- **EPROM Version Available for Prototyping:**
  - PMS430E112: 4k Byte EPROM, 256 Byte RAM
- **Available in a 20-Pin Plastic Small-Outline Wide Body (SOWB) Package, 20-Pin Ceramic Dual-In-Line (CDIP) Package (EPROM Only)**
- **For Complete Module Descriptions, Refer to the *MSP430x1xx Family User's Guide*, Literature Number SLAU049**

## description

The Texas Instruments MSP430 family of ultralow power microcontrollers consist of several devices featuring different sets of peripherals targeted for various applications. The architecture, combined with five low power modes is optimized to achieve extended battery life in portable measurement applications. The device features a powerful 16-bit RISC CPU, 16-bit registers, and constant generators that attribute to maximum code efficiency. The digitally controlled oscillator (DCO) allows wake-up from low-power modes to active mode in less than 6 $\mu$ s.

The MSP430x11x series is an ultra low-power mixed signal microcontroller with a built in 16-bit timer and fourteen I/O pins.

Typical applications include sensor systems that capture analog signals, convert them to digital values, and then process the data and display them or transmit them to a host system. Stand alone RF sensor front-end is another area of application.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

## short-form description

### CPU

The MSP430 CPU has a 16-bit RISC architecture that is highly transparent to the application. All operations, other than program-flow instructions, are performed as register operations in conjunction with seven addressing modes for source operand and four addressing modes for destination operand.

The CPU is integrated with 16 registers that provide reduced instruction execution time. The register-to-register operation execution time is one cycle of the CPU clock.

Four of the registers, R0 to R3, are dedicated as program counter, stack pointer, status register, and constant generator respectively. The remaining registers are general-purpose registers.

Peripherals are connected to the CPU using data, address, and control buses, and can be handled with all instructions.

### instruction set

The instruction set consists of 51 instructions with three formats and seven address modes. Each instruction can operate on word and byte data. Table 1 shows examples of the three types of instruction formats; the address modes are listed in Table 2.

Program Counter	PC/R0
Stack Pointer	SP/R1
Status Register	SR/CG1/R2
Constant Generator	CG2/R3
General-Purpose Register	R4
General-Purpose Register	R5
General-Purpose Register	R6
General-Purpose Register	R7
General-Purpose Register	R8
General-Purpose Register	R9
General-Purpose Register	R10
General-Purpose Register	R11
General-Purpose Register	R12
General-Purpose Register	R13
General-Purpose Register	R14
General-Purpose Register	R15

**Table 1. Instruction Word Formats**

Dual operands, source-destination	e.g. ADD R4,R5	R4 + R5 ----> R5
Single operands, destination only	e.g. CALL R8	PC ---->(TOS), R8----> PC
Relative jump, un/conditional	e.g. JNE	Jump-on-equal bit = 0

**Table 2. Address Mode Descriptions**

ADDRESS MODE	S	D	SYNTAX	EXAMPLE	OPERATION
Register	●	●	MOV Rs,Rd	MOV R10,R11	R10 ----> R11
Indexed	●	●	MOV X(Rn),Y(Rm)	MOV 2(R5),6(R6)	M(2+R5)----> M(6+R6)
Symbolic (PC relative)	●	●	MOV EDE,TONI		M(EDE) ----> M(TONI)
Absolute	●	●	MOV &MEM,&TCDAT		M(MEM) ----> M(TCDAT)
Indirect	●		MOV @Rn,Y(Rm)	MOV @R10,Tab(R6)	M(R10) ----> M(Tab+R6)
Indirect autoincrement	●		MOV @Rn+,Rm	MOV @R10+,R11	M(R10) ----> R11 R10 + 2----> R10
Immediate	●		MOV #X,TONI	MOV #45,TONI	#45 ----> M(TONI)

NOTE: S = source D = destination

## operating modes

The MSP430 has one active mode and five software selectable low-power modes of operation. An interrupt event can wake up the device from any of the five low-power modes, service the request and restore back to the low-power mode on return from the interrupt program.

The following six operating modes can be configured by software:

- Active mode AM;
  - All clocks are active
- Low-power mode 0 (LPM0);
  - CPU is disabled  
ACLK and SMCLK remain active. MCLK is disabled
- Low-power mode 1 (LPM1);
  - CPU is disabled  
ACLK and SMCLK remain active. MCLK is disabled  
DCO's dc-generator is disabled if DCO not used in active mode
- Low-power mode 2 (LPM2);
  - CPU is disabled  
MCLK and SMCLK are disabled  
DCO's dc-generator remains enabled  
ACLK remains active
- Low-power mode 3 (LPM3);
  - CPU is disabled  
MCLK and SMCLK are disabled  
DCO's dc-generator is disabled  
ACLK remains active
- Low-power mode 4 (LPM4);
  - CPU is disabled  
ACLK is disabled  
MCLK and SMCLK are disabled  
DCO's dc-generator is disabled  
Crystal oscillator is stopped

SLAS196D– DECEMBER 1998 – REVISED SEPTEMBER 2004

## interrupt vector addresses

The interrupt vectors and the power-up starting address are located in the ROM with an address range of 0FFFFh-0FFE0h. The vector contains the 16-bit address of the appropriate interrupt handler instruction sequence.

INTERRUPT SOURCE	INTERRUPT FLAG	SYSTEM INTERRUPT	WORD ADDRESS	PRIORITY
Power-up, external reset, watchdog	WDTIFG (see Note1)	Reset	0FFFEh	15, highest
NMI, oscillator fault	NMIIFG, OFIFG (see Note 1)	(non)-maskable, (non)-maskable	0FFFCh	14
			0FFFAh	13
			0FFF8h	12
			0FFF6h	11
Watchdog Timer	WDTIFG	maskable	0FFF4h	10
Timer_A3	TACCR0 CCIFG (see Note 2)	maskable	0FFF2h	9
Timer_A3	TACCR1 and TACCR2 CCIFGs, TAIFG (see Notes 1 and 2)	maskable	0FFF0h	8
			0FEEh	7
			0FEECh	6
			0FEEAh	5
			0FEE8h	4
I/O Port P2 (eight flags – see Note 3)	P2IFG.0 to P2IFG.7 (see Notes 1 and 2)	maskable	0FEE6h	3
I/O Port P1 (eight flags)	P1IFG.0 to P1IFG.7 (see Notes 1 and 2)	maskable	0FEE4h	2
			0FEE2h	1
			0FEE0h	0, lowest

- NOTES: 1. Multiple source flags  
 2. Interrupt flags are located in the module  
 3. There are eight Port P2 interrupt flags, but only six Port P2 I/O pins (P2.0–5) are implemented on the '11x devices.

### special function registers

Most interrupt and module enable bits are collected into the lowest address space. Special function register bits that are not allocated to a functional purpose are not physically present in the device. Simple software access is provided with this arrangement.

#### interrupt enable 1

**WDTIE:** Watchdog Timer interrupt enable. Inactive if watchdog mode is selected. Active if Watchdog Timer is configured in interval timer mode.

**OFIE:** Oscillator fault enable

**NMIIE:** (Non)maskable interrupt enable

#### interrupt flag register 1

**WDTIFG:** Set on Watchdog Timer overflow (in watchdog mode) or security key violation. Reset on  $V_{CC}$  power-up or a reset condition at  $\overline{RST}/NMI$  pin in reset mode.

**OFIFG:** Flag set on oscillator fault

**NMIIFG:** Set via  $\overline{RST}/NMI$ -pin

- Legend**
- rw:** Bit can be read and written.
  - rw-0,1:** Bit can be read and written. It is Reset or Set by PUC
  - rw-(0,1):** Bit can be read and written. It is Reset or Set by POR
- SFR bit is not present in device.

# MSP430x11x MIXED SIGNAL MICROCONTROLLERS

SLAS196D– DECEMBER 1998 – REVISED SEPTEMBER 2004

## memory organization

## peripherals

Peripherals are connected to the CPU through data, address, and control busses and can be handled using all instructions. For complete module descriptions, refer to the MSP430x1xx Family User's Guide, literature number SLAU049.

## oscillator and system clock

The clock system is supported by the basic clock module that includes support for a 32768-Hz watch crystal oscillator, an internal digitally-controlled oscillator (DCO) and a high frequency crystal oscillator. The basic clock module is designed to meet the requirements of both low system cost and low-power consumption. The internal DCO provides a fast turn-on clock source and stabilizes in less than 6  $\mu$ s. The basic clock module provides the following clock signals:

- Auxiliary clock (ACLK), sourced from a 32768-Hz watch crystal or a high frequency crystal.
- Main clock (MCLK), the system clock used by the CPU.
- Sub-Main clock (SMCLK), the sub-system clock used by the peripheral modules.

## digital I/O

There are two 8-bit I/O ports implemented—ports P1 and P2 (only six P2 I/O signals are available on external pins):

- All individual I/O bits are independently programmable.
- Any combination of input, output, and interrupt conditions is possible.
- Edge-selectable interrupt input capability for all the eight bits of port P1 and six bits of port P2.
- Read/write access to port-control registers is supported by all instructions.

### NOTE:

Six bits of Port P2, P2.0 to P2.5, are available on external pins – but all control and data bits for Port P2 are implemented.

## watchdog timer

The primary function of the watchdog timer (WDT) module is to perform a controlled system restart after a software problem occurs. If the selected time interval expires, a system reset is generated. If the watchdog function is not needed in an application, the module can be configured as an interval timer and can generate interrupts at selected time intervals.

## timer\_A3

Timer\_A3 is a 16-bit timer/counter with three capture/compare registers. Timer\_A3 can support multiple capture/compares, PWM outputs, and interval timing. Timer\_A3 also has extensive interrupt capabilities. Interrupts may be generated from the counter on overflow conditions and from each of the capture/compare registers.

PARAMETER		TEST CONDITIONS	VCC	MIN	NOM	MAX	UNIT
t <sub>(int)</sub>	External Interrupt timing	Port P1, P2: P1.x to P2.x, External trigger signal for the interrupt flag, (see Note 1)	3 V/ 5 V	1.5			cycle
			3 V	540			ns
			5 V	270			
t <sub>(cap)</sub>	Timer_A, capture timing	TA0, TA1, TA2. (see Note 2)	3 V/ 5 V	1.5			cycle
			3 V	540			ns
			5 V	270			

- NOTES: 1. The external signal sets the interrupt flag every time the minimum t<sub>int</sub> cycle and time parameters are met. It may be set even with trigger signals shorter than t<sub>int</sub>. Both the cycle and timing specifications must be met to ensure the flag is set.
2. The external capture signal triggers the capture event every time when the minimum t<sub>cap</sub> cycles and time parameters are met. A capture may be triggered with capture signals even shorter than t<sub>cap</sub>. Both the cycle and timing specifications must be met to ensure a correct capture of the 16-bit timer value and to ensure the flag is set.

## internal signals TAx, SMCLK at Timer\_A

PARAMETER		TEST CONDITIONS	VCC	MIN	NOM	MAX	UNIT
f <sub>(IN)</sub>	Input frequency	Internal TA0, TA1, TA2, t <sub>H</sub> = t <sub>L</sub>	3 V	dc		10	MHz
			5 V	dc		15	
f <sub>(TAint)</sub>	Timer_A clock frequency	Internally, SMCLK signal applied	3 V/5 V	dc		f <sub>System</sub>	

## leakage current (see Note 1)

PARAMETER		TEST CONDITIONS	MIN	NOM	MAX	UNIT	
I <sub>lkg</sub> (P <sub>x.x</sub> )	High-impedance leakage current	Port P1: P1.x, 0 ≤ x ≤ 7 (see Note 2)	V <sub>CC</sub> = 3 V/5 V,			±50	nA
		Port P2: P2.x, 0 ≤ x ≤ 5 (see Note 2)	V <sub>CC</sub> = 3 V/5 V,			±50	

- NOTES: 1. The leakage current is measured with V<sub>SS</sub> or V<sub>CC</sub> applied to the corresponding pin(s), unless otherwise noted.
2. The leakage of the digital port pins is measured individually. The port pin must be selected for input and there must be no optional pullup or pulldown resistor.

**electrical characteristics over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted)**

**outputs P2x, TAx**

PARAMETER		TEST CONDITIONS		VCC	MIN	NOM	MAX	UNIT	
f(P20)	Output frequency	P2.0/ACLK,	C <sub>L</sub> = 20 pF	3 V/5 V			1.1	MHz	
f(TAx)		TA0, TA1, TA2,	C <sub>L</sub> = 20 pF	3 V/5 V	dc		f <sub>System</sub>		
t(Xdc)	Duty cycle of O/P frequency	P2.0/ACLK, C <sub>L</sub> = 20 pF		3 V/ 5 V		40%	60%		
					f <sub>P20</sub> = 1.1 MHz		35%		65%
					f <sub>P20</sub> = f <sub>XTCLK</sub> /n		50%		
t(TAdc)		TA0, TA1, TA2, Duty cycle = 50%	C <sub>L</sub> = 20 pF,	3 V/ 5 V		0	±50	ns	

**outputs Port 1 to P2; P1.0 to P1.7, P2.0 to P2.5**

PARAMETER		TEST CONDITIONS		MIN	NOM	MAX	UNIT
V <sub>OH</sub>	High-level output voltage	I <sub>(OH)</sub> = - 1.5 mA,	V <sub>CC</sub> = 3 V/5 V, See Note 1	V <sub>CC</sub> -0.4		V <sub>CC</sub>	V
		I <sub>(OH)</sub> = - 4.5 mA,	V <sub>CC</sub> = 3 V/5 V, See Note 2	V <sub>CC</sub> -0.6		V <sub>CC</sub>	
V <sub>OL</sub>	Low-level output voltage	I <sub>(OL)</sub> = 1.5 mA,	V <sub>CC</sub> = 3 V/5 V, See Note 1	V <sub>SS</sub>		V <sub>SS</sub> +0.4	V
		I <sub>(OL)</sub> = 4.5 mA,	V <sub>CC</sub> = 3 V/5 V, See Note 2	V <sub>SS</sub>		V <sub>SS</sub> +0.6	

- NOTES: 1. The maximum total current, I<sub>OH</sub> and I<sub>OL</sub>, or all outputs combined, should not exceed ±12 mA to hold the maximum voltage drop specified.  
2. The maximum total current, I<sub>OH</sub> and I<sub>OL</sub>, or all outputs combined, should not exceed ±36 mA to hold the maximum voltage drop specified.

**optional resistors, individually programmable with ROM code (see Note 1)**

PARAMETER		TEST CONDITIONS	MIN	NOM	MAX	UNIT
R <sub>(opt1)</sub>	Resistors, individually programmable with ROM code, all port pins, values applicable for pulldown and pullup	V <sub>CC</sub> = 3 V/5 V	2.1	4.1	6.2	kΩ
R <sub>(opt2)</sub>		V <sub>CC</sub> = 3 V/5 V	3.1	6.2	9.3	kΩ
R <sub>(opt3)</sub>		V <sub>CC</sub> = 3 V/5 V	6	12	18	kΩ
R <sub>(opt4)</sub>		V <sub>CC</sub> = 3 V/5 V	10	19	29	kΩ
R <sub>(opt5)</sub>		V <sub>CC</sub> = 3 V/5 V	19	37	56	kΩ
R <sub>(opt6)</sub>		V <sub>CC</sub> = 3 V/5 V	38	75	113	kΩ
R <sub>(opt7)</sub>		V <sub>CC</sub> = 3 V/5 V	56	112	168	kΩ
R <sub>(opt8)</sub>		V <sub>CC</sub> = 3 V/5 V	94	187	281	kΩ
R <sub>(opt9)</sub>		V <sub>CC</sub> = 3 V/5 V	131	261	392	kΩ
R <sub>(opt10)</sub>		V <sub>CC</sub> = 3 V/5 V	167	337	506	kΩ

NOTE 1: Optional resistors R<sub>optx</sub> for pulldown or pullup are not programmed in standard OTP or EPROM devices MSP430P112 or PMS430E112.

Figure 5. DCO Characteristics

**electrical characteristics over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted) (continued)**

**main DCO characteristics**

- Individual devices have a minimum and maximum operation frequency. The specified parameters for  $f_{(DCOx0)}$  to  $f_{(DCOx7)}$  are valid for all devices.
- All ranges selected by Rsel(n) overlap with Rsel(n+1): Rsel0 overlaps Rsel1, ... Rsel6 overlaps Rsel7.
- DCO control bits DCO0, DCO1, and DCO2 have a step size as defined by parameter  $S_{DCO}$ .
- Modulation control bits MOD0 to MOD4 select how often  $f_{(DCO+1)}$  is used within the period of 32 DCOCLK cycles. The frequency  $f_{(DCO)}$  is used for the remaining cycles. The frequency is an average equal to:

$$f_{average} = \frac{32 \times f_{(DCO)} \times f_{(DCO+1)}}{MOD \times f_{(DCO)} + (32 - MOD) \times f_{(DCO+1)}}$$

**crystal oscillator, XIN, XOUT**

PARAMETER		TEST CONDITIONS	MIN	NOM	MAX	UNIT
C <sub>XIN</sub>	Capacitance at input	V <sub>CC</sub> = 3 V/5 V		12		pF
C <sub>XOUT</sub>	Capacitance at output	V <sub>CC</sub> = 3 V/5 V		12		pF
V <sub>IL</sub>	Input levels at XIN	V <sub>CC</sub> = 3 V/5 V (see Note 2)	V <sub>SS</sub>		0.2×V <sub>CC</sub>	V
V <sub>IH</sub>			0.8×V <sub>CC</sub>		V <sub>CC</sub>	

- NOTES: 1. The oscillator needs capacitors at both terminals, with values specified by the crystal manufacturer.  
2. Applies only when using an external logic-level clock source. Not applicable when using a crystal or resonator.

# MSP430x11x MIXED SIGNAL MICROCONTROLLERS

electrical characteristics over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted) (continued)

## EPROM Memory, P- and E- versions only (see Note 1)

PARAMETER		TEST CONDITIONS	V <sub>CC</sub>	MIN	NOM	MAX	UNIT
V <sub>(PP)</sub>	Programming voltage, applied to TEST/VPP			12	12.5	13	V
I <sub>(PP)</sub>	Current from programming voltage source					70	mA
t <sub>(pps)</sub>	Programming time, single pulse			5			ms
t <sub>(ppf)</sub>	Programming time, fast algorithm				100		μs
P <sub>(n)</sub>	Number of pulses for successful programming			4		100	Pulse
t <sub>(erase)</sub>	Erase time: Wave length 2537 Å at 15 Ws/cm <sup>2</sup> (UV lamp of 12 mW/ cm <sup>2</sup> )			30			min
	Write/erase cycles			1000			cycles
	Data retention T <sub>j</sub> < 55°C			10			Year

NOTES: 1. Refer to the Recommended Operating Conditions for the correct V<sub>CC</sub> during programming.

## JTAG Interface

PARAMETER		TEST CONDITIONS	V <sub>CC</sub>	MIN	NOM	MAX	UNIT
f <sub>TCK</sub>	TCK input frequency	see Note 1	3 V	DC		5	MHz
			5 V	DC		10	

NOTES: 1. f<sub>TCK</sub> may be restricted to meet the timing requirements of the module selected.

## JTAG Fuse (see Note 1)

PARAMETER		TEST CONDITIONS	V <sub>CC</sub>	MIN	NOM	MAX	UNIT
V <sub>FB</sub>	Fuse blow voltage, C versions (see Note 2)		3 V/ 5 V	5.5		6	V
	Fuse blow voltage, E/P versions (see Note 2)		3 V/ 5 V	11		13	
I <sub>FB</sub>	Supply current into TEST/VPP during fuse blow					100	mA
t <sub>FB</sub>	Time to blow fuse					1	ms

NOTES: 1. Once the fuse is blown, no further access to the MSP430 JTAG/Test and emulation features is possible. The JTAG block is switched to bypass mode.  
2. The fuse blow voltage is applied to the TEST/VPP pin.

2. Fuses for optional pullup and pulldown resistors can only be programmed at the factory.

APPLICATION INFORMATION

input/output schematic (continued)

Port P2, un-bonded bits P2.6 and P2.7

NOTE: x = Bit identifier, 6 to 7 for Port P2 without external pins

P2Sel.x	P2DIR.x	Dir. Control from module	P2OUT.x	Module X OUT	P2IN.x	Module X IN	P2IE.x	P2IFG.x	P2IES.x
P2Sel.6	P2DIR.6	P2DIR.6	P2OUT.6	V <sub>SS</sub>	P2IN.6	unused	P2IE.6	P2IFG.6	P2IES.6
P2Sel.7	P2DIR.7	P2DIR.7	P2OUT.7	V <sub>SS</sub>	P2IN.7	unused	P2IE.7	P2IFG.7	P2IES.7

NOTE: A good use of the unbonded bits 6 and 7 of port P2 is to use the interrupt flags. The interrupt flags can not be influenced from any signal other than from software. They work then as soft interrupt.

## APPLICATION INFORMATION

### JTAG fuse check mode

MSP430 devices that have the fuse on the TEST terminal have a fuse check mode that tests the continuity of the fuse the first time the JTAG port is accessed after a power-on reset (POR). When activated, a fuse check current,  $I_{TF}$ , of 1 mA at 3 V, 2.5 mA at 5 V can flow from the TEST pin to ground if the fuse is not burned. Care must be taken to avoid accidentally activating the fuse check mode and increasing overall system power consumption.

When the TEST pin is taken back low after a test or programming session, the fuse check mode and sense currents are terminated.

Activation of the fuse check mode occurs with the first negative edge on the TMS pin after power up or if TMS is being held low during power up. The second positive edge on the TMS pin deactivates the fuse check mode. After deactivation, the fuse check mode remains inactive until another POR occurs. After each POR the fuse check mode has the potential to be activated.

The fuse check current will only flow when the fuse check mode is active and the TMS pin is in a low state (see Figure 6). Therefore, the additional current flow can be prevented by holding the TMS pin high (default condition).

- NOTES: A. All linear dimensions are in inches (millimeters).  
 B. This drawing is subject to change without notice.  
 C. Body dimensions do not include mold flash or protrusion not to exceed 0.006 (0,15).  
 D. Falls within JEDEC MS-013

# MSP430x11x MIXED SIGNAL MICROCONTROLLERS

SLAS196D- DECEMBER 1998 - REVISED SEPTEMBER 2004

## MSP430C111IDW, MSP430C112IDW, MSP430P112IDW pin out

## PMS430E112 pin out

**PACKAGING INFORMATION**

Orderable Device	Status <sup>(1)</sup>	Package Type	Package Drawing	Pins	Package Qty	Eco Plan <sup>(2)</sup>	Lead/Ball Finish	MSL Peak Temp <sup>(3)</sup>
MSP-EVK430A110	OBSOLETE			0		TBD	Call TI	Call TI
MSP430P112IDW	ACTIVE	SOIC	DW	20	25	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-1-260C-UNLIM
PMS430E112JL	ACTIVE	CDIP	JL	20	1	TBD	Call TI	Level-1-220C-UNLIM

<sup>(1)</sup> The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

<sup>(2)</sup> Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

<sup>(3)</sup> MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

**Important Information and Disclaimer:**The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

DW (R-PDSO-G20)

PLASTIC SMALL-OUTLINE PACKAGE

- NOTES:
- A. All linear dimensions are in inches (millimeters).
  - B. This drawing is subject to change without notice.
  - C. Body dimensions do not include mold flash or protrusion not to exceed 0.006 (0,15).
  - D. Falls within JEDEC MS-013 variation AC.

JL (R-GDIP-T20)

CERAMIC DUAL-IN-LINE PACKAGE

- NOTES:
- All linear dimensions are in inches (millimeters).
  - This drawing is subject to change without notice.
  - This package can be hermetically sealed with a ceramic lid using glass frit.
  - Index point is provided on cap for terminal identification only on press ceramic glass frit seal only
  - Falls within MIL-STD-1835 GDIP1-T20

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
