

- Low Supply-Voltage Range, 1.8 V to 3.6 V
- Ultralow-Power Consumption:
  - Active Mode: 200  $\mu$ A at 1 MHz, 2.2 V
  - Standby Mode: 0.7  $\mu$ A
  - Off Mode (RAM Retention): 0.1  $\mu$ A
- Five Power-Saving Modes
- Wake-Up From Standby Mode in Less Than 6  $\mu$ s
- Frequency-Locked Loop, FLL+
- 16-Bit RISC Architecture, 125-ns Instruction Cycle Time
- Scan IF for Background Water, Heat, and Gas Volume Measurement
- 16-Bit Timer\_A With Three Capture/Compare Registers
- 16-Bit Timer\_A With Five Capture/Compare Registers
- Integrated LCD Driver for Up to 96 Segments
- On-Chip Comparator
- Serial Onboard Programming, No External Programming Voltage Needed
- Programmable Code Protection by Security Fuse
- Brownout Detector
- Supply Voltage Supervisor/Monitor With Programmable Level Detection
- Bootstrap Loader in Flash Devices
- Family Members Include:
  - MSP430FW423:  
8KB + 256B Flash Memory,  
256B RAM
  - MSP430FW425:  
16KB + 256B Flash Memory,  
512B RAM
  - MSP430FW427:  
32KB + 256B Flash Memory,  
1KB RAM
- Available in 64-Pin Quad Flat Pack (QFP)
- For Complete Module Descriptions, Refer to the *MSP430x4xx Family User's Guide*, Literature Number SLAU056

## description

The Texas Instruments MSP430 family of ultralow-power microcontrollers consists of several devices featuring different sets of peripherals targeted for various applications. The architecture, combined with five low power modes, is optimized to achieve extended battery life in portable measurement applications. The device features a powerful 16-bit RISC CPU, 16-bit registers, and constant generators that contribute to maximum code efficiency. The digitally controlled oscillator (DCO) allows wake-up from low-power modes to active mode in less than 6  $\mu$ s.

The MSP430xW42x series are microcontroller configurations with two built-in 16-bit timers, a comparator, 96 LCD segment drive capability, a scan interface, and 48 I/O pins.

Typical applications include sensor systems that capture analog signals, convert them to digital values, and process the data and transmit them to a host system. The comparator and timers make the configurations ideal for gas, heat, and water meters, industrial meters, counter applications, handheld meters, etc.

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage. ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications. These devices have limited built-in ESD protection.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

## Terminal Functions

TERMINAL NAME	NO.	I/O	DESCRIPTION
AV <sub>CC</sub>	64		Analog supply voltage, positive terminal. Supplies SVS, brownout, oscillator, comparator_A, scan IF AFE, port 6, and LCD resistive divider circuitry; must not power up prior to DV <sub>CC</sub> .
AV <sub>SS</sub>	62		Analog supply voltage, negative terminal. Supplies SVS, brownout, oscillator, comparator_A, scan IF AFE, and port 6. Must be externally connected to DV <sub>SS</sub> . Internally connected to DV <sub>SS</sub> .
DV <sub>CC</sub>	1		Digital supply voltage, positive terminal.
DV <sub>SS</sub>	63		Digital supply voltage, negative terminal.
SIFVSS	10		Scan IF AFE reference supply voltage.
P1.0/TA0.0	53	I/O	General-purpose digital I/O/Timer0_A. Capture: CCI0A input, compare: Out0 output/BSL transmit
P1.1/TA0.0/MCLK	52	I/O	General-purpose digital I/O/Timer0_A. Capture: CCI0B input/MCLK output/BSL receive Note: TA0.0 is only an input on this pin.
P1.2/TA0.1	51	I/O	General-purpose digital I/O/Timer0_A, capture: CCI1A input, compare: Out1 output
P1.3/TA1.0/ SVSOUT	50	I/O	General-purpose digital I/O/Timer1_A, capture: CCI0B input/SVS: output of SVS comparator Note: TA1.0 is only an input on this pin.
P1.4/TA1.0	49	I/O	General-purpose digital I/O/Timer1_A, capture: CCI0A input, compare: Out0 output
P1.5/TA0CLK/ ACLK	48	I/O	General-purpose digital I/O/input of Timer0_A clock/output of ACLK
P1.6/CA0	47	I/O	General-purpose digital I/O/Comparator_A input
P1.7/CA1	46	I/O	General-purpose digital I/O/Comparator_A input
P2.0/TA0.2	45	I/O	General-purpose digital I/O/Timer0_A, capture: CCI2A input, compare: Out2 output
P2.1/TA1.1	44	I/O	General-purpose digital I/O/Timer0_A, capture: CCI1A input, compare: Out1 output
P2.2/TA1.2/S23	35	I/O	General-purpose digital I/O/Timer1_A, capture: CCI2A input, compare: Out2 output/LCD segment output 23 (see Note)
P2.3/TA1.3/S22	34	I/O	General-purpose digital I/O/Timer1_A, capture: CCI3A input, compare: Out3 output/LCD segment output 22 (see Note)
P2.4/TA1.4/S21	33	I/O	General-purpose digital I/O/Timer1_A, capture: CCI4A input, compare: Out4 output/LCD segment output 21 (see Note)
P2.5/TA1CLK/S20	32	I/O	General-purpose digital I/O/input of Timer1_A clock/LCD segment output 20 (see Note)
P2.6/CAOUT/S19	31	I/O	General-purpose digital I/O/Comparator_A output/LCD segment output 19 (see Note)
P2.7/SIFCLKG/ S18	30	I/O	General-purpose digital I/O/Scan IF, signal SIFCLKG from internal clock generator/LCD segment output 18 (see Note)
P3.0/S17	29	I/O	General-purpose digital I/O/ LCD segment output 17 (see Note)
P3.1/S16	28	I/O	General-purpose digital I/O/ LCD segment output 16 (see Note)
P3.2/S15	27	I/O	General-purpose digital I/O/ LCD segment output 15 (see Note)
P3.3/S14	26	I/O	General-purpose digital I/O/ LCD segment output 14 (see Note)
P3.4/S13	25	I/O	General-purpose digital I/O/LCD segment output 13 (see Note)
P3.5/S12	24	I/O	General-purpose digital I/O/LCD segment output 12 (see Note)
P3.6/S11	23	I/O	General-purpose digital I/O/LCD segment output 11 (see Note)
P3.7/S10	22	I/O	General-purpose digital I/O/LCD segment output 10 (see Note)

NOTE: LCD function selected automatically when applicable LCD module control bits are set, not with PxSEL bits.

P5.1/S0	12	I/O	General-purpose digital I/O/LCD segment output 0 (see Note)
COM0	36	O	Common output. COM0–3 are used for LCD backplanes
P5.2/COM1	37	I/O	General-purpose digital I/O/common output. COM0–3 are used for LCD backplanes
P5.3/COM2	38	I/O	General-purpose digital I/O/common output. COM0–3 are used for LCD backplanes
P5.4/COM3	39	I/O	General-purpose digital I/O/common output. COM0–3 are used for LCD backplanes
R03	40	I	Input port of fourth positive (lowest) analog LCD level (V5)
P5.5/R13	41	I/O	General-purpose digital I/O/input port of third most positive analog LCD level (V4 or V3)
P5.6/R23	42	I/O	General-purpose digital I/O/input port of second most positive analog LCD level (V2)
P5.7/R33	43	I/O	General-purpose digital I/O/output port of most positive analog LCD level (V1)
P6.0/SIFCH0	59	I/O	General-purpose digital I/O/Scan IF, channel 0 sensor excitation output and signal input
P6.1/SIFCH1	60	I/O	General-purpose digital I/O/Scan IF, channel 1 sensor excitation output and signal input
P6.2/SIFCH2	61	I/O	General-purpose digital I/O/Scan IF, channel 2 sensor excitation output and signal input
P6.3/SIFCH3/ SIFCAOUT	2	I/O	General-purpose digital I/O/Scan IF, channel 3 sensor excitation output and signal input/Scan IF comparator output
P6.4/SIFCI0	3	I/O	General-purpose digital I/O/Scan IF, channel 0 signal input to comparator
P6.5/SIFCI1	4	I/O	General-purpose digital I/O/Scan IF, channel 1 signal input to comparator
P6.6/SIFCI2/ SIFDACOUT	5	I/O	General-purpose digital I/O/Scan IF, channel 2 signal input to comparator/10-bit DAC output
P6.7/ SIFCI3/SVSIN	6	I/O	General-purpose digital I/O/Scan IF, channel 3 signal input to comparator/SVS, analog input
SIFCI	7	I	Scan IF input to Comparator.
SIFCOM	11	O	Common termination for Scan IF sensors.
RST/NMI	58	I	Reset input or nonmaskable interrupt input port.
TCK	57	I	Test clock. TCK is the clock input port for device programming and test.
TDI/TCLK	55	I	Test data input or test clock input. The device protection fuse is connected to TDI/TCLK.
TDO/TDI	54	I/O	Test data output port. TDO/TDI data output or programming data input terminal.
TMS	56	I	Test mode select. TMS is used as an input port for device programming and test.
XIN	8	I	Input port for crystal oscillator XT1. Standard or watch crystals can be connected.
XOUT	9	O	Output terminal of crystal oscillator XT1.

NOTE: LCD function selected automatically when applicable LCD module control bits are set, not with PxSEL bits.

SLAS383B – OCTOBER 2003 – REVISED JUNE 2007

## short-form description

### CPU

The MSP430 CPU has a 16-bit RISC architecture that is highly transparent to the application. All operations, other than program-flow instructions, are performed as register operations in conjunction with seven addressing modes for source operand and four addressing modes for destination operand.

The CPU is integrated with 16 registers that provide reduced instruction execution time. The register-to-register operation execution time is one cycle of the CPU clock.

Four of the registers, R0 to R3, are dedicated as program counter, stack pointer, status register, and constant generator respectively. The remaining registers are general-purpose registers.

Peripherals are connected to the CPU using data, address, and control buses, and can be handled with all instructions.

### instruction set

The instruction set consists of 51 instructions with three formats and seven address modes. Each instruction can operate on word and byte data. Table 1 shows examples of the three types of instruction formats; the address modes are listed in Table 2.

Program Counter	PC/R0
Stack Pointer	SP/R1
Status Register	SR/CG1/R2
Constant Generator	CG2/R3
General-Purpose Register	R4
General-Purpose Register	R5
General-Purpose Register	R6
General-Purpose Register	R7
General-Purpose Register	R8
General-Purpose Register	R9
General-Purpose Register	R10
General-Purpose Register	R11
General-Purpose Register	R12
General-Purpose Register	R13
General-Purpose Register	R14
General-Purpose Register	R15

**Table 1. Instruction Word Formats**

Dual operands, source-destination	e.g. ADD R4,R5	R4 + R5 ----> R5
Single operands, destination only	e.g. CALL R8	PC --->(TOS), R8---> PC
Relative jump, un/conditional	e.g. JNE	Jump-on-equal bit = 0

**Table 2. Address Mode Descriptions**

ADDRESS MODE	S	D	SYNTAX	EXAMPLE	OPERATION
Register	•	•	MOV Rs,Rd	MOV R10,R11	R10 --> R11
Indexed	•	•	MOV X(Rn),Y(Rm)	MOV 2(R5),6(R6)	M(2+R5)---> M(6+R6)
Symbolic (PC relative)	•	•	MOV EDE,TONI		M(EDE) ---> M(TONI)
Absolute	•	•	MOV &MEM,&TCDAT		M(MEM) ---> M(TCDAT)
Indirect	•		MOV @Rn,Y(Rm)	MOV @R10,Tab(R6)	M(R10) ---> M(Tab+R6)
Indirect autoincrement	•		MOV @Rn+,Rm	MOV @R10+,R11	M(R10) ---> R11 R10 + 2---> R10
Immediate	•		MOV #X,TONI	MOV #45,TONI	#45 ---> M(TONI)

NOTE: S = source D = destination

POST OFFICE BOX 655303 • DALLAS, TEXAS 75265

## operating modes

The MSP430 has one active mode and five software selectable low-power modes of operation. An interrupt event can wake up the device from any of the five low-power modes, service the request and restore back to the low-power mode on return from the interrupt program.

The following six operating modes can be configured by software:

- Active mode (AM)
  - All clocks are active
- Low-power mode 0 (LPM0)
  - CPU is disabled  
ACLK and SMCLK remain active, MCLK is available to modules  
FLL+ loop control remains active
- Low-power mode 1 (LPM1)
  - CPU is disabled  
ACLK and SMCLK remain active, MCLK is available to modules  
FLL+ loop control is disabled
- Low-power mode 2 (LPM2)
  - CPU is disabled  
MCLK, FLL+ loop control, and DCOCLK are disabled  
DCO's dc-generator remains enabled  
ACLK remains active
- Low-power mode 3 (LPM3)
  - CPU is disabled  
MCLK, FLL+ loop control, and DCOCLK are disabled  
DCO's dc-generator is disabled  
ACLK remains active
- Low-power mode 4 (LPM4)
  - CPU is disabled  
ACLK is disabled  
MCLK, FLL+ loop control, and DCOCLK are disabled  
DCO's dc-generator is disabled  
Crystal oscillator is stopped

# MSP430xW42x MIXED SIGNAL MICROCONTROLLER

SLAS383B – OCTOBER 2003 – REVISED JUNE 2007

## interrupt vector addresses

The interrupt vectors and the power-up starting address are located in the address range 0FFFh – 0FFE0h. The vector contains the 16-bit address of the appropriate interrupt-handler instruction sequence.

INTERRUPT SOURCE	INTERRUPT FLAG	SYSTEM INTERRUPT	WORD ADDRESS	PRIORITY
Power-up External Reset Watchdog Flash memory	WDTIFG KEYV (see Note 1)	Reset	0FFFEh	15, highest
NMI Oscillator Fault Flash memory access violation	NMIIFG OFIFG ACCVIFG (see Notes 1 & 3)	(Non)maskable (Non)maskable (Non)maskable	0FFFCh	14
Timer1_A5	TA1CCR0 CCIFG (see Note 2)	Maskable	0FFFAh	13
Timer1_A5	TA1CCR1 CCIFG to TA1CCR4 CCIFG, TA1CTL TAIFG (see Notes 1 & 2)	Maskable	0FFF8h	12
Comparator_A	CMPAIFG	Maskable	0FFF6h	11
Watchdog Timer	WDTIFG	Maskable	0FFF4h	10
Scan IF	SIFIFG0 to SIFIFG6 (See Note 1)	Maskable	0FFF2h	9
			0FFF0h	8
			0FEEh	7
Timer0_A3	TA0CCR0 CCIFG (see Note 2)	Maskable	0FEECh	6
Timer0_A3	TA0CCR1 CCIFG, TA0CCR2 CCIFG, TA0CTL TAIFG (see Notes 1 & 2)	Maskable	0FEEAh	5
I/O port P1 (eight flags)	P1IFG.0 to P1IFG.7 (see Notes 1 & 2)	Maskable	0FFE8h	4
			0FFE6h	3
			0FFE4h	2
I/O port P2 (eight flags)	P2IFG.0 to P2IFG.7 (see Notes 1 & 2)	Maskable	0FFE2h	1
Basic Timer1	BTIFG	Maskable	0FFE0h	0, lowest

- NOTES: 1. Multiple source flags  
 2. Interrupt flags are located in the module.  
 3. (Non)maskable: the individual interrupt-enable bit can disable an interrupt event, but the general interrupt-enable cannot.

## special function registers

Most interrupt and module enable bits are collected into the lowest address space. Special function register bits that are not allocated to a functional purpose are not physically present in the device. Simple software access is provided with this arrangement.

### interrupt enable 1 and 2

- WDTIE: Watchdog-timer interrupt enable. Inactive if watchdog mode is selected. Active if watchdog timer is configured in interval timer mode.
- OFIE: Oscillator-fault-interrupt enable
- NMIIE: Nonmaskable-interrupt enable
- ACCVIE: Flash access violation interrupt enable
- BTIE: Basic Timer1 interrupt enable

### interrupt flag register 1 and 2

- WDTIFG: Set on watchdog-timer overflow (in watchdog mode) or security key violation. Reset with  $V_{CC}$  power-up, or a reset condition at the  $\overline{RST}/NMI$  pin in reset mode.
- OFIFG: Flag set on oscillator fault
- NMIIFG: Set via  $\overline{RST}/NMI$  pin
- BTIFG: Basic Timer1 interrupt flag

### module enable registers 1 and 2

- Legend: rw: Bit Can Be Read and Written
- rw-0,1: Bit Can Be Read and Written. It Is Reset or Set by PUC.
  - rw-(0,1): Bit Can Be Read and Written. It Is Reset or Set by POR.
  - SFR Bit Not Present in Device

## bootstrap loader (BSL)

The MSP430 bootstrap loader (BSL) enables users to program the flash memory or RAM using a UART serial interface. Access to the MSP430 memory via the BSL is protected by user-defined password. For complete description of the features of the BSL and its implementation, see the Application report *Features of the MSP430 Bootstrap Loader*, Literature Number SLAA089.

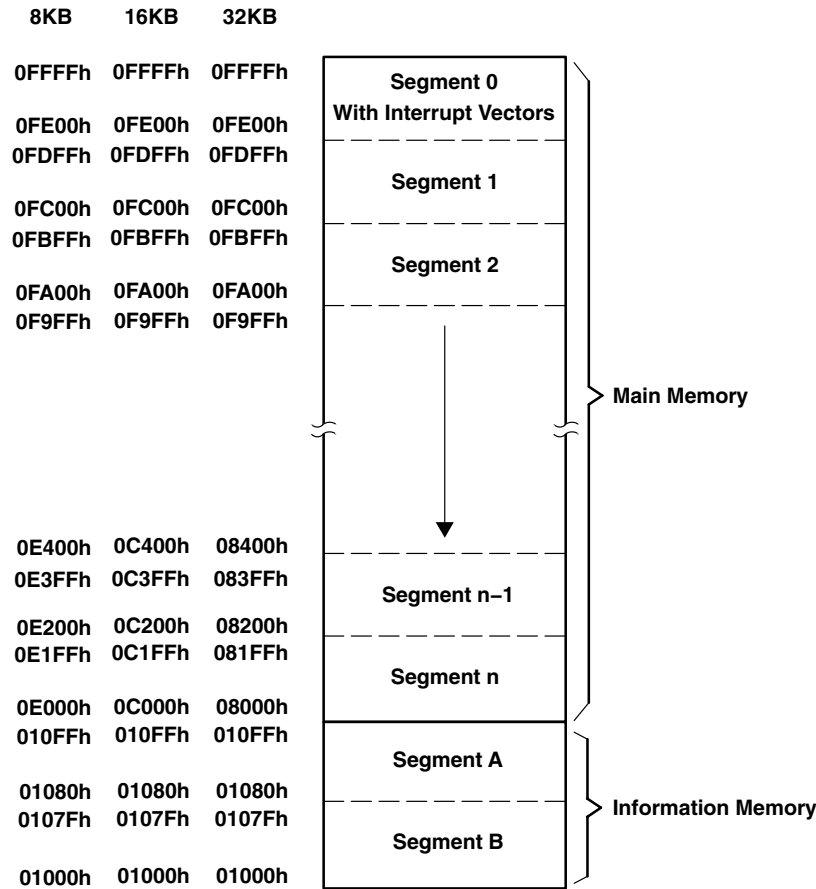

BSL Function	PM Package Pins
Data Transmit	53 - P1.0
Data Receive	52 - P1.1

## flash memory

The flash memory can be programmed via the JTAG port, the bootstrap loader, or in-system by the CPU. The CPU can perform single-byte and single-word writes to the flash memory. Features of the flash memory include:

- Flash memory has n segments of main memory and two segments of information memory (A and B) of 128 bytes each. Each segment in main memory is 512 bytes in size.
- Segments 0 to n may be erased in one step, or each segment may be individually erased.
- Segments A and B can be erased individually, or as a group with segments 0–n. Segments A and B are also called *information memory*.
- New devices may have some bytes programmed in the information memory (needed for test during manufacturing). The user should perform an erase of the information memory prior to the first use.

**flash memory (continued)**

**peripherals**

Peripherals are connected to the CPU through data, address, and control busses and can be handled using all instructions. For complete module descriptions, refer to the *MSP430x4xx Family User's Guide*, literature number SLAU056.

**oscillator and system clock**

The clock system in the MSP430xW42x family of devices is supported by the FLL+ module that includes support for a 32768-Hz watch crystal oscillator, an internal digitally-controlled oscillator (DCO) and a high frequency crystal oscillator. The FLL+ clock module is designed to meet the requirements of both low system cost and low-power consumption. The FLL+ features a digital frequency locked loop (FLL) hardware which in conjunction with a digital modulator stabilizes the DCO frequency to a programmable multiple of the watch crystal frequency. The internal DCO provides a fast turn-on clock source and stabilizes in less than 6 μs. The FLL+ module provides the following clock signals:

- Auxiliary clock (ACLK), sourced from a 32768-Hz watch crystal or a high frequency crystal.
- Main clock (MCLK), the system clock used by the CPU.
- Sub-Main clock (SMCLK), the sub-system clock used by the peripheral modules.
- ACLK/n, the buffered output of ACLK, ACLK/2, ACLK/4, or ACLK/8.

# MSP430xW42x MIXED SIGNAL MICROCONTROLLER

SLAS383B – OCTOBER 2003 – REVISED JUNE 2007

---

## brownout, supply voltage supervisor

The brownout circuit is implemented to provide the proper internal reset signal to the device during power on and power off. The supply voltage supervisor (SVS) circuitry detects if the supply voltage drops below a user selectable level and supports both supply voltage supervision (the device is automatically reset) and supply voltage monitoring (SVM, the device is not automatically reset).

The CPU begins code execution after the brownout circuit releases the device reset. However,  $V_{CC}$  may not have ramped to  $V_{CC(min)}$  at that time. The user must insure the default FLL+ settings are not changed until  $V_{CC}$  reaches  $V_{CC(min)}$ . If desired, the SVS circuit can be used to determine when  $V_{CC}$  reaches  $V_{CC(min)}$ .

## digital I/O

There are six 8-bit I/O ports implemented—ports P1 through P6:

- All individual I/O bits are independently programmable.
- Any combination of input, output, and interrupt conditions is possible.
- Edge-selectable interrupt input capability for all the eight bits of ports P1 and P2.
- Read/write access to port-control registers is supported by all instructions.

## Basic Timer1

The Basic Timer1 has two independent 8-bit timers which can be cascaded to form a 16-bit timer/counter. Both timers can be read and written by software. The Basic Timer1 can be used to generate periodic interrupts and clock for the LCD module.

## LCD drive

The LCD driver generates the segment and common signals required to drive an LCD display. The LCD controller has dedicated data memory to hold segment drive information. Common and segment signals are generated as defined by the mode. Static, 2-MUX, 3-MUX, and 4-MUX LCDs are supported by this peripheral.

## watchdog timer

The primary function of the watchdog timer (WDT) module is to perform a controlled system restart after a software problem occurs. If the selected time interval expires, a system reset is generated. If the watchdog function is not needed in an application, the module can be configured as an interval timer and can generate interrupts at selected time intervals.

## comparator\_A

The primary function of the comparator\_A module is to support precision slope analog-to-digital conversions, battery-voltage supervision, and monitoring of external analog signals.

## scan IF

The scan interface is used to measure linear or rotational motion and supports LC and resistive sensors such as GMR sensors. The scan IF incorporates a  $V_{CC}/2$  generator, a comparator, and a 10-bit DAC and supports up to four sensors.

### timer0\_A3

Timer0\_A3 is a 16-bit timer/counter with three capture/compare registers. Timer0\_A3 can support multiple capture/compares, PWM outputs, and interval timing. Timer0\_A3 also has extensive interrupt capabilities. Interrupts may be generated from the counter on overflow conditions and from each of the capture/compare registers.

**absolute maximum ratings†**

Voltage applied at $V_{CC}$ to $V_{SS}$ .....	-0.3 V to + 4.1 V
Voltage applied to any pin (see Note) .....	-0.3 V to $V_{CC}$ + 0.3 V
Diode current at any device terminal .....	±2 mA
Storage temperature (unprogrammed device) .....	-55°C to 150°C
Storage temperature (programmed device) .....	-40°C to 85°C

† Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTE: All voltages referenced to  $V_{SS}$ . The JTAG fuse-blow voltage,  $V_{FB}$ , is allowed to exceed the absolute maximum rating. The voltage is applied to the TDI/TCLK pin when blowing the JTAG fuse.

# MSP430xW42x MIXED SIGNAL MICROCONTROLLER

SLAS383B – OCTOBER 2003 – REVISED JUNE 2007

## recommended operating conditions

PARAMETER		MIN	NOM	MAX	UNITS	
Supply voltage during program execution (see Note 1), $V_{CC}$ ( $AV_{CC} = DV_{CC} = V_{CC}$ )	MSP430xW42x	1.8		3.6	V	
Supply voltage during program execution, SVS enabled, PORON = 1 (see Note 1 and Note 2), $V_{CC}$ ( $AV_{CC} = DV_{CC} = V_{CC}$ )	MSP430xW42x	2.0		3.6	V	
Supply voltage during programming flash memory (see Note 1), $V_{CC}$ ( $AV_{CC} = DV_{CC} = V_{CC}$ )	MSP430FW42x	2.7		3.6	V	
Supply voltage, $V_{SS}$ ( $AV_{SS} = DV_{SS} = V_{SS}$ )		0		0	V	
Operating free-air temperature range, $T_A$	MSP430xW42x	-40		85	°C	
LFXT1 crystal frequency, $f_{(LFXT1)}$ (see Note 3)	LF selected, XTS_FLL=0	Watch crystal		32768	Hz	
	XT1 selected, XTS_FLL=1	Ceramic resonator		450	8000	kHz
	XT1 selected, XTS_FLL=1	Crystal		1000	8000	kHz
Processor frequency (signal MCLK), $f_{(System)}$	$V_{CC} = 1.8$ V	DC		4.15	MHz	
	$V_{CC} = 3.6$ V	DC		8		

- NOTES: 1. It is recommended to power  $AV_{CC}$  and  $DV_{CC}$  from the same source. A maximum difference of 0.3 V between  $AV_{CC}$  and  $DV_{CC}$  can be tolerated during power up and operation.
2. The minimum operating supply voltage is defined according to the trip point where POR is going active by decreasing supply voltage. POR is going inactive when the supply voltage is raised above minimum supply voltage plus the hysteresis of the SVS circuitry.
3. In LF mode, the LFXT1 oscillator requires a watch crystal. In XT1 mode, LFXT1 accepts a ceramic resonator or a crystal.

Figure 1. Maximum Frequency vs Supply Voltage

**electrical characteristics over recommended operating free-air temperature (unless otherwise noted)**

					T <sub>A</sub> = 85°C	0.8	2.5		

- NOTES: 1. All inputs are tied to 0 V or V<sub>CC</sub>. Outputs do not source or sink any current. The current consumption is measured with active Basic Timer1 and LCD (ACLK selected).  
The current consumption of the Comparator\_A and the SVS module are specified in the respective sections.
2. The LPM3 currents are characterized with a KDS Daishinku DT-38 (6 pF) crystal.
3. Current for brownout included.

**current consumption of active mode versus system frequency**

$$I_{(AM)} = I_{(AM)} [1 \text{ MHz}] \times f_{(\text{System})} [\text{MHz}]$$

**current consumption of active mode versus supply voltage**

$$I_{(AM)} = I_{(AM)} [3 \text{ V}] + 140 \mu\text{A/V} \times (V_{CC} - 3 \text{ V})$$

# MSP430xW42x MIXED SIGNAL MICROCONTROLLER

SLAS383B – OCTOBER 2003 – REVISED JUNE 2007

electrical characteristics over recommended operating free-air temperature (unless otherwise noted) (continued)

Schmitt-trigger inputs – Ports P1, P2, P3, P4, P5, and P6;  $\overline{\text{RST}}/\text{NMI}$ ; JTAG: TCK, TMS, TDI/TCLK

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
$V_{IT+}$	Positive-going input threshold voltage	$V_{CC} = 2.2 \text{ V}$	1.1		1.5	V
		$V_{CC} = 3 \text{ V}$	1.5		1.9	
$V_{IT-}$	Negative-going input threshold voltage	$V_{CC} = 2.2 \text{ V}$	0.4		0.9	V
		$V_{CC} = 3 \text{ V}$	0.9		1.3	
$V_{hys}$	Input voltage hysteresis ( $V_{IT+} - V_{IT-}$ )	$V_{CC} = 2.2 \text{ V}$	0.3		1.1	V
		$V_{CC} = 3 \text{ V}$	0.45		1	

inputs Px.x, TAx.x

PARAMETER		TEST CONDITIONS	$V_{CC}$	MIN	TYP	MAX	UNIT
$t_{(int)}$	External interrupt timing	Port P1, P2: P1.x to P2.x, External trigger signal for the interrupt flag, (see Note 1)	2.2 V/3 V	1.5			cycle
			2.2 V	62			ns
			3 V	50			
$t_{(cap)}$	Timer_A, capture timing	TAx.x	2.2 V	62			ns
			3 V	50			
$f_{(TAext)}$	Timer_A clock frequency externally applied to pin	TAxCLK, INCLK $t_{(H)} = t_{(L)}$	2.2 V			8	MHz
			3 V			10	
$f_{(TAint)}$	Timer_A clock frequency	SMCLK or ACLK signal selected	2.2 V			8	MHz
			3 V			10	

NOTES: 1. The external signal sets the interrupt flag every time the minimum  $t_{(int)}$  cycle and time parameters are met. It may be set even with trigger signals shorter than  $t_{(int)}$ . Both the cycle and timing specifications must be met to ensure the flag is set.  $t_{(int)}$  is measured in MCLK cycles.

leakage current – Ports P1, P2, P3, P4, P5, and P6 (see Note 1)

PARAMETER			TEST CONDITIONS		MIN	NOM	MAX	UNIT
$I_{lkg}(Px.x)$	Leakage current	Port Px	Port x: $V_{(Px.x)}$ (see Note 2)	$V_{CC} = 2.2 \text{ V}/3 \text{ V}$			±50	nA

NOTES: 1. The leakage current is measured with  $V_{SS}$  or  $V_{CC}$  applied to the corresponding pin(s), unless otherwise noted.  
2. The port pin must be selected as an input.

**electrical characteristics over recommended operating free-air temperature (unless otherwise noted) (continued)**

**outputs – Ports P1, P2, P3, P4, P5, and P6**

			V <sub>CC</sub> = 3 V	80	150	240	
		T <sub>A</sub> = 25°C, Overdrive 10 mV, with filter: CAF = 1	V <sub>CC</sub> = 2.2 V	1.4	1.9	3.4	μs
			V <sub>CC</sub> = 3.0 V	0.9	1.5	2.6	

- NOTES: 1. The leakage current for the Comparator\_A terminals is identical to I<sub>kg(Px.x)</sub> specification.  
 2. The input offset voltage can be cancelled by using the CAEX bit to invert the Comparator\_A inputs on successive measurements. The two successive measurements are then summed together.

# MSP430xW42x MIXED SIGNAL MICROCONTROLLER

SLAS383B – OCTOBER 2003 – REVISED JUNE 2007

electrical characteristics over recommended operating free-air temperature (unless otherwise noted) (continued)

POR brownout, reset (see Notes 1 and 2)

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
$t_{d(BOR)}$				2000	$\mu s$
$V_{CC(start)}$	$dV_{CC}/dt \leq 3 V/s$ (see Figure 10)		$0.7 \times V_{(B\_IT-)}$		V
$V_{(B\_IT-)}$	$dV_{CC}/dt \leq 3 V/s$ (see Figure 10, Figure 11, Figure 12)			1.71	V
$V_{hys(B\_IT-)}$	$dV_{CC}/dt \leq 3 V/s$ (see Figure 10)	70	130	180	mV
$t_{(reset)}$	Pulse length needed at $\overline{RST/NMI}$ pin to accepted reset internally, $V_{CC} = 2.2 V/3 V$	2			$\mu s$

- NOTES: 1. The current consumption of the brownout module is already included in the  $I_{CC}$  current consumption data. The voltage level  $V_{(B\_IT-)} + V_{hys(B\_IT-)}$  is  $\leq 1.8 V$ .
2. During power up, the CPU begins code execution following a period of  $t_{d(BOR)}$  after  $V_{CC} = V_{(B\_IT-)} + V_{hys(B\_IT-)}$ . The default FLL+ settings must not be changed until  $V_{CC} \geq V_{CC(min)}$ , where  $V_{CC(min)}$  is the minimum supply voltage for the desired operating frequency. See the *MSP430x4xx Family User's Guide* (SLAU056) for more information on the brownout/SVS circuit.

		OSCCAP <sub>x</sub> = 3h	2.2 V/3 V		18		
V <sub>IL</sub>	Input levels at XIN	see Note 3	2.2 V/3 V	V <sub>SS</sub>		0.2×V <sub>CC</sub>	V
V <sub>IH</sub>				0.8×V <sub>CC</sub>		V <sub>CC</sub>	

- NOTES:
- The parasitic capacitance from the package and board may be estimated to be 2pF. The effective load capacitor for the crystal is  $(C_{XIN} \times C_{XOUT}) / (C_{XIN} + C_{XOUT})$ . It is independent of XTS\_FLL.
  - To improve EMI on the low-power LFXT1 oscillator, particularly in the LF mode (32 kHz), the following guidelines must be observe:
    - Keep as short a trace as possible between the 'xW42x and the crystal.
    - Design a good ground plane around oscillator pins.
    - Prevent crosstalk from other clock or data lines into oscillator pins XIN and XOUT.
    - Avoid running PCB traces underneath or adjacent to XIN an XOUT pins.
    - Use assembly materials and praxis to avoid any parasitic load on the oscillator XIN and XOUT pins.
    - If conformal coating is used, ensure that it does not induce capacitive/resistive leakage between the oscillator pins.
    - Do not route the XOUT line to the JTAG header to support the serial programming adapter as shown in other documentation. This signal is no longer required for the serial programming adapter.
  - Applies only when using an external logic-level clock source. XTS\_FLL must be set. Not applicable when using a crystal or resonator.
  - External capacitance is recommended for precision real-time clock applications; OSCCAP<sub>x</sub> = 0h.

electrical characteristics over recommended operating free-air temperature (unless otherwise noted) (continued)

## Scan IF, port drive, port timing

PARAMETER		TEST CONDITIONS	V <sub>CC</sub>	MIN	TYP	MAX	UNIT
V <sub>OL(SIFCHx)</sub>	Voltage drop due to excitation transistor's on-resistance. (see Figure 18)	I <sub>(SIFCHx)</sub> = 2.0 mA, SIFTEN = 1	3 V			0.3	V
V <sub>OH(SIFCHx)</sub> (see Note 1)	Voltage drop due to damping transistor's on-resistance. (see Figure 18)	I <sub>(SIFCHx)</sub> = -200 μA, SIFTEN = 1	3 V			0.1	V
V <sub>OL(SIFCOM)</sub>		I <sub>(SIFCOM)</sub> = 3 mA, SIFSH = 1	2.2 V/3 V	0		0.1	V
I <sub>SIFCHx(tri-state)</sub>		V <sub>(SIFCHx)</sub> = 0 V to AV <sub>CC</sub> , port function disabled, SIFSH = 1	3 V	-50		50	nA
Δt <sub>dSIFCH</sub> : t <sub>wEx(tsm)</sub> - t <sub>wSIFCH</sub> (see Figure 18)	Change of pulse width of internal signal SIFEX(tsm) to pulse width at pin SIFCHx	I <sub>(SIFCHx)</sub> = 3 mA, t <sub>Ex(SIFCHx)</sub> = 500 ns ±20%	2.2 V/3 V	-20		20	ns

NOTE: 1. SIFCOM=1.5V, supplied externally. (See Figure 19).

Figure 18. P6.x/SIFCHx timing, SIFCHx function selected

Figure 19. Voltage drop due to on-resistance

**electrical characteristics over recommended operating free-air temperature (unless otherwise noted) (continued)**

**Scan IF, sample capacitor/Ri timing**

PARAMETER		TEST CONDITIONS	V <sub>CC</sub>	MIN	TYP	MAX	UNIT
C <sub>SHC(SIFCHx)</sub>	Sample capacitance at SIFCHx pin	SIFEx(tsm) = 1, SIFSH = 1	2.2 V/3 V		5	7	pF
Ri(SIFCHx)	Serial input resistance at the SIFCHx pin	SIFEx(tsm) = 1, SIFSH = 1	2.2 V/3 V		1.5	3	kΩ
t <sub>Hold</sub> (See Note 1)	Maximum hold time	ΔV <sub>sample</sub> < 3 mV		62			μs

- NOTES: 1. The sampled voltage at the sample capacitance varies less than 3 mV (ΔV<sub>sample</sub>) during the hold time t<sub>Hold</sub>. If the voltage is sampled after t<sub>Hold</sub>, the sampled voltage may be any other value.  
 2. The minimum sampling time (7.6 x tau for 1/2 LSB accuracy) with maximum C<sub>SHC(SIFCHx)</sub> and Ri(SIFCHx) and Ri(source) is t<sub>sample(min)</sub> ~ 7.6 x C<sub>SHC(SIFCHx)</sub> x (Ri(SIFCHx) + Ri(source)) with Ri(source) estimated at 3 kΩ, t<sub>sample(min)</sub> = 319 ns.

**Scan IF, V<sub>CC</sub>/2 generator**

PARAMETER		TEST CONDITIONS	V <sub>CC</sub>	MIN	TYP	MAX	UNIT
AV <sub>CC</sub>	Analog supply voltage	AV <sub>CC</sub> = DV <sub>CC</sub> (connected together) AV <sub>SS</sub> = DV <sub>SS</sub> (connected together)		2.2		3.6	V
AI <sub>CC</sub>	Scan IF V <sub>CC</sub> /2 generator operating supply current into AV <sub>CC</sub> terminal	C <sub>L</sub> at SIFCOM pin = 470 nF ±20%, f <sub>refresh(SIFCOM)</sub> = 32768 Hz	2.2 V		250	350	nA
			3 V		370	450	
f <sub>refresh(SIFCOM)</sub>	V <sub>CC</sub> /2 refresh frequency	Source clock = ACLK	2.2 V/3 V	30	32.768		kHz
V(SIFCOM)	Output voltage at pin SIFCOM	C <sub>L</sub> at SIFCOM pin = 470 nF ±20%, I <sub>Load</sub> = 1μA		AV <sub>CC</sub> /2 - .05	AV <sub>CC</sub> /2	AV <sub>CC</sub> /2 + .05	V
I <sub>source(SIFCOM)</sub>	SIFCOM source current (see Note 2 and Figure 20)		2.2 V	-500			μA
			3 V	-900			
I <sub>sink(SIFCOM)</sub>	SIFCOM sink current (see Note 2 and Figure 20)		2.2 V	150			nA
			3 V	180			
t <sub>recovery(SIFCOM)</sub>	Time to recover from Voltage Drop on Load	I <sub>Load1</sub> = I <sub>LOAD3</sub> = 0 mA I <sub>Load2</sub> = 3 mA, t <sub>load(on)</sub> = 500ns, C <sub>L</sub> at SIFCOM pin = 470 nF ±20%	2.2 V/3 V			30	μs
t <sub>on(SIFCOM)</sub>	Time to reach 98% after V <sub>CC</sub> /2 is switched on	C <sub>L</sub> at SIFCOM pin = 470 nF ±20% f <sub>refresh(SIFCOM)</sub> = 32768 Hz	2.2 V/3 V		1.7	6	ms
t <sub>VccSettle(SIFCOM)</sub> (See Note 1)	Settling time to ±V <sub>CC</sub> /512 (2 LSB) after AV <sub>CC</sub> voltage change	SIFEN = 1, SIFVCC2 = 1, SIFSH = 0, AV <sub>CC</sub> = AV <sub>CC</sub> - 100 mV f <sub>refresh(SIFCOM)</sub> = 32768 Hz	2.2 V/3 V		80		ms
		AV <sub>CC</sub> = AV <sub>CC</sub> + 100mV f <sub>refresh(SIFCOM)</sub> = 32768 Hz	2.2 V/3 V		3		

- NOTES: 1. The settling time after an AV<sub>CC</sub> voltage change is the time to for the voltage at pin SIFCOM to settle to AV<sub>CC</sub>/2 ± 2LSB.  
 2. The sink and source currents are a function of the voltage at the pin SIFCOM. The maximum currents are reached if SIFCOM is shorted to GND or V<sub>CC</sub>. Due to the topology of the output section (refer to Figure 20) the V<sub>CC</sub>/2 generator can source relatively large currents but can sink only small currents.

I <sub>PGM</sub>	Supply current from DV <sub>CC</sub> during program		2.7 V/ 3.6 V		3	5	mA
I <sub>ERASE</sub>	Supply current from DV <sub>CC</sub> during erase		2.7 V/ 3.6 V		3	7	mA
t <sub>CPT</sub>	Cumulative program time	see Note 1	2.7 V/ 3.6 V			10	ms
t <sub>CMErase</sub>	Cumulative mass erase time	see Note 2	2.7 V/ 3.6 V	200			ms
	Program/Erase endurance			10 <sup>4</sup>	10 <sup>5</sup>		cycles
t <sub>Retention</sub>	Data retention duration	T <sub>J</sub> = 25°C		100			years
t <sub>Word</sub>	Word or byte program time	see Note 3					t <sub>FTG</sub>
t <sub>Block, 0</sub>	Block program time for 1 <sup>st</sup> byte or word						
t <sub>Block, 1-63</sub>	Block program time for each additional byte or word						
t <sub>Block, End</sub>	Block program end-sequence wait time						
t <sub>Mass Erase</sub>	Mass erase time						
t <sub>Seg Erase</sub>	Segment erase time						

- NOTES: 1. The cumulative program time must not be exceeded when writing to a 64-byte flash block. This parameter applies to all programming methods: individual word/byte write and block write modes.
2. The mass erase duration generated by the flash timing generator is at least 11.1 ms (= 5297x1/f<sub>FTG,max</sub> = 5297x1/476kHz). To achieve the required cumulative mass erase time the Flash Controller's mass erase operation can be repeated until this time is met. (A worst case minimum of 19 cycles are required).
3. These values are hardwired into the Flash Controller's state machine (t<sub>FTG</sub> = 1/f<sub>FTG</sub>).

### JTAG Interface

PARAMETER		TEST CONDITIONS	V <sub>CC</sub>	MIN	NOM	MAX	UNIT
f <sub>TCK</sub>	TCK input frequency	see Note 1	2.2 V	0		5	MHz
			3 V	0		10	MHz
R <sub>Internal</sub>	Internal pull-up resistance on TMS, TCK, TDI/TCLK	see Note 2	2.2 V/ 3 V	25	60	90	kΩ

- NOTES: 1. f<sub>TCK</sub> may be restricted to meet the timing requirements of the module selected.
2. TMS, TDI/TCLK, and TCK pull-up resistors are implemented in all versions.

### JTAG Fuse (see Note 1)

PARAMETER		TEST CONDITIONS	V <sub>CC</sub>	MIN	NOM	MAX	UNIT
V <sub>CC(FB)</sub>	Supply voltage during fuse-blow condition	T <sub>A</sub> = 25°C		2.5			V
V <sub>FB</sub>	Voltage level on TDI/TCLK for fuse-blow			6		7	V
I <sub>FB</sub>	Supply current into TDI/TCLK during fuse blow					100	mA
t <sub>FB</sub>	Time to blow fuse					1	ms

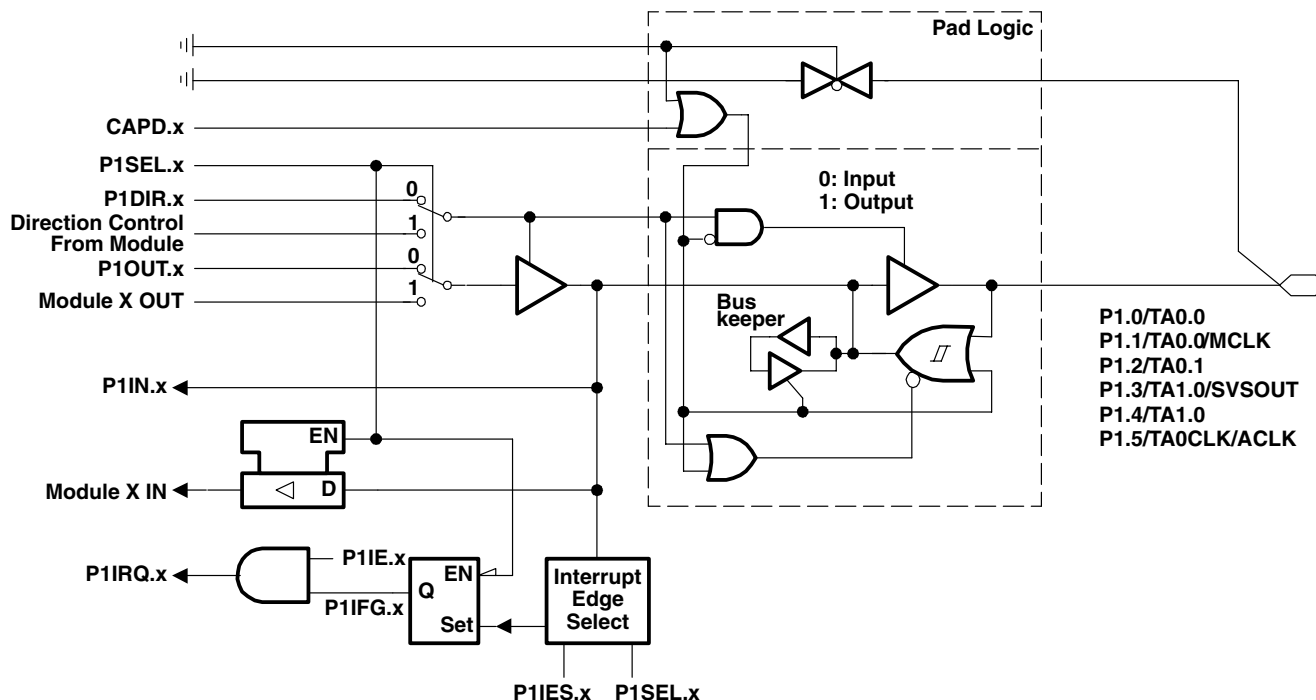

- NOTES: 1. Once the fuse is blown, no further access to the MSP430 JTAG/Test and emulation features is possible. The JTAG block is switched to bypass mode.

input/output schematic (continued)

port P6, P6.0, P6.1, P6.2, P6.4, P6.5, input/output with Schmitt-trigger

To/From Scan I/F  
P6SEL.x must be set if the corresponding pins are used by the Scan IF.

x: Bit Identifier = 0, 1, 2, 4, or 5

NOTE: Analog signals applied to digital gates can cause current flow from the positive to the negative terminal. The throughput current flows if the analog signal is in the range of transitions 0→1 or 1→0. The value of the throughput current depends on the driving capability of the gate. For MSP430, it is approximately 100 μA. Use P6SEL.x=1 to prevent throughput current. P6SEL.x should be set, if an analog signal is applied to the pin.

PnSEL.x	PnDIR.x	Dir. Control From Module	PnOUT.x	Module X OUT	PnIN.x	Module X IN

1	X	X	SVSIN

APPLICATION INFORMATION

JTAG pins TMS, TCK, TDI/TCLK, TDO/TDI, input/output with Schmitt-trigger or output

**APPLICATION INFORMATION**

**JTAG fuse check mode**

MSP430 devices that have the fuse on the TDI/TCLK terminal have a fuse check mode that tests the continuity of the fuse the first time the JTAG port is accessed after a power-on reset (POR). When activated, a fuse check current,  $I_{TF}$ , of 1.8 mA at 3 V can flow from the TDI/TCLK pin to ground if the fuse is not burned. Care must be taken to avoid accidentally activating the fuse check mode and increasing overall system power consumption.

Activation of the fuse check mode occurs with the first negative edge on the TMS pin after power up or if the TMS is being held low during power up. The second positive edge on the TMS pin deactivates the fuse check mode. After deactivation, the fuse check mode remains inactive until another POR occurs. After each POR the fuse check mode has the potential to be activated.

The fuse check current only flows when the fuse check mode is active and the TMS pin is in a low state (see Figure 21). Therefore, the additional current flow can be prevented by holding the TMS pin high (default condition).

The JTAG pins are terminated internally, and therefore do not require external termination.

**Figure 21. Fuse Check Mode Current, MSP430FW42x**

---

**Data Sheet Revision History**

Literature Number	Summary
SLAS383B	Updated functional block diagram (page 3) Clarified test conditions in recommended operating conditions table (page 18) Clarified test conditions in electrical characteristics table (page 19) Added $I_{lkg(Px.x)}$ for all ports in leakage current table (page 20) Clarified test conditions in DCO table (page 29) Changed $t_{CP_T}$ maximum value from 4 ms to 10 ms in Flash memory table (page 36)

NOTE: Page and figure numbers refer to the respective document revision.

<sup>(1)</sup> The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

<sup>(2)</sup> Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

<sup>(3)</sup> MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

**Important Information and Disclaimer:**The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

 B. This drawing is subject to change without notice.  
 C. Falls within JEDEC MS-026  
 D. May also be thermally enhanced plastic with leads connected to the die pads.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
