FAIRCHILD

SEMICONDUCTOR®

SG6518
LCD Power Supply Supervisor

Features

- Two Adjustable Voltage Sense Input Pins: VSV1 and VSV2

- Over-voltage Protection (OVP) for 5V, 12V, and two outputs: V1, V2

- Over-current Protection (OCP) for 5V, 12V, and two outputs: V1, V2

- Adjustable Voltage Control Sense Input of V1 and V2 (ADJ-V1, ADJ-V2)

- Open-drain Output for FPO Pin

- 13ms PSON Control Delay

- No Lockup During the Fast AC Power-on/off

- Wide Supply Voltage Range: 4V to 15V

- Programmable Over-temperature Protection (OTP)

Applications

- LCD Power Supply

Description

SG6518 provides the over-voltage protection (OVP) for 5V, 12V, and outputs V1 and V2 as well as over-current protection (OVP) for 5V, 12V, and outputs V1 and V2. When the voltage of OTP pin decreases to 1.2V, the over-temperature protection (OTP) function is enabled. FPO is set to HIGH to turn off the PWM control IC. The voltage difference across the external current shunt is used for OCP functions. An external resistor can be used to adjust protection threshold.

The power supply is turned on after a 13ms delay time when the PSON signal is set from LOW to HIGH. To turn off the power supply, PSON signal is set from HIGH to LOW with the delay time 13ms.

Ordering Information

Part Number	Operating Temperature Range	Package	Packing Method
SG6518DZ	-40°C to +85°C	16-DIP	Rail
SG6518SZ	-40°C to +85°C	16-SOP	Reel & Tape

All packages are lead free per JEDEC: J-STD-020B standard.
Application Diagram

Figure 1.   Typical Application

Note:
1. $R_1 = 200\Omega$ and $R_2 = 200\Omega$ are suggested.
2. C_1 and C_2 are suggested to be 100nF to 2.2uF.

Internal Block Diagram

Figure 2.   Function Block Diagram

Note:
3.   The VSV1 pin is the power pin for the two OCP comparators.

Pin Configuration

Figure 3.   Pin Configuration

Pin Definitions

Pin #	Name	Description
1	GND	Ground.
2	FPO	Fault protection output. Output signal to control the primary PWM IC through an opto-coupler. When FPO is LOW, the PWM IC is enabled.
3	PSON	Remote on/off logic input from CPU or main-board. The power supply is turned on/off after 13ms delay.
4	VSV1	V1 voltage sense input.[4]
5	ADJ-V1	V1 over-voltage control sense input.
6	RI	Reference setting. One external resistor, R_i, connected between the RI and GND pins determines a reference current, $I_{REF} = 1.5V/R_i$, for OCP programming.
7	ADJ-V2	V2 over-voltage control sense input.
8	VSV2	V2 voltage sense input.
9	ISV2	V2 over-current protection sense input. In typical applications, this pin is connected to the positive end of a current shunt through one resistor. When the voltage on ISV2 is higher than that of VSV2 by 6mV, OCP is enabled.
10	ISV1	VSV1 over-current protection sense input. In typical applications, this pin is connected to the positive end of a current shunt through one resistor. When the voltage on ISV1 is higher than that of VSV1 by 6mV, OCP is enabled.
11	IS12	12V over-current protection sense input. In typical applications, this pin is connected to the positive end of a current shunt through one resistor. When the voltage on IS12 is higher than that of VS12 by 6mV, OCP is enabled.
12	VS12	12V over-voltage control sense input.
13	IS5	5V over-current protection sense input. In typical applications, this pin is connected to the positive end of a current shunt through one resistor. When the voltage on IS5 is higher than that of VS5 by 6mV, OCP is enabled.
14	VS5	5V over-voltage control sense input.
15	VDD	Supply voltage, 4V ~ 15V. For general applications, it is connected to 5V-standby for supply voltage.
16	OTP	For over-temperature protection. An external NTC thermistor is connected from this pin to ground. The impedance of the NTC decreases at high temperatures. Once the voltage of the OTP pin drops below a fixed limit of 1.2V, FPO is open-drain output.

Note:
4.   The VSV1 pin is the power pin for the two OCP comparators; it must be higher than VSV2.

Absolute Maximum Ratings

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only. All voltage values, except differential voltages, are given with respect to GND pin. Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device.

Symbol	Parameter		Min.	Max.	Unit
V_{DD}	DC Supply Voltage			16	V
V_I	Input Voltage	ISV1, ISV2, VSV1, VSV2	-0.3	30.0	V
		PSON, IS12,VS12	-0.3	15.0	
		ADJ-V1, ADJ-V2, IS5, VS5, OTP, RI	-0.3	7.0	
V_{OUT}	Output Voltage	FPO	-0.3	15.0	V
P_D	Power Dissipation			400	mW
T_J	Operating Free Junction Temperature Range		-40	+125	°C
T_{STG}	Storage Temperature Range		-55	+150	°C
T_L	Lead Temperature (Wave Soldering, 10 Seconds)			+260	°C
ESD	Electrostatic Discharge Capability, Human Body Model			2.5	kV
	Electrostatic Discharge Capability, Machine Model			200	V

Recommended Operating Conditions

The Recommended Operating Conditions table defines the conditions for actual device operation. Recommended operating conditions are specified to ensure optimal performance to the datasheet specifications. Fairchild does not recommend exceeding them or designing to Absolute Maximum Ratings.

Symbol	Parameter	Min.	Max.	Unit
V_{DD}	DC Supply Voltage	4	15	V
T_A	Operating Ambient Temperature Range	-40	+85	°C

Electrical Characteristics

Unless otherwise noted, operating specifications are V_{DD} = 5V, T_A=+25°C

Applications Information (OCP)

The SG6518 provides over-current protection for the 5V, 12V, and two outputs: V1, V2. When an OCP condition occurs at any of the voltage rails, FPO opens. The internal OCP comparators have a very small offset voltage (±6mV). The sink currents of IS5, IS12, ISV1, and ISV2 are eight times the current at the RI pin. The current at the RI pin is V_{RI}/R_i. Here is an example demonstrating how to set the over-current protection.

If $I_1 \cdot R1 > (I_{RI} \cdot 8) \cdot R2$, OCP is active.

To select R2 Resistor:

If R1 = 5mΩ, R_i = 51k, OCP Protection Level is 5A, then

$R2 = (I_1 \cdot R1)/(I_{RI} \cdot 8)$

$= (5A \cdot 5mΩ) / \{(1.5V / 51K) \cdot 8\}$
$= 106Ω$
