	Short-circuit output current (see Note 6)	V_O = –7 V					–250	mA
		V_O = V_{CC}					250	
		V_O = 12 V					250	
I_{CC}	Supply current	No load	Outputs enabled			80	110	mA
			Outputs disabled			50	80	

† All typical values are at V_{CC} = 5 V and T_A = 25°C.
‡ The minimum V_{OD2} with a 100-Ω load is either 1/2 V_{OD1} or 2 V, whichever is greater.
§ The algebraic convention, where the less positive (more negative) limit is designated as minimum, is used in this data sheet for common-mode output and threshold voltage levels only.

NOTES: 4. See TIA/EIA-485-A Figure 3.5, Test Termination Measurement 2
5. $\Delta\lvert V_{OD}\rvert$ and $\Delta\lvert V_{OC}\rvert$ are the changes in magnitude of V_{OD} and V_{OC}, respectively, that occur when the input is changed from a high level to a low level.
6. Not more than one output should be shorted at a time, and the duration of the short circuit should not exceed one second.

switching characteristics at V_{CC} = 5 V, C_L = 50 pF, T_A = 25°C

PARAMETER		TEST CONDITIONS		MIN	TYP	MAX	UNIT
$t_{d(OD)}$	Differential output delay time	R_L = 54 Ω,	See Figure 3		20	25	ns
$t_{t(OD)}$	Differential output transition time				27	35	ns
t_{PLH}	Propagation delay time, low- to high-level output	R_L = 27 Ω,	See Figure 4		20	25	ns
t_{PHL}	Propagation delay time, high- to low-level output				20	25	ns
t_{PZH}	Output enable time to high level	R_L = 110 Ω,	See Figure 5		80	120	ns
t_{PZL}	Output enable time to low level	R_L = 110 Ω,	See Figure 6		40	60	ns
t_{PHZ}	Output disable time from high level	R_L = 110 Ω,	See Figure 5		90	120	ns
t_{PLZ}	Output disable time from low level	R_L = 110 Ω,	See Figure 6		30	45	ns

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
TBD: The Pb-Free/Green conversion plan has not been defined.
Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.
Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.
Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
