74F794
8-Bit Register with Readback

General Description

The 74F794 is an 8-bit register with readback capability designed to store data as well as read the register information back onto the data bus. The I/O bus (D bus) has 3-STATE outputs. Current sinking capability is 64 mA on both the D and Q busses.

Data is loaded into the registers on the LOW-to-HIGH transition of the clock (CP). The output enable ($\overline{OE}$) is used to enable data on D_0–D_7. When $\overline{OE}$ is LOW, the output of the registers is enabled on D_0–D_7, enabling D as an output bus. When OE is HIGH, D_0–D_7 are inputs to the registers configuring D as an input bus.

Features

- 3-STATE outputs on the I/O port
- D and Q output sink capability of 64 mA
- Functionally and pin equivalent to the 74LS794

Note 2: Absolute maximum ratings are values beyond which the device may be damaged or have its useful life impaired. Functional operation under these conditions is not implied.

Note 3: In this case the output of the register is clocked to the inputs and the overall Q output is unchanged at Q_n.

Note 4: Either voltage limit or current limit is sufficient to protect inputs.
