2.5 V/3.3 V/5.0 V Differential Data/Clock D Flip-Flop with Reset

Multi-Level Inputs to LVPECL Translator w/ Internal Termination

The NB4L52 is a differential Data and Clock D flip-flop with a differential asynchronous Reset. The differential inputs incorporate internal 50 Ω termination resistors and will accept PECL, LVPECL, LVCMOS, LVTTTL, CML, or LVDS logic levels. When Clock transitions from Low to High, Data will be transferred to the differential LVPECL outputs. The differential Clock inputs allow the NB4L52 to also be used as a negative edge triggered device. The device is housed in a small 3x3 mm 16 pin QFN package.
