# **TC74VCX16374FT**

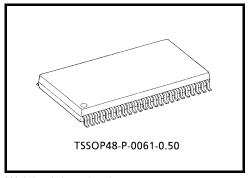

Low-Voltage 16-Bit D-Type Flip-Flop with 3.6-V Tolerant Inputs and Outputs

The TC74VCX16374FT is a high-performance CMOS 16-bit D-type flip flop. Designed for use in 1.8-V, 2.5-V or 3.3-V systems, it achieves high-speed operation while maintaining the CMOS low power dissipation.

It is also designed with over voltage tolerant inputs and outputs up to  $3.6\ V\!.$ 

This 16-bit D-type flip-flop is controlled by a clock input (CK) and a output enable input  $(\overline{OE})$  which are common to each byte. It can be used as two 8-bit flip-flops or one 16-bit flip-flop. When the  $\overline{OE}$  input is high, the outputs are in a high-impedance state.

All inputs are equipped with protection circuits against static discharge.

Weight: 0.25 g (typ.)
