## Functional Description

The ABT16244 contains sixteen non-inverting buffers with 3 -STATE outputs. The device is nibble (4 bits) controlled with each nibble functioning identically, but independent of the other. The control pins can be shorted together to obtain full 16-bit operation.

Note 7: This specification is guaranteed but not tested. The limits apply to propagation delays for all paths described switching in phase
(i.e., all LOW-to-HIGH, HIGH-to-LOW, etc.).

Note 8: This specification is guaranteed but not tested. The limits represent propagation delay with 250 pF load capacitors in place of the 50 pF load capacitors in the standard AC load. This specification pertains to single output switching only.
Note 9: This specification is guaranteed but not tested. The limits represent propagation delays for all paths described switching in phase
(i.e., all LOW-to-HIGH, HIGH-to-LOW, etc.) with 250 pF load capacitors in place of the 50 pF load capacitors in the standard AC load

Note 10: The 3-STATE delay times are dominated by the RC network ( $500 \Omega, 250 \mathrm{pF}$ ) on the output and have been excluded from the datasheet.

Note 11: This specification is guaranteed but not tested. The limits apply to propagation delays for all paths described switching in phase
(i.e., all LOW-to-HIGH, HIGH-to-LOW, etc.)

Note 12: These specifications guaranteed but not tested. The limits represent propagation delays with 250 pF load capacitors in place of the 50 pF load capacitors in the standard AC load.
Note 13: Skew is defined as the absolute value of the difference between the actual propagation delays for any two separate outputs of the same device. The specification applies to any outputs switching HIGH to LOW (t $\mathrm{t}_{\mathrm{OHL}}$ ), LOW-to-HIGH ( $\mathrm{t}_{\mathrm{OLLH}}$ ), or any combination switching LOW-to-HIGH and/or HIGH-toLOW (tost). The specification is guaranteed but not tested.
Note 14: This describes the difference between the delay of the LOW-to-HIGH and the HIGH-to-LOW transition on the same pin. It is measured across all the outputs (drivers) on the same chip, the worst (largest delta) number is the guaranteed specification. This specification is guaranteed but not tested.
Note 15: Propagation delay variation for a given set of conditions (i.e., temperature and $V_{C C}$ ) from device to device. This specification is guaranteed but not tested.

## Capacitance

| Symbol | Parameter | Typ | Units | Conditions <br> $\mathbf{T}_{\mathbf{A}}=\mathbf{2 5}^{\circ} \mathbf{C}$ |
| :--- | :--- | :---: | :---: | :---: |
| $\mathrm{C}_{\text {IN }}$ | Input Capacitance | 5.0 | pF | $\mathrm{V}_{\mathrm{CC}}=5.0 \mathrm{~V}$ |
| $\mathrm{C}_{\text {OUT }}($ Note 16 $)$ | Output Capacitance | 9.0 | pF | $\mathrm{V}_{\mathrm{CC}}=5.0 \mathrm{~V}$ |

Note 16: $\mathrm{C}_{\text {OUT }}$ is measured at frequency $\mathrm{f}=1 \mathrm{MHz}$; per MIL STD-883, Method 3012.

## LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF FAIRCHILD SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component in any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
