

## MuxIt™ RECEIVER-DESERIALIZER

### FEATURES

- A Member of the MuxIt™ Serializer-Deserializer Building-Block Chip Family
- Supports Deserialization of One Serial Link Data Channel Input at Rates up to 200 Mbps
- PLL Lock/Valid Input Provided to Enable Parallel Data and Clock Outputs
- Cascadable With Additional SN65LVDS152 MuxIt Receiver-Deserializers for Wider Parallel Output Data Channel Widths
- LVDS Compatible Differential Inputs and Outputs Meet or Exceed the Requirements of ANSI TIA/EIA-644-A
- LVDS Input and Output ESD Protection Exceeds 12 kV HBM
- LVTTTL Compatible Inputs for Lock/Valid and Enables Are 5-V Tolerant
- Operates With 3.3-V Supply
- Packaged in 32-Pin DA Thin Shrink Small-Outline Package With 26-Mil Terminal Pitch

### DESCRIPTION

MuxIt is a family of general-purpose, multiple-chip building blocks for implementing parallel data serializers and deserializers. The system allows for wide parallel data to be transmitted through a reduced number of transmission lines over distances greater than can be achieved with a single-ended (e.g., LVTTTL or LVCMOS) data interface. The number of bits multiplexed per transmission line is user selectable, allowing for higher transmission efficiencies than with other existing fixed ratio solutions. MuxIt utilizes the LVDS (TIA/EIA-644-A) low voltage differential signaling technology for communications between the data source and data destination.

The MuxIt family initially includes three devices supporting simplex communications: the SN65LVDS150 phase locked loop frequency multiplier, the SN65LVDS151 serializer-transmitter, and the SN65LVDS152 receiver-deserializer.

The SN65LVDS152 consists of three LVDS differential transmission line receivers, an LVDS differential transmission line driver, a 10-bit serial-in/parallel-out shift register, plus associated input and output buffers. It receives serialized data over an LVDS transmission line link, deserializes (demultiplexes) it, and delivers it on parallel data outputs, DO-0 through DO-9. Data received over the link is clocked at a factor of M times the original parallel data frequency. The multiplexing ratio M, or number of bits per data clock cycle, is programmed with configuration pins (M1 → M5) on the companion SN65LVDS150 MuxIt programmable PLL frequency multiplier. Up to 10 bits of data may be deserialized and output by each SN65LVDS152. Two or more SN65LVDS152 units may be connected in series (cascaded) to accommodate wider parallel data paths for higher serialization values. The range of multiplexing ratio M supported by the SN65LVDS150 MuxIt programmable PLL frequency multiplier is between 4 and 40. [Table 1](#) shows some of the combinations of LCI and MCI supported by the SN65LVDS150 MuxIt programmable PLL frequency multiplier.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

MuxIt is a trademark of Texas Instruments.

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

### DESCRIPTION (CONTINUED)

Data is serially shifted into the SN65LVDS152 shift register on the falling edges of the M-clock input (MCI). The data is latched out in parallel from the SN65LVDS152 shift register on the second rising edge after the first falling edge of the M-clock following a rising edge of the link clock input (LCI). The SN65LVDS152 includes LVDS differential line receivers for both the serialized link data stream (DI) and link clock (LCI). High-speed signals from the SN65LVDS150 MuxIt programmable frequency multiplier (MCI), plus the input and output for cascaded data (DI, CO) are carried over differential connections to minimize skew and jitter. Examples of operating waveforms for values of  $M = 4$  and  $M = 10$  are provided in [Figure 1](#).

The enable input (EN) along with internal power-on reset (POR) controls the outputs. When  $V_{CC}$  is below 1.5 volts, or when EN is low, outputs are disabled. When  $V_{CC}$  is above 3 V and EN is high, outputs are enabled and operating to specifications.

Parallel data bits are output from DO-n outputs in an order dependent on the value of the multiplexing ratio (frequency multiplier value) M. For values of M from 4 through 10, the cascade output ( $CO_{\pm}$ ) is not used, and only the top M parallel outputs (DO-9 through DO-[10-M]) are used. The data bit output on DO-9 corresponds to the data bit input on DI-[M-1] of the SN65LVDS151 serializer. Likewise, the data bit output on DO-[10-M] will correspond to the data bit input on DI-0 of the SN65LVDS151 serializer.

For values of M greater than 10, the cascade output ( $CO_{\pm}$ ) is used to connect multiple SN65LVDS152 deserializers. In this case the higher-order unit(s) output 10 bits each of the highest numbered bits that are input into the SN65LVDS151 serializer(s). The lowest numbered input bits are output on the lowest-order SN65LVDS152 deserializer in descending order from output DO-9. The number of bits is equal to  $M \bmod(10)$ . [Table 2](#) reflects this information, where  $X = M \bmod(10)$

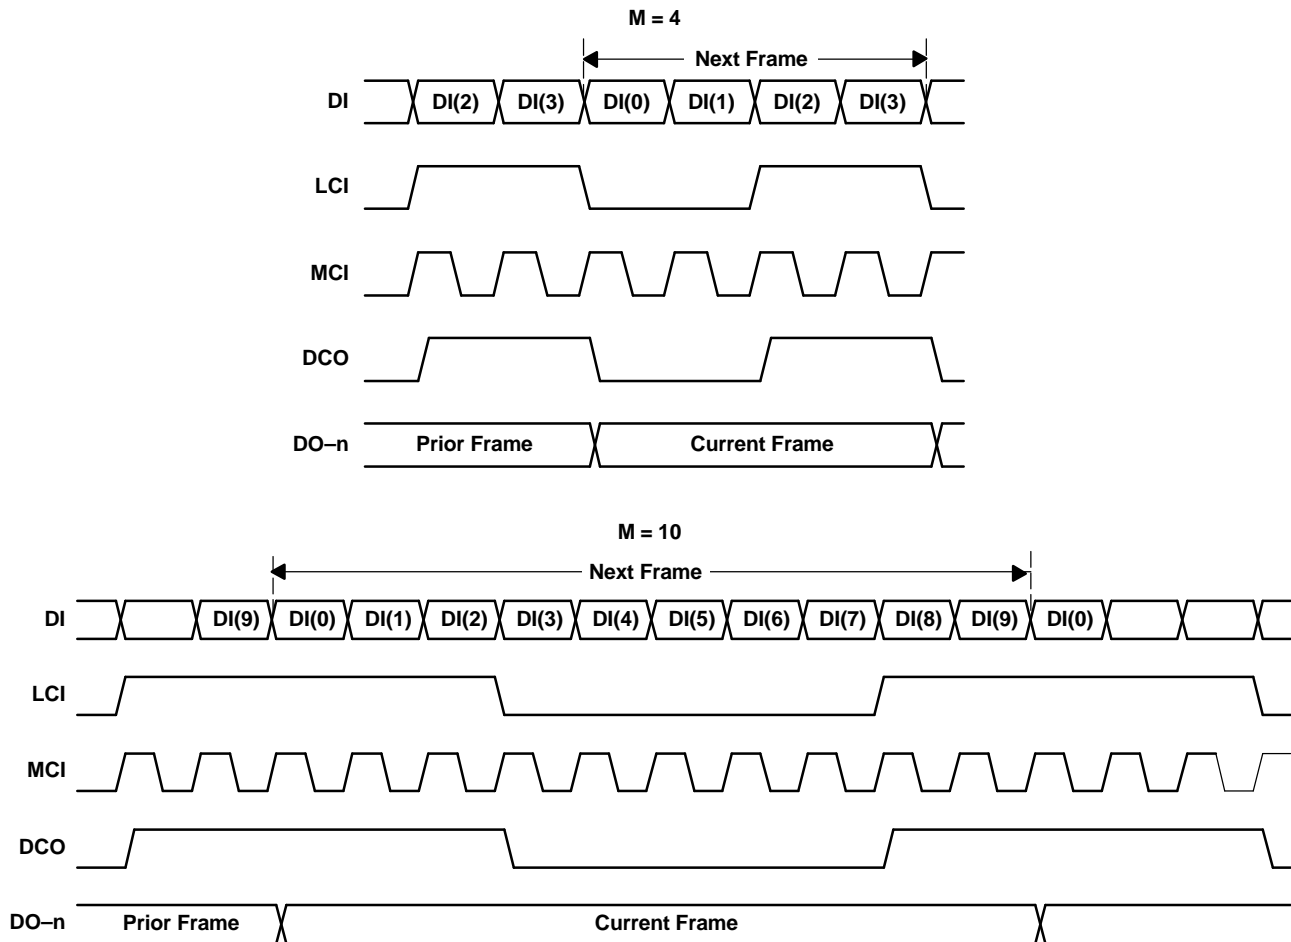

**Table 1. Example Combinations of LCI and MCI Supported by the SN65LVDS150 MuxIt Programmable PLL Frequency Multiplier**

M	LCI, MHz		MCI, MHz	
	MINIMUM	MAXIMUM	MINIMUM	MAXIMUM
4	5	50	20	200
10	5	20	50	200
20	5	10	100	200
40	5	5	200	200

**Table 2. Output Data Bits as a Function of Multiplier Value M**

	X = 1	X = 2	X = 3	X = 4	X = 5	X = 6	X = 7	X = 8	X = 9	X = 0
DO-9 output bit	DI-0	DI-1	DI-2	DI-3	DI-4	DI-5	DI-6	DI-7	DI-8	DI-9
DO-8 output bit	Invalid	DI-0	DI-1	DI-2	DI-3	DI-4	DI-5	DI-6	DI-7	DI-8
DO-7 output bit	Invalid	Invalid	DI-0	DI-1	DI-2	DI-3	DI-4	DI-5	DI-6	DI-7
DO-6 output bit	Invalid	Invalid	Invalid	DI-0	DI-1	DI-2	DI-3	DI-4	DI-5	DI-6
DO-5 output bit	Invalid	Invalid	Invalid	Invalid	DI-0	DI-1	DI-2	DI-3	DI-4	DI-5
DO-4 output bit	Invalid	Invalid	Invalid	Invalid	Invalid	DI-0	DI-1	DI-2	DI-3	DI-4
DO-3 output bit	Invalid	Invalid	Invalid	Invalid	Invalid	Invalid	DI-0	DI-1	DI-2	DI-3
DO-2 output bit	Invalid	Invalid	Invalid	Invalid	Invalid	Invalid	Invalid	DI-0	DI-1	DI-2
DO-1 output bit	Invalid	Invalid	Invalid	Invalid	Invalid	Invalid	Invalid	Invalid	DI-0	DI-1
DO-0 output bit	Invalid	Invalid	Invalid	Invalid	Invalid	Invalid	Invalid	Invalid	Invalid	DI-0

Additional information on output bit ordering in cascaded applications can be found in the MuxIt Application Report.

FUNCTIONAL BLOCK DIAGRAM

EQUIVALENT INPUT AND OUTPUT SCHEMATIC DIAGRAMS

Terminal Functions

TERMINAL NAME	TERMINAL NO.	I/O	LEVEL	DESCRIPTION
CO-, CO+	15, 16	Output	LVDS	Cascade output. This is used to connect to additional SN65LVDS152 units when the multiplexing ratio M (and M-clock) value is greater than 10.
CO_EN	7	Input	LVTTTL	Cascade output enable. Used to control the CO output. A high-level input enables the CO output, a low-level input disables the CO output.
DCO	27	Output	LVTTTL	Data clock output. This is the recovered (original frequency) clock that is synchronized to the deserialized parallel data.
DI+, DI-	1, 2	Input	LVDS	Link data input. This is the data being received from the source end of the serialized link. Also used for cascade data input from additional SN65LVDS152 units when the multiplexing ratio M value is greater than 10.
EN	14	Input	LVTTTL	Enable. Used to control overall device operation. A high-level input enables the device. A low-level input disables the device by resetting the internal latches and forcing the CO and LVTTTL outputs to a high-impedance state.
GND	3, 6, 9, 12, 13, 28	Power	NA	Circuit ground
LCI+, LCI-	4, 5	Input	LVDS	Link clock input. This is the data block synchronization clock received from the source end of the serialized link.
LVI	31	Input	LVTTTL	Lock/valid input. This is a signal required for proper MuxIt system operation. It is to be directly connected to the LVO output of an SN65LVDS150. It is used to inhibit the operation of this device until after the PLL has stabilized. A low level input disables the data and clock outputs, a high level input enables the outputs
MCI+, MCII-	29,30	Input	LVDS	M-clock input. This is the high frequency multiplied clock input from the local PLL frequency multiplier. It synchronizes the reception of the link data
DOI-0I-DOI-9	17-26	Output	LVTTTL	Parallel data outputs. Data from the serial shift register is transferred to the output data latches in synchronization with the rising edge of LCI.
V <sub>CC</sub>	8, 10, 11, 32	Power	NA	Supply voltage

## ABSOLUTE MAXIMUM RATINGS

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

		UNIT
Supply voltage range, $V_{CC}$ <sup>(2)</sup>		–0.5 V to 4 V
Input voltage range	EN, LVI, CO_EN	–0.5 V to 5.5 V
	LCI±, MCI±, DI±, CO±	–0.5 V to 4 V
Electrostatic discharge, human body model <sup>(3)</sup>	LCI±, MCI±, DI±, CO±, and GND	±12 kV
	All pins	±2 kV
Charged-device model <sup>(4)</sup>	All pins	±500 V
Continuous power dissipation		See Dissipation Rating Table
Storage temperature range		–65°C to 150°C
Lead temperature 1,6 mm (1/16 inch) from case for 10 seconds		260°C

- (1) Stresses beyond those listed under *absolute maximum ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *recommended operating conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltage values, except differential I/O bus voltages, are with respect to network ground terminal.
- (3) Tested in accordance with JEDEC Standard 22, Test Method A114-B.
- (4) Tested in accordance with JEDEC Standard 22, Test Method C101.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
