7-stage binary ripple counter

Rev. 03 — 12 November 2004

Product data sheet

1. General description

The 74HC4024 is a high-speed Si-gate CMOS device and is pin compatible with the 4024 of the 4000B series. The 74HC4024 is specified in compliance with JEDEC standard no. 7A.

The 74HC4024 is a 7-stage binary ripple counter with a clock input (\overline{CP}), an overriding asynchronous master reset input (MR) and seven fully buffered parallel outputs (Q0 to Q6).

The counter advances on the HIGH-to-LOW transition of \overline{CP} .

A HIGH on MR clears all counter stages and forces all outputs LOW, independent of the state of \overline{CP} .

Each counter stage is a static toggle flip-flop.

Schmitt-trigger action in the clock input makes the circuit highly tolerant to slower clock rise and fall times.

2. Features
