

DS8641 Quad Unified Bus Transceiver

General Description

The DS8641 is a quad high speed drivers/receivers designed for use in bus organized data transmission systems interconnected by terminated 120Ω impedance lines. The external termination is intended to be a 180Ω resistor from the bus to the +5V logic supply together with a 390Ω resistor from the bus to ground. The bus can be terminated at one or both ends. Low bus pin current allows up to 27 driver/receiver pairs to utilize a common bus. The bus loading is unchanged when $V_{CC} = 0V$. The receivers incorporate tight thresholds for better bus noise immunity. One two-input NOR gate is included to disable all drivers in a package simultaneously.

Features

- 4 separate driver/receiver pairs per package
- Guaranteed minimum bus noise immunity of 0.6V, 1.1V typ
- Temperature insensitive receiver thresholds track bus logic levels
- 30 μA typical bus terminal current with normal V_{CC} or with $V_{CC} = 0V$
- Open collector driver output allows wire-OR connection
- High speed
- Series 74 TTL compatible driver and disable inputs and receiver outputs
