Functional Description

The LVQ151 is a logic implementation of a single pole, 8-position switch with the switch position controlled by the state of three Select inputs, $S_0,\,S_1,\,S_2.$ Both true and complementary outputs are provided. The Enable input (\overline{E}) is active LOW. When it is not activated, the complementary output is HIGH and the true output is LOW regardless of all other inputs. The logic function provided at the output is:

$$Z = \overline{\mathbf{E}} \bullet (I_0 \bullet \overline{\mathbf{S}}_0 \bullet \overline{\mathbf{S}}_1 \bullet \overline{\mathbf{S}}_2 + I_1 \bullet \mathbf{S}_0 \bullet \overline{\mathbf{S}}_1 \bullet \overline{\mathbf{S}}_2 + I_2 \bullet \overline{\mathbf{S}}_0 \bullet \mathbf{S}_1 \bullet \overline{\mathbf{S}}_2 + I_3 \bullet \mathbf{S}_0 \bullet \mathbf{S}_1 \bullet \overline{\mathbf{S}}_2 + I_4 \bullet \overline{\mathbf{S}}_0 \bullet \overline{\mathbf{S}}_1 \bullet \overline{\mathbf{S}}_2 + I_5 \bullet \mathbf{S}_0 \bullet \overline{\mathbf{S}}_1 \bullet \overline{\mathbf{S}}_2 + I_6 \bullet \overline{\mathbf{S}}_0 \bullet \mathbf{S}_1 \bullet \mathbf{S}_2 + I_7 \bullet \mathbf{S}_0 \bullet \mathbf{S}_1 \bullet \overline{\mathbf{S}}_2)$$

The LVQ151 provides the ability, in one package to select from eight sources of data or control information. By proper manipulation of the inputs, the LVQ151 can provide any logic function of four variables and its complement.
