18-bit to 36-bit address driver with bus hold (3-State) 74ALVCHS16830

FEATURES

- Diodes on inputs clamp overshoot
- ESD classification testing is done to JEDEC Standard JESD22. Protection exceeds 2000 V HBM per method A114.
- Latch-up testing is done to JEDEC Standard JESD78, which exceeds 100 mA.
- Bus hold on data inputs eliminates the need for external pullup/pulldown resistors
- Packaged in thin very small-outline package (TVSOP) — 0.4 mm pitch
- Optimized for use with PCK953 in SDRAM module applications
- Low noise, low skew

DESCRIPTION

The ALVCHS16830 address driver is designed for 2.3 V to 3.6 V V_{CC} operation.

Diodes to V_{CC} have been added on the inputs to clamp overshoot.

The bus hold feature retains the inputs' last state whenever the input bus goes to high impedance. This prevents floating inputs and eliminates the need for pull up or pull down resistors.

To ensure the high-impedance state during power up or power down, the output-enable ($\overline{OE}$) input should be tied to V_{CC} through a pullup resistor; the minimum value of the resistor is determined by the current-sinking capability of the driver.

The 74ALVCHS16830 is characterized for operation from –40 to +85 °C.
