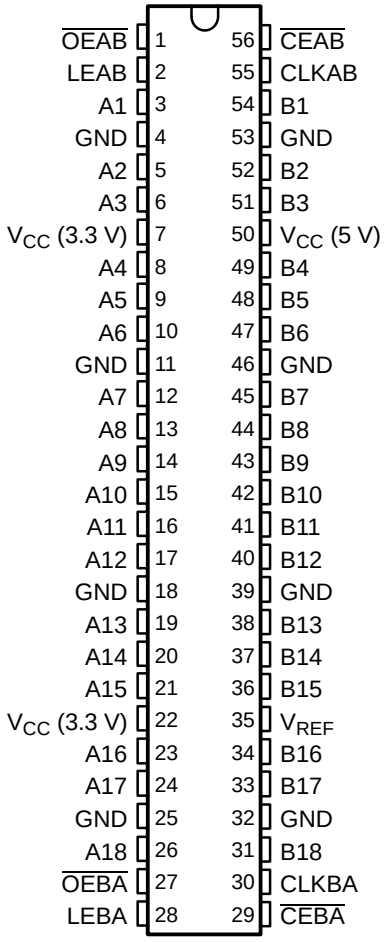
SN74GTLPH16612
18-BIT LVTTL-TO-GTLP UNIVERSAL BUS TRANSCEIVER

SCES326C–MARCH 2000–REVISED MAY 2005

FEATURES

- **Member of Texas Instruments Widebus™ Family**
- **UBT™ Transceiver Combines D-Type Latches and D-Type Flip-Flops for Operation in Transparent, Latched, Clocked, or Clock-Enabled Modes**
- **OEC™ Circuitry Improves Signal Integrity and Reduces Electromagnetic Interference**
- **Bidirectional Interface Between GTLP Signal Levels and LVTTL Logic Levels**
- **LVTTL Interfaces are 5-V Tolerant**
- **Medium-Drive GTLP Outputs (34 mA)**
- **LVTTL Outputs (–32 mA/64 mA)**
- **GTLP Rise and Fall Times Designed for Optimal Data-Transfer Rate and Signal Integrity in Distributed Loads**
- **I_{off} Supports Partial-Power-Down Mode Operation**
- **Bus Hold on A-Port Inputs**
- **Distributed V_{CC} and GND Pins Minimize High-Speed Switching Noise**
- **Latch-Up Performance Exceeds 100 mA Per JESD 78, Class II**
- **ESD Protection Exceeds JESD 22**
  - **– 2000-V Human-Body Model (A114-A)**
  - **– 200-V Machine Model (A115-A)**
  - **– 1000-V Charged-Device Model (C101)**

DGG OR DL PACKAGE
(TOP VIEW)



DESCRIPTION

The SN74GTLPH16612 is a medium-drive, 18-bit UBT™ transceiver that provides LVTTL-to-GTLP and GTLP-to-LVTTL signal-level translation. It allows for transparent, latched, clocked, or clock-enabled modes of data transfer. This device provides a high-speed interface between cards operating at LVTTL logic levels and backplanes operating at GTLP signal levels. High-speed (about two times faster than standard LVTTL or TTL) backplane operation is a direct result of the reduced output swing (<1 V), reduced input threshold levels, and OEC™ circuitry. These improvements minimize bus-settling time and have been designed and tested using several backplane models.

GTLP is a Texas Instruments (TI™) derivative of the Gunning Transceiver Logic (GTL) JEDEC standard JESD 8-3. The ac specification of the SN74GTLPH16612 is given only at the preferred higher noise-margin GTLP, but the user has the flexibility of using this device at either GTL (V_{TT} = 1.2 V and V_{REF} = 0.8 V) or GTLP (V_{TT} = 1.5 V and
V_{REF} = 1 V) signal levels.

The B port normally operates at GTLP levels, while the A-port and control inputs are compatible with LVTTL logic levels and are 5-V tolerant. V_{REF} is the reference input voltage for the B port.

To improve signal integrity, the SN74GTLPH16612 B-port output transition time is optimized for distributed backplane loads.

DESCRIPTION (CONTINUED)

V_{CC} (5 V) supplies the internal and GTLP circuitry, while V_{CC} (3.3 V) supplies the LVTTL output buffers.

To ensure the high-impedance state during power up or power down, $\overline{OE}$ should be tied to V_{CC} through a pullup resistor; the minimum value of the resistor is determined by the current-sinking capability of the driver.

Active bus-hold circuitry holds unused or undriven LVTTL data inputs at a valid logic state. Use of pullup or pulldown resistors with the bus-hold circuitry is not recommended.

This device is fully specified for partial-power-down applications using I_{off}. The I_{off} circuitry disables the outputs, preventing damaging current backflow through the device when it is powered down.

ORDERING INFORMATION

T_A	PACKAGE(1)		ORDERABLE PART NUMBER	TOP-SIDE MARKING

FUNCTIONAL DESCRIPTION

The SN74GTLPH16612 is a medium-drive (34 mA), 18-bit UBT transceiver, containing D-type latches and D-type flip-flops to allow data flow in transparent, latched, clocked, and clock-enabled modes and can replace any of the functions shown in Table 1. Data polarity is noninverting.

Table 1. SN74GTLPH16612 UBT Transceiver Replacement Functions

FUNCTION	8 BIT	9 BIT	10 BIT	16 BIT	18 BIT
Transceiver	'245, '623, '645	'863	'861	'16245, '16623	'16863
Buffer/driver	'241, '244, '541		'827	'16241, '16244, '16541	'16825
Latched transceiver	'543			'16543	'16472
Latch	'373, '573	'843	'841	'16373	'16843
Registered transceiver	'646, '652			'16646, '16652	'16474
Flip-flop	'374, '574		'821	'16374	
Standard UBT					'16500, '16501
Universal bus driver					'16835
Registered transceiver with clock enable	'2952			'16470, '16952	
Flip-flop with clock enable	'377	'823			'16823
Standard UBT with clock enable					'16600, '16601
SN74GTLPH16612 UBT transceiver replaces all above functions					

Data flow in each direction is controlled by the clock enables ($\overline{CEAB}$ and $\overline{CEBA}$), latch enables (LEAB and LEBA), clock (CLKAB and CLKBA), and output enables ($\overline{OEAB}$ and $\overline{OEBA}$).

For A-to-B data flow, when $\overline{CEAB}$ is low, the device operates on the low-to-high transition of CLKAB for the flip-flop and on the high-to-low transition of LEAB for the latch path, i.e., if $\overline{CEAB}$ and LEAB are low, the A data is latched, regardless of the state of CLKAB (high or low) and if LEAB is high, the device is in transparent mode. When $\overline{OEAB}$ is low, the outputs are active. When $\overline{OEAB}$ is high, the outputs are in the high-impedance state.

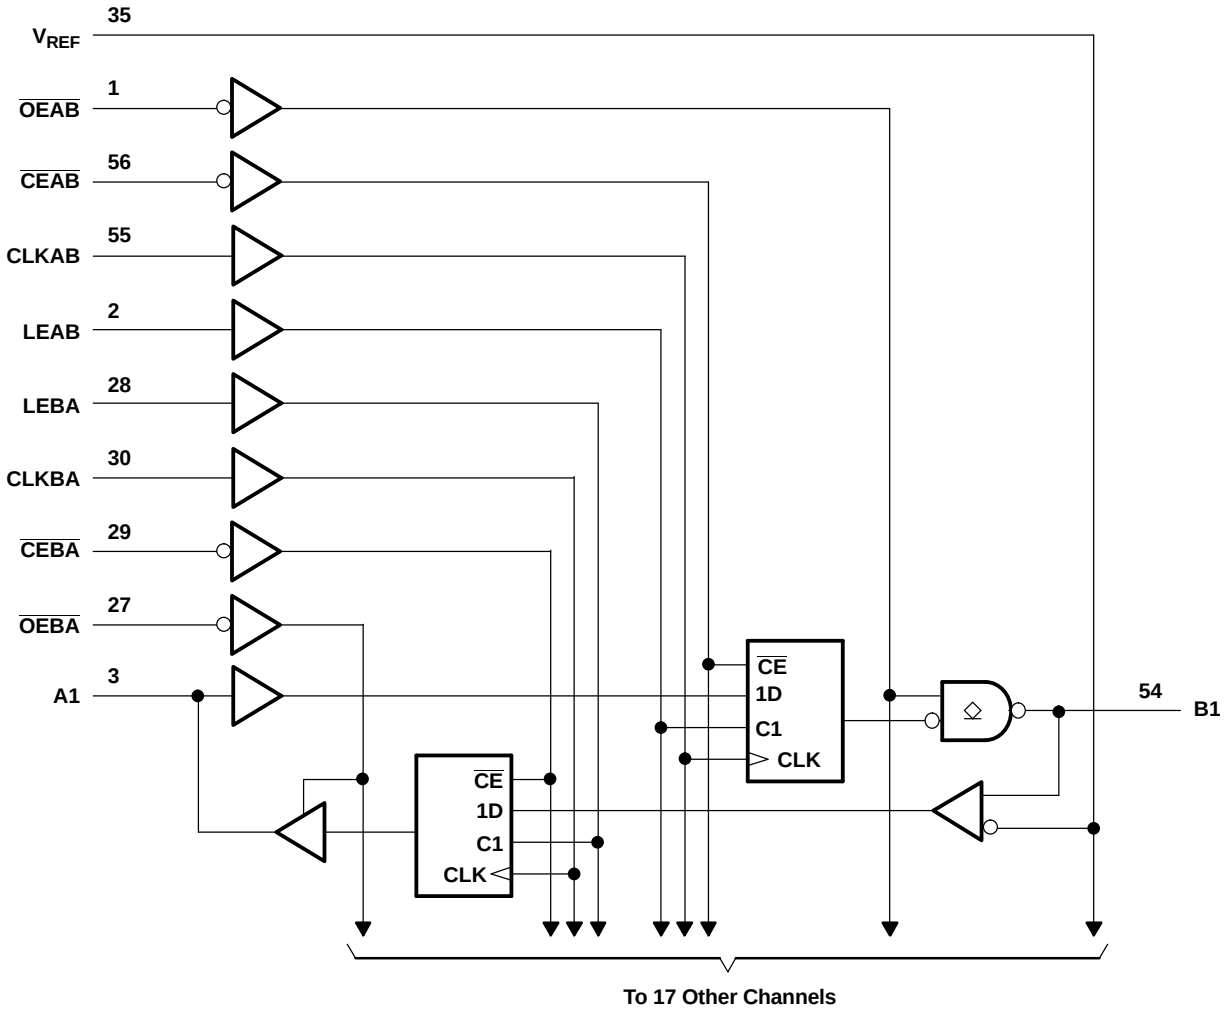
The data flow for B-to-A is similar to that of A-to-B, except that $\overline{CEBA}$, $\overline{OEBA}$, LEBA, and CLKBA are used.

FUNCTION TABLE(1)

INPUTS					OUTPUT B	MODE
$\overline{CEAB}$	$\overline{OEAB}$	LEAB	CLKAB	A		
X	H	X	X	X	Z	Isolation
L	L	L	H	X	B_0(2)	Latched storage of A data
L	L	L	L	X	B_0(3)	
X	L	H	X	L	L	True transparent
X	L	H	X	H	H	
L	L	L	↑	L	L	Clocked storage of A data
L	L	L	↑	H	H	
H	L	L	X	X	B_0(3)	Clock inhibit

(1) A-to-B data flow is shown. B-to-A data flow is similar, but uses $\overline{CEBA}$, $\overline{OEBA}$, LEBA, and CLKBA. The condition when $\overline{OEAB}$ and $\overline{OEBA}$ are both low at the same time is not recommended.
(2) Output level before the indicated steady-state input conditions were established, provided that CLKAB was high before LEAB went low.
(3) Output level before the indicated steady-state input conditions were established.

LOGIC DIAGRAM (POSITIVE LOGIC)



Absolute Maximum Ratings(1)

over operating free-air temperature range (unless otherwise noted)

			MIN	MAX	UNIT
V_{CC}	Supply voltage range	3.3 V	–0.5	4.6	V
		5 V	–0.5	7	
V_I	Input voltage range(2)	A port and control inputs	–0.5	7	V
		B port and V_{REF}	–0.5	4.6	
V_O	Voltage range applied to any output in the high-impedance or power-off state(2)	A port	–0.5	7	V
		B port	–0.5	4.6	
I_O	Current into any output in the low state	A port		128	mA
		B port		80	
I_O	Current into any A-port output in the high state(3)			64	mA
	Continuous current through each V_{CC} or GND			±100	mA
I_{IK}	Input clamp current	$V_I < 0$		–50	mA
I_{OK}	Output clamp current	$V_O < 0$		–50	mA
θ_{JA}	Package thermal impedance(4)	DGG package		64	°C/W
		DL package		56	
T_{stg}	Storage temperature range		–65	150	°C

(1) Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) The input and output negative-voltage ratings may be exceeded if the input and output clamp-current ratings are observed.
(3) This current flows only when the output is in the high state and $V_O > V_{CC}$.
(4) The package thermal impedance is calculated in accordance with JESD 51-7.

Recommended Operating Conditions(1)(2)(3)(4)

			MIN	NOM	MAX	UNIT
V_{CC}	Supply voltage	3.3 V	3.15	3.3	3.45	V
		5 V	4.75	5	5.25	
V_{TT}	Termination voltage	GTL	1.14	1.2	1.26	V
		GTLP	1.35	1.5	1.65	
V_{REF}	Reference voltage	GTL	0.74	0.8	0.87	V
		GTLP	0.87	1	1.1	
V_I	Input voltage	B port			V_{TT}	V
		Except B port		V_{CC}	5.5	
V_{IH}	High-level input voltage	B port	V_{REF} + 50 mV			V
		Except B port	2			
V_{IL}	Low-level input voltage	B port			V_{REF} – 50 mV	V
		Except B port			0.8	
I_{IK}	Input clamp current				–18	mA
I_{OH}	High-level output current	A port			–32	mA
I_{OL}	Low-level output current	A port			64	mA
		B port			34	
T_A	Operating free-air temperature		–40		85	°C

(1) All unused control inputs of the device must be held at V_{CC} or GND to ensure proper device operation. Refer to the TI application report *Implications of Slow or Floating CMOS Inputs*, literature number SCBA004.
(2) Normal connection sequence is GND first, V_{CC} = 5 V second, and V_{CC} = 3.3 V, I/O, control inputs, V_{TT}, and V_{REF} (any order) last.
(3) V_{TT} and R_{TT} can be adjusted to accommodate backplane impedances if the dc recommended I_{OL} ratings are not exceeded.
(4) V_{REF} can be adjusted to optimize noise margins, but normally is two-thirds V_{TT}.

Electrical Characteristics

over recommended operating free-air temperature range (unless otherwise noted)

				V_I = 2 V	–75			
				V_I = 0 to V_{CC} (3.3 V)(2)			±500	
I_{OZH}	A port	V_{CC} (3.3 V) = 3.45 V,	V_{CC} (5 V) = 5.25 V,	V_O = V_{CC} (3.3 V)			1	µA
	B port	V_{CC} (3.3 V) = 3.45 V,	V_{CC} (5 V) = 5.25 V,	V_O = 1.5 V			10	
I_{OZL}	A port	V_{CC} (3.3 V) = 3.45 V,	V_{CC} (5 V) = 5.25 V,	V_O = 0			–1	µA
	B port	V_{CC} (3.3 V) = 3.45 V,	V_{CC} (5 V) = 5.25 V,	V_O = 0.65 V			–10	
I_{CC} (3.3 V)	A or B port	V_{CC} (3.3 V) = 3.45 V, V_{CC} (5 V) = 5.25 V, I_O = 0, V_I = V_{CC} (3.3 V) or GND(3), V_I = V_{TT} or GND(4)		Outputs high			1	mA
				Outputs low			5	
				Outputs disabled			1	
I_{CC} (5 V)	A or B port	V_{CC} (3.3 V) = 3.45 V, V_{CC} (5 V) = 5.25 V, I_O = 0, V_I = V_{CC} (3.3 V) or GND(3), V_I = V_{TT} or GND(4)		Outputs high			120	mA
				Outputs low			120	
				Outputs disabled			120	
ΔI_{CC} (3.3 V)(5)		V_{CC} (3.3 V) = 3.45 V, V_{CC} (5 V) = 5.25 V, One A-port or control input at 2.7 V, Other A-port or control inputs at V_{CC} (3.3 V) or GND					1	mA
C_i	Control inputs	V_I = 3.15 V or 0				4		pF
C_{io}	A port	V_O = 3.15 V or 0				8.5		pF
	B port	V_O = 1.5 V or 0				8		

(1) All typical values are at V_{CC} (3.3 V) = 3.3 V, V_{CC} (5 V) = 5 V, T_A = 25°C.
(2) This is the bus-hold maximum dynamic current. It is the minimum overdrive current required to switch the input from one state to another.
(3) This is the V_I for A-port or control inputs.
(4) This is the V_I for B port.
(5) This is the increase in supply current for each input that is at the specified TTL voltage level, rather than V_{CC} or GND.

Timing Requirements

over recommended ranges of supply voltage and operating free-air temperature, V_{TT} = 1.5 V and V_{REF} = 1 V for GTLP (unless otherwise noted) (see Figure 1)

			MIN	MAX	UNIT
f_{clock}	Clock frequency			85	MHz
t_w	Pulse duration	LEAB or LEBA high	3.3		ns
		CLKAB or CLKBA high or low	5.7		
t_{su}	Setup time	A before CLKAB↑	1		ns
		B before CLKBA↑	1.8		
		A before LEAB↓	0.5		
		B before LEBA↓	1.2		
		$\overline{CEAB}$ before CLKAB↑	1.2		
		$\overline{CEBA}$ before CLKBA↑	1.4		
t_h	Hold time	A after CLKAB↑	1.9		ns
		B after CLKBA↑	0.5		
		A after LEAB↓	2.7		
		B after LEBA↓	3.5		
		$\overline{CEAB}$ after CLKAB↑	1.2		
		$\overline{CEBA}$ after CLKBA↑	1.1		

Switching Characteristics

over recommended ranges of supply voltage and operating free-air temperature, V_{TT} = 1.5 V and V_{REF} = 1 V for GTLP (see Figure 1)

PARAMETER	FROM (INPUT)	TO (OUTPUT)	MIN	TYP(1)	MAX	UNIT

NOTES: A. C_L includes probe and jig capacitance.
B. Waveform 1 is for an output with internal conditions such that the output is low, except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high, except when disabled by the output control.
C. All input pulses are supplied by generators having the following characteristics: PRR ≤ 10 MHz, Z_O = 50 Ω, t_r ≤ 2.5 ns, t_f ≤ 2.5 ns.
D. The outputs are measured one at a time, with one transition per measurement.

Figure 1. Load Circuits and Voltage Waveforms

Distributed-Load Backplane Switching Characteristics

The previous switching characteristics table shows the switching characteristics of the device into a lumped load (Figure 1). However, the designer's backplane application probably is a distributed load. The physical representation is shown in Figure 2. This backplane, or distributed load, can be approximated closely to an RLC circuit, as shown in Figure 3. This device has been designed for optimum performance in this RLC circuit. The following switching characteristics table shows the switching characteristics of the device into the RLC load, to help the designer better understand the performance of the GTLP device in this typical backplane. See www.ti.com/sc/gtlp for more information.

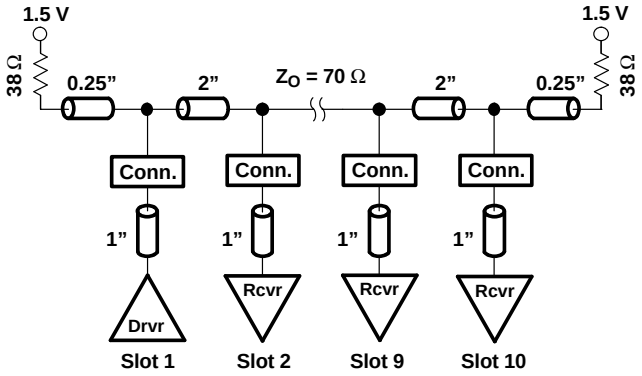

Figure 2. Medium-Drive Test Backplane

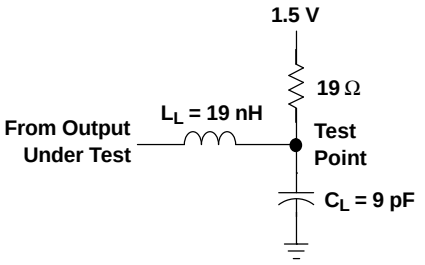

Figure 3. Medium-Drive RLC Network

Switching Characteristics

over recommended ranges of supply voltage and operating free-air temperature,
V_{TT} = 1.5 V and V_{REF} = 1 V for GTLP (see Figure 3)

PARAMETER	FROM (INPUT)	TO (OUTPUT)	MIN	TYP(1)	UNIT

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
TBD: The Pb-Free/Green conversion plan has not been defined.
Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.
Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.
Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
