FEATURES

•	TI-OPC™ Circuitry Limits Ringing on
	Unevenly Loaded Backplanes

- **OEC™** Circuitry Improves Signal Integrity and **Reduces Electromagnetic Interference**
- **Bidirectional Interface Between GTLP Signal** Levels and LVTTL Logic Levels
- LVTTL Interfaces Are 5-V Tolerant .
- Medium-Drive GTLP Outputs (50 mA)
- LVTTL Outputs (-24 mA/24 mA)
- GTLP Rise and Fall Times Designed for **Optimal Data-Transfer Rate and Signal** Integrity in Distributed Loads
- I_{off} and Power-Up 3-State Support Hot Insertion
- **Bus Hold on A-Port Data Inputs**
- Latch-Up Performance Exceeds 100 mA Per JESD 78, Class II
- **ESD Protection Exceeds JESD 22**
 - 2000-V Human-Body Model (A114-A)
 - 200-V Machine Model (A115-A)
 - 1000-V Charged-Device Model (C101)

DESCRIPTION/ORDERING INFORMATION

The SN74GTLPH306 is a medium-drive, 8-bit bus transceiver that provides LVTTL-to-GTLP and GTLP-to-LVTTL signal-level translation. The device provides a high-speed interface between cards operating at LVTTL logic levels and a backplane operating at GTLP signal levels. High-speed (about three times faster than standard LVTTL or TTL) backplane operation is a direct result of GTLP's reduced output swing (<1 V), reduced input threshold levels, improved differential input, OEC™ circuitry, and TI-OPC™ circuitry. Improved GTLP OEC and TI-OPC circuits minimize bus-settling time and have been designed and tested using several backplane models. The medium drive allows incident-wave switching in heavily loaded backplanes with equivalent load impedance down to 19 Ω .

GTLP is the Texas Instruments (TI™) derivative of the Gunning Transceiver Logic (GTL) JEDEC standard JESD 8-3. The ac specification of the SN74GTLPH306 is given only at the preferred higher-noise-margin GTLP, but the user has the flexibility of using this device at either GTL (V_{TT} = 1.2 V and V_{RFF} = 0.8 V) or GTLP (V_{TT} = 1.5 V and $V_{RFF} = 1 \text{ V}$) signal levels.

Normally, the B port operates at GTLP signal levels. The A-port and control inputs operate at LVTTL logic levels, but are 5-V tolerant and are compatible with TTL and 5-V CMOS inputs. V_{REF} is the B-port differential input reference voltage.

This device is fully specified for hot-insertion applications using Ioff and power-up 3-state. The Ioff circuitry disables the outputs, preventing damaging current backflow through the device when it is powered down. The power-up 3-state circuitry places the outputs in the high-impedance state during power up and power down, which prevents driver conflict.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet. TI-OPC, OEC, TI are trademarks of Texas Instruments.

DESCRIPTION/ORDERING INFORMATION (CONTINUED)

This GTLP device features TI-OPC circuitry, which actively limits overshoot caused by improperly terminated backplanes, unevenly distributed cards, or empty slots during low-to-high signal transitions. This improves signal integrity, which allows adequate noise margin to be maintained at higher frequencies.

Active bus-hold circuitry holds unused or undriven LVTTL data inputs at a valid logic state. Use of pullup or pulldown resistors with the bus-hold circuitry is not recommended.

When V_{CC} is between 0 and 1.5 V, the device is in the high-impedance state during power up or power down. However, to ensure the high-impedance state above 1.5 V, the output-enable (\overline{OE}) input should be tied to V_{CC} through a pullup resistor; the minimum value of the resistor is determined by the current-sinking capability of the driver.

(1) Package drawings, standard packing quantities, thermal data, symbolization, and PCB design guidelines are available at www.ti.com/sc/package.

FUNCTIONAL DESCRIPTION

The SN74GTLPH306 is an 8-bit bus transceiver and is designed for asynchronous communication between data buses. The device transmits data from the A port to the B port or from the B port to the A port, depending on the logic level at the direction-control (DIR) input. \overline{OE} can be used to disable the device so the buses are effectively isolated. Data polarity is noninverting.

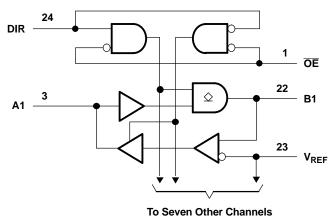

For A-to-B data flow, when \overline{OE} is low and DIR is high, the B outputs take on the logic value of the A inputs. When \overline{OE} is high, the outputs are in the high-impedance state.

The data flow for B to A is similar to A to B, except \overline{OE} and DIR are low.

FUNCTION TABLE

		PW package		88	
T _{stg}	Storage temperature range		-65	150	°C

(1) Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

(2) The input and output negative-voltage ratings may be exceeded if the input and output clamp-current ratings are observed.

(3) This current flows only when the output is in the high state and $V_0 > V_{CC}$.

(4) The package thermal impedance is calculated in accordance with JESD 51-7.

SN74GTLPH306 8-BIT LVTTL-TO-GTLP BUS TRANSCEIVER

SCES284E-OCTOBER 1999-REVISED APRIL 2005

I _{OL}	Low-level output current	B port		50	mA			
$\Delta t/\Delta v$	Input transition rise or fall rate	Outputs enabled			10	ns/V		
$\Delta t / \Delta V_{CC}$	Power-up ramp rate		20			μs/V		
T _A	Operating free-air temperature		-40		85	°C		

(1) All unused inputs of the device must be held at V_{CC} or GND to ensure proper device operation. Refer to the TI application report, *Implications of Slow or Floating CMOS Inputs*, literature number SCBA004.

(2) Proper connection sequence for use of the B-port I/O precharge feature is GND and BIAS V_{CC} = 3.3 V first, I/O second, and V_{CC} = 3.3 V last, because the BIAS V_{CC} precharge circuitry is disabled when any V_{CC} pin is connected. The control and V_{REF} inputs can be connected anytime, but normally are connected during the I/O stage. If B-port precharge is not required, any connection sequence is acceptable, but generally, GND is connected first.

(3) V_{TT} and R_{TT} can be adjusted to accommodate backplane impedances if the dc recommended I_{OL} ratings are not exceeded.

(4) V_{REF} can be adjusted to optimize noise margins, but normally is two-thirds V_{TT} . TI-OPC circuitry is enabled in the A-to-B direction and is activated when $V_{TT} > 0.7$ V above V_{REF} . If operated in the A-to-B direction, V_{REF} should be set to within 0.6 V of V_{TT} to minimize current drain.

Electrical Characteristics

over recommended operating free-air temperature range for GTLP (unless otherwise noted)

P/	ARAMETER	TEST CONDITIONS	MIN TYP ⁽¹⁾	MAX	UNIT		
V _{IK}		V _{CC} = 3.15 V,	I _I = -18 mA		-1.2	V	
		$V_{CC} = 3.15 \text{ V to } 3.45 \text{ V},$	I _{OH} = −100 μA	V _{CC} – 0.2

		$V_{CC} = 3.15 V$	I _{OH} = -24 mA	2			
		$V_{CC} = 3.15 \text{ V to } 3.45 \text{ V},$	I _{OL} = 100 μA		0.2		
	A port		I _{OL} = 12 mA		0.4		
V _{OL}		V _{CC} = 3.15 V	I _{OL} = 24 mA		0.5	V	
	Durant	N 045 V	I _{OL} = 40 mA		0.4		
	B port	$V_{CC} = 3.15 V$	I _{OL} = 50 mA		0.55		
	A-port and		$V_{I} = 0 \text{ or } V_{CC}$		±5		
l _l ⁽²⁾	(2) control inputs	V _{CC} = 3.45 V	V _I = 5.5 V		±20	μA	
B port		V _I = 0 to 1.5 V		±5	5		
I _{BHL} (3)	A port	V _{CC} = 3.15 V,	V _I = 0.8 V	75		μA	
I _{BHH} ⁽⁴⁾	A port	V _{CC} = 3.15 V,	V _I = 2 V	-75		μA	
I _{BHLO} (5)	A port	V _{CC} = 3.45 V,	$V_{I} = 0$ to V_{CC}	500		μΑ	
I _{BHHO} ⁽⁶⁾	A port	V _{CC} = 3.45 V,	$V_{I} = 0$ to V_{CC}	-500		μA	
		$V_{CC} = 3.45 \text{ V}, I_{O} = 0,$	Outputs high		20		
I _{CC}	A or B port				20	mA	
		V_{I} (B port) = V_{TT} or GND	Outputs disabled		20		
$\Delta I_{CC}^{(7)}$		V_{CC} = 3.45 V, One A-port or control input at V_{CC} – 0.6 V, Other A-port or control inputs at V_{CC} or GND			1.5	mA	
C _i	Control inputs	V _I = 3.15 V or 0		4.5	5	pF	
<u>_</u>	A port	V ₀ = 3.15 V or 0		7.5	9	- 5	
C _{io}	B port	V _O = 1.5 V or 0		7.5	9	pF	

 All typical values are at V_{CC} = 3.3 V, T_A = 25°C.
For I/O ports, the parameter I_I includes the off-state output leakage current.
The bus-hold circuit can sink at least the minimum low sustaining current at V_{IL}max. I_{BHL} should be measured after lowering V_{IN} to GND and then raising it to V_{IL}max.

(4) The bus-hold circuit can source at least the minimum high sustaining current at VIHmin. IBHH should be measured after raising VIN to VCC and then lowering it to VIHmin.

An external driver must source at least I_{BHLO} to switch this node from low to high. An external driver must sink at least I_{BHHO} to switch this node from high to low. (5)

(6)

This is the increase in supply current for each input that is at the specified TTL voltage level, rather than V_{CC} or GND. (7)

SCES284E-OCTOBER 1999-REVISED APRIL 2005

Distributed-Load Backplane Switching Characteristics

The preceding switching characteristics table shows the switching characteristics of the device into a lumped load (Figure 1). However, the designer's backplane application probably is a distributed load. The physical representation is shown in Figure 2. This backplane, or distributed load, can be approximated closely to a resistor inductance capacitance (RLC) circuit, as shown in Figure 3. This device has been designed for optimum performance in this RLC circuit. The following switching characteristics table shows the switching characteristics of the device into the RLC load, to help the designer better understand the performance of the GTLP device in this typical backplane. See www.ti.com/sc/gtlp for more information.

⁽¹⁾ The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details. **TBD:** The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

⁽³⁾ MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
