DESCRIPTION

The 74AC174 is an advanced high-speed CMOS HEX D-TYPE FLIP FLOP WITH CLEAR fabricated with sub-micron silicon gate and double-layer metal wiring C^2MOS tecnology.

Information signals applied to D inputs are transferred to the Q output on the positive going edge of the clock pulse.
When the $\overline{CLEAR}$ input is held low, the Q outputs are held low independentely of the other inputs.
All inputs and outputs are equipped with protection circuits against static discharge, giving them 2KV ESD immunity and transient excess voltage.

$R_L = R_1$ = 500Ω or equivalent
$R_T = Z_{OUT}$ of pulse generator (typically 50Ω)
