# LOW-VOLTAGE 4-BIT 1-OF-2 FET MULTIPLEXER/DEMULTIPLEXER

#### **FEATURES**

- Controlled Baseline
  - One Assembly Site
  - One Test Site
  - One Fabrication Site
- Extended Temperature Performance of -55°C to 125°C
- Enhanced Diminishing Manufacturing Sources (DMS) Support
- Enhanced Product-Change Notification
- Qualification Pedigree (1)
- (1) Component qualification in accordance with JEDEC and industry standards to ensure reliable operation over an extended temperature range. This includes, but is not limited to, Highly Accelerated Stress Test (HAST) or biased 85/85, temperature cycle, autoclave or unbiased HAST, electromigration, bond intermetallic life, and mold compound life. Such qualification testing should not be viewed as justifying use of this component beyond specified performance and environmental limits.

- 5-Ω Switch Connection Between Two Ports
- Rail-to-Rail Switching on Data I/O Ports
- I<sub>off</sub> Supports Partial-Power-Down Mode Operation
- Latch-Up Performance Exceeds 100 mA Per JESD 78, Class II
- ESD Protection Exceeds JESD 22
  - 2000-V Human-Body Model (A114-A)
  - 200-V Machine Model (A115-A)

#### DESCRIPTION/ORDERING INFORMATION

The SN74CBTLV3257 is a 4-bit 1-of-2 high-speed FET multiplexer/demultiplexer. The low on-state resistance of the switch allows connections to be made with minimal propagation delay.

The select (S) input controls the data flow. The FET multiplexers/demultiplexers are disabled when the output-enable (OE) input is high.

This device is fully specified for partial-power-down applications using  $I_{off}$ . The  $I_{off}$  feature ensures that damaging current does not backflow through the device when it is powered down. The device has isolation during power off.

To ensure the high-impedance state during power up or power down,  $\overline{OE}$  should be tied to  $V_{CC}$  through a pullup resistor; the minimum value of the resistor is determined by the current-sinking capability of the driver.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

### SIMPLIFIED SCHEMATIC, EACH FET SWITCH

# Absolute Maximum Ratings<sup>(1)</sup>

over operating free-air temperature range (unless otherwise noted)

|                  |                                    |                           | MIN  | MAX | UNIT |
|------------------|------------------------------------|---------------------------|------|-----|------|
| V <sub>CC</sub>  | Supply voltage range               |                           | -0.5 | 4.6 | V    |
| VI               | Input voltage range <sup>(2)</sup> |                           | -0.5 | 4.6 | V    |
|                  | Continuous channel current         |                           |      | 128 | mA   |
| I <sub>IK</sub>  | Input clamp current                | V <sub>IO</sub> < 0)      |      | -50 | mA   |
| $\theta_{JA}$    | Package thermal impedance          | PW package <sup>(3)</sup> |      | 108 | °C/W |
| T <sub>stg</sub> | Storage temperature range          |                           | -65  | 150 | °C   |

<sup>(1)</sup> Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

# Recommended Operating Conditions(1)

|                 |  |  | MIN | MAX | UNIT |
|-----------------|--|--|-----|-----|------|
| $V_{CC}$        | Supply voltage   |  | 2.3 | 3.6 | V    |
| V               | High-level control input voltage   | V <sub>CC</sub> = 2.3 V to 2.7 V           | 1.7 |     | V    |
| V <sub>IH</sub> | nigh-level control input voltage   | $V_{CC} = 2.7 \text{ V to } 3.6 \text{ V}$ | 2   |     | V    |
| V               | Low level control input voltage  | $V_{CC} = 2.3 \text{ V to } 2.7 \text{ V}$ |     | 0.7 | V    |
| $V_{IL}$        | Low-level control input voltage $V_{CC} = 2.7 \text{ V to } 3.6 \text{ V}$ |  |     | 0.8 | V    |
| T <sub>A</sub>  | Operating free-air temperature   |  | -55 | 125 | °C   |

<sup>(1)</sup> All unused control inputs of the device must be held at V<sub>CC</sub> or GND to ensure proper device operation. Refer to the TI application report, Implications of Slow or Floating CMOS Inputs, literature number SCBA004.

### **Electrical Characteristics**

over recommended operating free-air temperature range (unless otherwise noted)

| PARAMETER        |                           | TEST CONDITIO                   | MIN                   | TYP <sup>(1)</sup> | MAX | UNIT |    |
|------------------|---------------------------|---------------------------------|-----------------------|--------------------|-----|------|----|
| V <sub>IK</sub>  | V <sub>CC</sub> = 3 V,    | I <sub>I</sub> = -18 mA         |                       |                    |     | -1.2 | V  |
| I <sub>I</sub>   | $V_{CC} = 3.6 \text{ V},$ | $V_I = V_{CC}$ or GND           |                       |                    |     | ±1   | μΑ |
| I <sub>off</sub> | $V_{CC} = 0$ ,            | $V_{I}$ or $V_{O} = 0$ to 3.6 V | 1                     |                    |     | 15   | μΑ |
| I <sub>CC</sub>  | $V_{CC} = 3.6 \text{ V},$ | $I_{O} = 0$ ,                   | $V_I = V_{CC}$ or GND |                    |     | 10   | μΑ |

(1) All typical values are at  $V_{CC}$  = 3.3 V (unless otherwise noted),  $T_A$  = 25°C.

<sup>(2)</sup> The input and output negative-voltage ratings may be exceeded if the input and output clamp-current ratings are observed.

<sup>(3)</sup> The package thermal impedance is calculated in accordance with JESD 51-7.

<sup>(1)</sup> The propagation delay is the calculated RC time constant of the typical on-state resistance of the switch and the specified load capacitance, when driven by an ideal voltage source (zero output impedance).

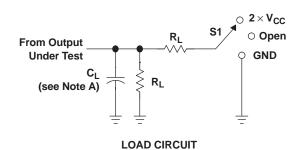

Submit Documentation Feedback

This is the increase in supply current for each input that is at the specified voltage level, rather than  $V_{CC}$  or GND. Measured by the voltage drop between the A and the B terminals at the indicated current through the switch. On-state resistance is determined by the lower of the voltages of the two (A or B) terminals.

VOLTAGE WAVEFORMS
PROPAGATION DELAY TIMES
INVERTING AND NONINVERTING OUTPUTS

VOLTAGE WAVEFORMS ENABLE AND DISABLE TIMES LOW- AND HIGH-LEVEL ENABLING

NOTES: A. C<sub>L</sub> includes probe and jig capacitance.

- B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
- C. All input pulses are supplied by generators having the following characteristics: PRR  $\leq$  10 MHz,  $Z_O = 50 \Omega$ ,  $t_r \leq$  2 ns,  $t_f \leq$  2 ns.
- D. The outputs are measured one at a time with one transition per measurement.
- E.  $t_{PLZ}$  and  $t_{PHZ}$  are the same as  $t_{dis}$ .
- F.  $t_{PZL}$  and  $t_{PZH}$  are the same as  $t_{en}$ .
- G. t<sub>PLH</sub> and t<sub>PHL</sub> are the same as t<sub>pd</sub>.
- H. All parameters and waveforms are not applicable to all devices.

#### **IMPORTANT NOTICE**

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
