XTR110

SBOS141B – JANUARY 1984 – REVISED APRIL 2007

PRECISION VOLTAGE-TO-CURRENT CONVERTER/TRANSMITTER

FEATURES

- **4mA TO 20mA TRANSMITTER**
- **SELECTABLE INPUT/OUTPUT RANGES:**
  0V to +5V, 0V to +10V Inputs
  0mA to 20mA, 5mA to 25mA Outputs
  Other Ranges
- **0.005% MAX NONLINEARITY, 14 BIT**
- **PRECISION +10V REFERENCE OUTPUT**
- **SINGLE SUPPLY OPERATION**
- **WIDE SUPPLY RANGE: 13.5V to 40V**

APPLICATIONS

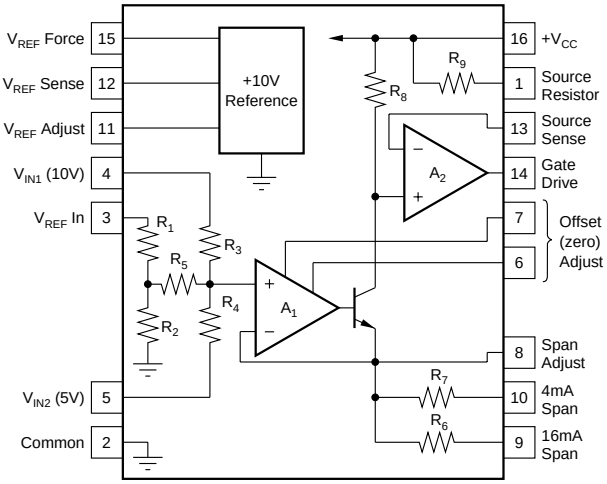
- **INDUSTRIAL PROCESS CONTROL**
- **PRESSURE/TEMPERATURE TRANSMITTERS**
- **CURRENT-MODE BRIDGE EXCITATION**
- **GROUNDED TRANSDUCER CIRCUITS**
- **CURRENT SOURCE REFERENCE FOR DATA ACQUISITION**
- **PROGRAMMABLE CURRENT SOURCE FOR TEST EQUIPMENT**
- **POWER PLANT/ENERGY SYSTEM MONITORING**

DESCRIPTION

The XTR110 is a precision voltage-to-current converter designed for analog signal transmission. It accepts inputs of 0 to 5V or 0 to 10V and can be connected for outputs of 4 to 20mA, 0 to 20mA, 5 to 25mA and many other commonly used ranges.

A precision on-chip metal film resistor network provides input scaling and current offsetting. An internal 10V voltage reference can be used to drive external circuitry.

The XTR110 is available in 16-pin plastic DIP, ceramic DIP and SOL-16 surface-mount packages. Commercial and industrial temperature range models are available.



ABSOLUTE MAXIMUM RATINGS(1)

Power Supply, $+V_{CC}$ 40V
Input Voltage, V_{IN1}, V_{IN2}, $V_{REF\ IN}$ ..... $+V_{CC}$
See text regarding safe negative input voltage range.
Storage Temperature Range: A, B .....–55°C to +125°C
K, U .....–40°C to +85°C
Output Short-Circuit Duration, Gate Drive
and V_{REF} Force ..... Continuous to common and $+V_{CC}$
Output Current Using Internal 50Ω Resistor 40mA

NOTE: (1) Stresses above these ratings may cause permanent damage. Exposure to absolute maximum conditions for extended periods may degrade device reliability.

ELECTROSTATIC DISCHARGE SENSITIVITY

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

PACKAGE/ORDERING INFORMATION(1)

PRODUCT	PACKAGE-LEAD	PACKAGE DESIGNATOR	TEMPERATURE RANGE
XTR110AG	DIP-16 Ceramic	JD	–40°C to +85°C
XTR110BG	DIP-16 Ceramic	JD	–40°C to +85°C
XTR110KP	DIP-16 Plastic	N	0°C to +70°C
XTR110KU	SOL-16 Surface-Mount	DW	0°C to +70°C

NOTES: (1) For the most current package and ordering information, see the Package Option Addendum at the end of this document, or see the TI website at www.ti.com.

APPLICATIONS INFORMATION

Figure 1 shows the basic connections required for 0V to 10V input and 4 to 20mA output. Other input voltage and output current ranges require changes in connections of pins 3, 4, 5, 9 and 10 as shown in the table of Figure 1.

The complete transfer function of the XTR110 is:

$$I_O = \frac{10\left[\frac{(V_{REF\ IN})}{16} + \frac{(V_{IN1})}{4} + \frac{(V_{IN2})}{2}\right]}{R_{SPAN}} \qquad (1)$$

R_{SPAN} is the internal 50Ω resistor, R_9, when connected as shown in Figure 1. An external R_{SPAN} can be connected for different output current ranges as described later.

EXTERNAL TRANSISTOR

An external pass transistor, Q_{EXT}, is required as shown in Figure 1. This transistor conducts the output signal current. A P-channel MOSFET transistor is recommended. It must have a voltage rating equal or greater than the maximum power supply voltage. Various recommended types are shown in Table I.

MANUFACTURER	PART NO.	BV_{DSS}(1)	BV_{GS}(1)	PACKAGE

0-5	4-20	+10V Ref	Com	Input	Com	Open
0-5	5-25	+10V Ref	Com	Input	Com	Com

FIGURE 1. Basic Circuit Connection.

If the supply voltage, $+V_{CC}$, exceeds the gate-to-source breakdown voltage of Q_{EXT}, and the output connection (drain of Q_{EXT}) is broken, Q_{EXT} could fail. If the gate-to-source breakdown voltage is lower than $+V_{CC}$, Q_{EXT} can be protected with a 12V zener diode connected from gate to source.

Two PNP discrete transistors (Darlington-connected) can be used for Q_{EXT}—see Figure 2. Note that an additional capacitor is required for stability. Integrated Darlington transistors are not recommended because their internal base-emitter resistors cause excessive error.

TRANSISTOR DISSIPATION

Maximum power dissipation of Q_{EXT} depends on the power supply voltage and full-scale output current. Assuming that the load resistance is low, the power dissipated by Q_{EXT} is:

$$P_{MAX} = (+V_{CC})\ I_{FS} \qquad (2)$$

The transistor type and heat sinking must be chosen according to the maximum power dissipation to prevent overheating. See Table II for general recommendations.

PACKAGE TYPE	ALLOWABLE POWER DISSIPATION
TO-92	Lowest: Use minimum supply and at +25°C.
TO-237	Acceptable: Trade-off supply and temperature.
TO-39	Good: Adequate for majority of designs.
TO-220	Excellent: For prolonged maximum stress.
TO-3	Use if hermetic package is required.

TABLE II. External Transistor Package Type and Dissipation.

INPUT VOLTAGE RANGE

The internal op amp A_1 can be damaged if its non-inverting input (an internal node) is pulled more than 0.5V below common (0V). This could occur if input pins 3, 4 or 5 were driven with an op amp whose output could swing negative under abnormal conditions. The voltage at the input of A_1 is:

$$V_{A1} = \frac{(V_{REF\ IN})}{16} + \frac{(V_{IN1})}{4} + \frac{(V_{IN2})}{2} \qquad (3)$$

This voltage should not be allowed to go more negative than –0.5V. If necessary, a clamp diode can be connected from the negative-going input to common to clamp the input voltage.

COMMON (Ground)

Careful attention should be directed toward proper connection of the common (grounds). All commons should be joined at one point as close to pin 2 of the XTR110 as possible. The exception is the I_{OUT} return. It can be returned to any point where it will not modulate the common at pin 2.

VOLTAGE REFERENCE

The reference voltage is accurately regulated at pin 12 ($V_{REF\ SENSE}$). To preserve accuracy, any load including pin 3 should be connected to this point. The circuit in Figure 3 shows adjustment of the voltage reference.

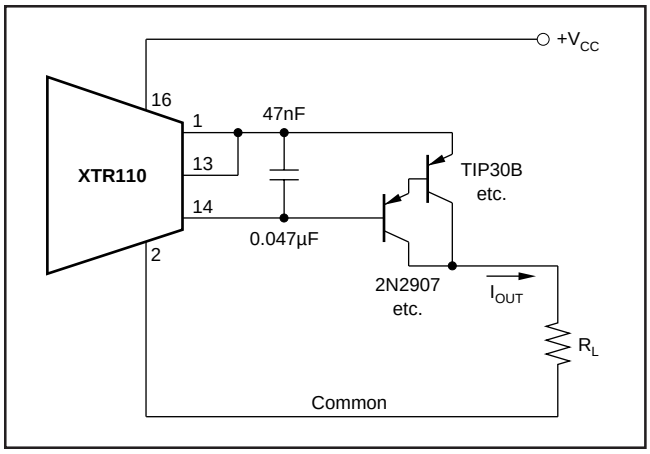

FIGURE 2. Q_{EXT} Using PNP Transistors.

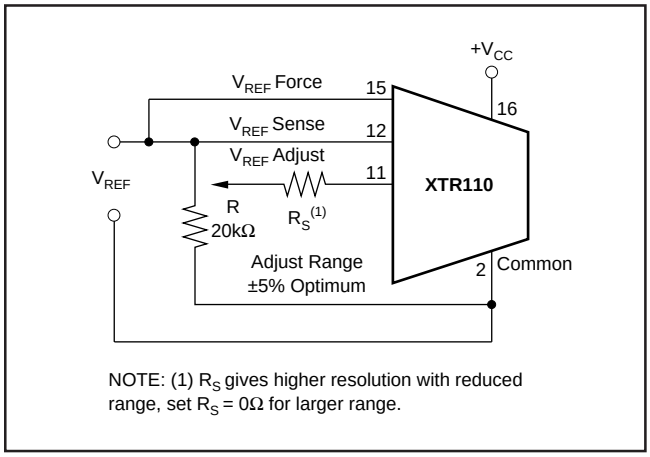

FIGURE 3. Optional Adjustment of Reference Voltage.

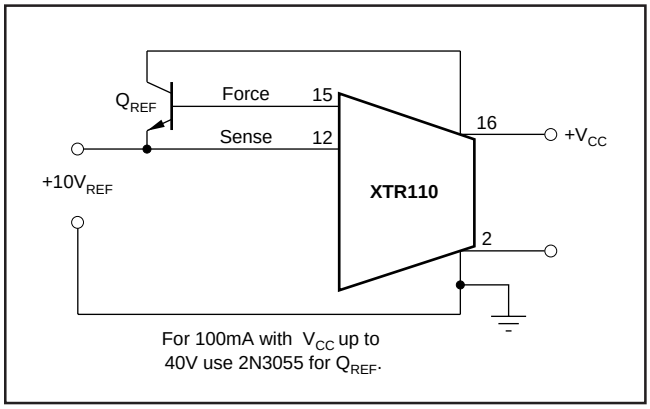

FIGURE 4. Increasing Reference Current Drive.

The current drive capability of the XTR110's internal reference is 10mA. This can be extended if desired by adding an external NPN transistor shown in Figure 4.

OFFSET (ZERO) ADJUSTMENT

The offset current can be adjusted by using the potentiometer, R_1, shown in Figure 5. Set the input voltage to zero and then adjust R_1 to give 4mA at the output. For spans starting

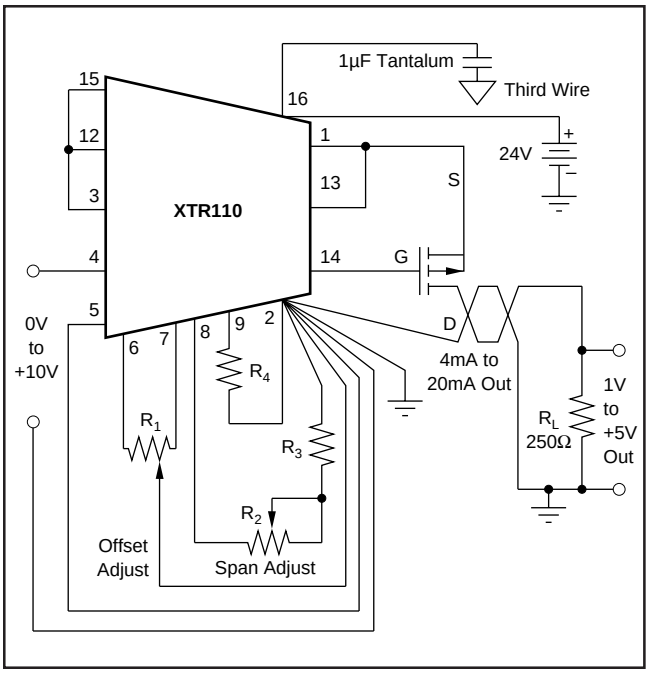

FIGURE 5. Offset and Span Adjustment Circuit for 0V to +10V Input, 4mA to 20mA Output.

at 0mA, the following special procedure is recommended: set the input to a small nonzero value and then adjust R_1 to the proper output current. When the input is zero the output will be zero. Figures 6 and 7 show graphically how offset is adjusted.

SPAN ADJUSTMENT

The span is adjusted at the full-scale output current using the potentiometer, R_2, shown in Figure 5. This adjustment is interactive with the offset adjustment, and a few iterations may be necessary. For the circuit shown, set the input voltage to +10V full scale and adjust R_2 to give 20mA full-scale output. Figures 6 and 7 show graphically how span is adjusted.

The values of R_2, R_3, and R_4 for adjusting the span are determined as follows: choose R_4 in series to slightly decrease the span; then choose R_2 and R_3 to increase the span to be adjustable about the center value.

LOW TEMPERATURE COEFFICIENT OPERATION

Although the precision resistors in the XTR110 track within 1ppm/°C, the output current depends upon the absolute temperature coefficient (TC) of any one of the resistors, R_6, R_7, R_8, and R_9. Since the absolute TC of the output current can have 20ppm/°C, maximum, the TC of the output current can have 20ppm/°C drift. For low TC operation, zero TC resistors can be substituted for either the span resistors (R_6 or R_7) or for the source resistor (R_9) but not both.

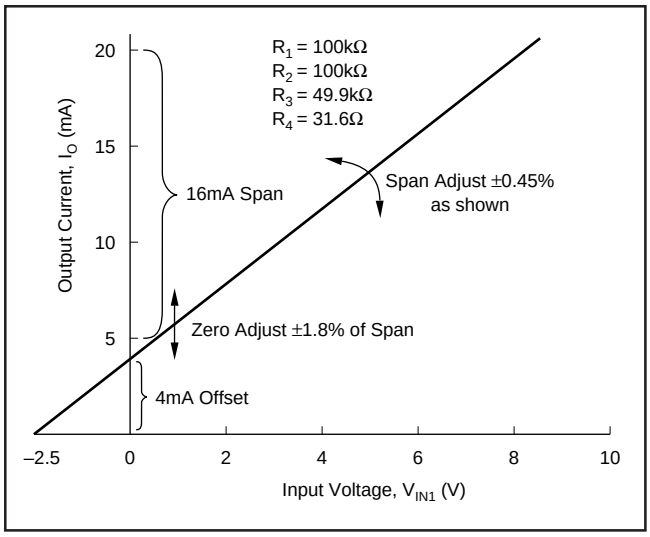

FIGURE 6. Zero and Span of 0V to +10V Input, 4mA to 20mA Output Configuration (see Figure 5).

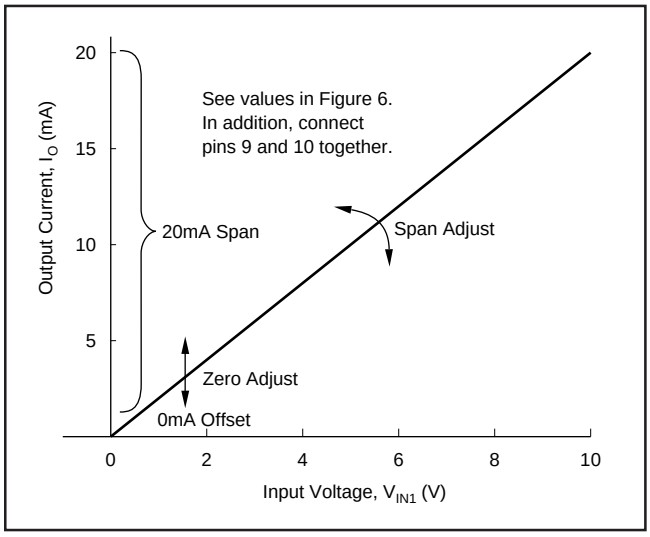

FIGURE 7. Zero and Span of 0V to +10V_{IN}, 0mA to 20mA Output Configuration (see Figure 5).

EXTENDED SPAN

For spans beyond 40mA, the internal 50Ω resistor (R_9) may be replaced by an external resistor connected between pins 13 and 16.

Its value can be calculated as follows:

$$R_{EXT} = R_9 \ (Span_{OLD}/Span_{NEW})$$

Since the internal thin-film resistors have a 20% absolute value tolerance, measure R_9 before determining the final value of R_{EXT}. Self-heating of R_{EXT} can cause nonlinearity. Therefore, choose one with a low TC and adequate power rating. See Figure 10 for application.

TYPICAL APPLICATIONS

The XTR110 is ideal for a variety of applications requiring high noise immunity current-mode signal transmission. The precision +10V reference can be used to excite bridges and transducers. Selectable ranges make it very useful as a precision programmable current source. The compact design and low price of the XTR110 allow versatility with a minimum of external components and design engineering expense.

Figures 8 through 10 show typical applications of the XTR110.

[1] The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

[2] Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
TBD: The Pb-Free/Green conversion plan has not been defined.
Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.
Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.
Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
