## 2.5V/3.3V 12 Gb/s Differential Clock/Data SmartGate with CML Output and Internal Termination

The NB7L86M is a multi-function differential Logic Gate, which can be configured as an AND/NAND, OR/NOR, XOR/XNOR, or 2:1 MUX. This device is part of the GigaComm family of high performance Silicon Germanium products. The NB7L86M is an ultra-low jitter multi-logic gate with a maximum data rate of 12 Gb/s and input clock frequency of 8 GHz suitable for Data Communication Systems, Telecom Systems, Fiber Channel, and GigE applications.

Differential inputs incorporate internal 50  $\Omega$  termination resistors and accept LVNECL (Negative ECL), LVPECL (Positive ECL), LVCMOS, LVTTTL, CML, or LVDS. The differential 16 mA CML output provides matching internal 50  $\Omega$  termination, and 400 mV output swing when externally terminated 50  $\Omega$  to VCC.

The device is housed in a low profile 3x3 mm 16-pin QFN package.

Application notes, models, and support documentation are available on [www.onsemi.com](http://www.onsemi.com).
