description

These bus transceivers are designed for asynchronous three-way communication between four-line data buses. They give the designer a choice of selecting inverting, noninverting, or a combination of inverting and noninverting data paths with either 3-state or open-collector outputs.

The S0 and S1 inputs select the bus from which data are to be transferred. The $\overline{G}$ inputs enable the bus or buses to which data are to be transferred. The port for any bus selected for input and any other bus not enabled for output will be at high impedance including those of the open-collector devices.

The SN54LS440 through SN54LS442 and SN54LS444 are characterized for operation over the fullmilitary temperature range of −55°C to 125°C. The SN74LS440 through SN74LS442 and SN74LS444 are characterized for operation from 0°C to 70°C.
