BATTERY-BACKUP SUPERVISOR FOR RAM RETENTION

FEATURES

- **Supply Current of 40 μA (Max)**
- **Battery Supply Current of 100 nA (Max)**
- **Precision 5-V Supply Voltage Monitor, Other Voltage Options on Request**
- **Backup-Battery Voltage Can Exceed V_{DD}**
- **Watchdog Timer With 800-ms Time-Out**
- **Power-On Reset Generator With Fixed 100-ms Reset Delay Time**
- **Voltage Monitor for Power-Fail or Low-Battery Monitoring**
- **Battery Freshness Seal (TPS3617 Only)**
- **8-Pin MSOP Package**
- **Temperature Range: –40° to +85°C**

APPLICATIONS

- **Fax Machines**
- **Set-Top Boxes**
- **Advanced Voice Mail Systems**
- **Portable Battery Powered Equipment**
- **Computer Equipment**
- **Advanced Modems**
- **Automotive Systems**
- **Portable Long-Time Monitoring Equipment**
- **Point-of-Sale Equipment**

DESCRIPTION

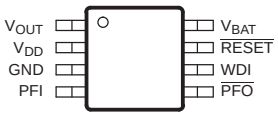
The TPS3617 and TPS3618 are battery-backup supervisors that monitor 5 V supplies. They provide a battery-backup function ideal for applications that require data retention of CMOS RAM during fault conditions. When the voltage at V_{DD} drops below a preset threshold (V_{IT}), the active low push-pull $\overline{\text{RESET}}$ output asserts, and V_{OUT} switches from V_{DD} to V_{BAT}. When V_{DD} rises above the trip threshold, V_{OUT} switches immediately from V_{BAT} to V_{DD}. The $\overline{\text{RESET}}$ output remains low until the delay time (t_d) expires. During power on, $\overline{\text{RESET}}$ is asserted when the supply voltage (V_{DD} or V_{BAT}) goes higher than 1.1 V.

The PFI and $\overline{\text{PFO}}$ pins are provided if additional voltage monitoring is needed. If the voltage at PFI is less than 1.15 V, the push-pull $\overline{\text{PFO}}$ pin will assert low. When the voltage at PFI exceeds the threshold voltage, $\overline{\text{PFO}}$ will go high.

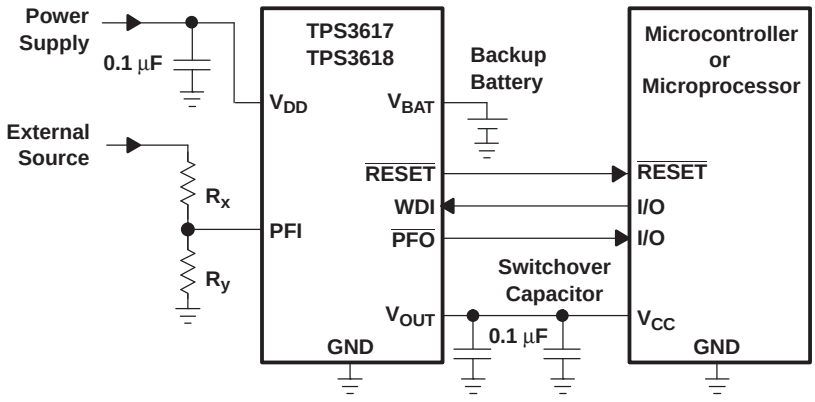
These devices also feature a watchdog timer pin (WDI) that monitors processor activity and asserts $\overline{\text{RESET}}$ if the the processor is inactive longer than the watchdog timeout period. If the watchdog timer is not used, the WDI pin should be left floating.

The TPS3617 and TPS3618 are available in an 8-pin MSOP package and are characterized for operation over a temperature range of –40°C to +85°C.

MSOP (DGK) Package
(TOP VIEW)



ACTUAL SIZE
3,05 mm x 4,98 mm



This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

PACKAGE INFORMATION(1)

PRODUCT	NOMINAL SUPPLY VOLTAGE	THRESHOLD VOLTAGE (V_{IT})(2)	SPECIFIED TEMPERATURE RANGE	PACKAGE MARKING	ORDERING NUMBER	TRANSPORT MEDIA, QUANTITY
TPS3617-50	5V	4.55V	–40°C to +125°C	ASD	TPS3617-50DGK	Tube, 80
					TPS3617-50DGKR	Tape and Reel, 2500
TPS3618-50				ANK	TPS3618-50DGKT	Tape and Reel, 250
					TPS3618-50DGKR	Tape and Reel, 2500

(1) For the most current package and ordering information, see the Package Option Addendum at the end of this data sheet, or refer to our web site at www.ti.com.
(2) For other threshold votages, contact the local TI sales office for availability and lead time.

ABSOLUTE MAXIMUM RATINGS

over operating free-air temperature (unless otherwise noted)(1)

	TPS3617, TPS3618	UNIT
Input voltage range, V_{DD}	–0.3 to 7	V
Input voltage range, PFI pin	–0.3 to (V_{DD} + 0.3)	V
WDI pin	–0.3 to (V_{DD} + 0.3)	V
Continuous output current at V_{OUT}, I_O	400	mA
All other pins, I_O	±10	mA
Operating junction temperature range, T_J(2)	–40 to +85	°C
Storage temperature range, T_{STG}	–65 to +150	°C
Lead temperature soldering 1,6 mm (1/16 inch) from case for 10 seconds	+260	°C
Continuous total power dissipation	See Dissipation Rating Table	

(1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) Due to the low dissipated power in this device, it is assumed that $T_J = T_A$.

DISSIPATION RATING TABLE

PACKAGE	$T_A \leq$ +25°C POWER RATING	DERATING FACTOR ABOVE T_A = +25°C	T_A = +70°C POWER RATING	T_A = +85°C POWER RATING
DGK	470 mW	3.76 mW/°C	301 mW	241 mW

ELECTRICAL CHARACTERISTICS

1.65 V ≤ V_{DD} ≤ 5.5 V, R_{LRESET} = 1 MΩ, C_{LRESET} = 50 pF, over operating temperature range (T_J = –40°C to +85°C), unless otherwise noted. Typical values are at T_J = +25°C.

	WDI input transition rise and fall rate, Δt/ΔV					100	ns/V
I_I	PFI input current		PFI voltage < V_{DD}	–25		25	nA
I_{OS}	$\overline{PFO}$ short-circuit current		$\overline{PFO}$ = 0 V, V_{DD} = 1.8 V			–0.3	mA
			$\overline{PFO}$ = 0 V, V_{DD} = 3.3 V			–1.1	
			$\overline{PFO}$ = 0 V, V_{DD} = 5 V			–2.4	

(1) The lowest supply voltage at which $\overline{RESET}$ becomes active. t_r, V_{DD} ≥ 15 µs/V.
(2) To ensure the best stability of the threshold voltage, a bypass capacitor (ceramic, 0.1 µF) should be placed near the supply terminals.
(3) For V_{DD} < 1.6 V, V_{OUT} switches to V_{BAT} regardless of V_{BAT}.
(4) For details on how to optimize current consumption when using WDI, refer to the *Watchdog* section of this data sheet.

ELECTRICAL CHARACTERISTICS (continued)

1.65 V ≤ V_{DD} ≤ 5.5 V, R_{LRESET} = 1 MΩ, C_{LRESET} = 50 pF, over operating temperature range (T_J = –40°C to +85°C), unless otherwise noted. Typical values are at T_J = +25°C.

DETAILED DESCRIPTION

BATTERY FRESHNESS SEAL (TPS3617 Only)

The battery freshness seal of the TPS3617 family disconnects the backup battery from the internal circuitry until it is needed. This ensures that the backup battery connected to V_{BAT} should be fresh when the final product is put to use. The following steps explain how to enable the freshness seal mode:

1. Connect V_{BAT} ($V_{BAT} > V_{BAT(min)}$).
2. Ground $\overline{PFO}$.
3. Connect PFI to V_{DD} (PFI = V_{DD}).
4. Connect V_{DD} to power supply ($V_{DD} > V_{IT}$) and keep connected for 5 ms < t < 35 ms.

The battery freshness seal mode is disabled by the positive-going edge of $\overline{RESET}$ when V_{DD} is applied.

POWER-FAIL COMPARATOR (PFI AND $\overline{PFO}$)

An additional comparator monitors voltages other than the nominal supply voltage. The power-fail-input (PFI) can be compared with an internal voltage reference of 1.15 V. If the input voltage falls below the power-fail threshold ($V_{(PFI)}$) of 1.15 V typical, the power-fail output ($\overline{PFO}$) goes low. If it goes above $V_{(PFI)}$ plus about 12-mV hysteresis, the output returns to high. By connecting two external resistors it is possible to supervise any voltages above $V_{(PFI)}$. The sum of both resistors should be about 1 MΩ, to minimize power consumption and also to ensure that the current in the PFI pin can be neglected compared with the current through the resistor network. The tolerance of the external resistors should be not more than 1% to ensure minimal variation of the sensed voltage. If the power-fail comparator is unused, connect PFI to ground and leave the $\overline{PFO}$ unconnected.

WATCHDOG

In a microprocessor- or DSP-based system, it is not only important to supervise the supply voltage, it is also important to ensure correct program execution. The task of a watchdog is to ensure that the program is not stalled in an indefinite loop. The microprocessor, microcontroller, or DSP has to toggle the watchdog input within 0.8 s typically, to avoid a timeout from occurring. Either a low-to-high or a high-to-low transition resets the internal watchdog timer. If the input is unconnected, the watchdog is disabled and should be retriggered internally. See Figure 13 for the watchdog timing diagram.

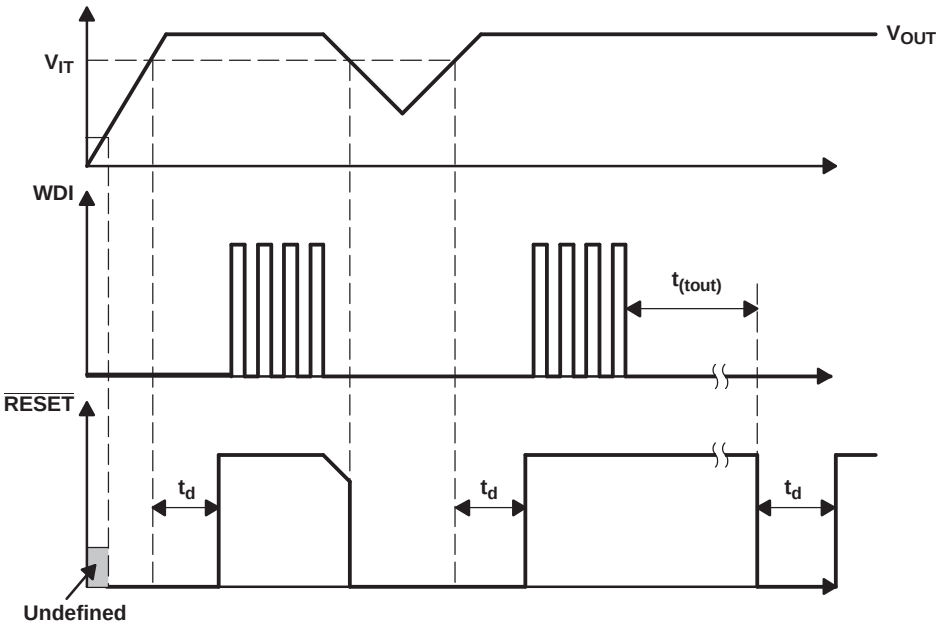

Figure 13. Watchdog Timing

DETAILED DESCRIPTION (continued)

SAVING CURRENT WHILE USING THE WATCHDOG

The watchdog input is internally driven low during the first 7/8 of the watchdog time-out period, then momentarily pulses high, resetting the watchdog counter. For minimum watchdog input current (minimum overall power consumption), leave WDI low for the majority of the watchdog time-out period, pulsing it low-high-low once within 7/8 of the watchdog time-out period to reset the watchdog timer. If instead, WDI is externally driven high for the majority of the time-out period, a current of e.g. 5.0 V/40 kΩ ≈ 125 µA can flow into WDI.

BACKUP-BATTERY SWITCHOVER

In case of a brownout or power failure, it may be necessary to preserve the contents of RAM. If a backup battery is installed at V_{BAT}, the device automatically switches the connected RAM to backup power when V_{DD} fails. In order to allow the backup battery (e.g., a 3.6-V lithium cell) to have a higher voltage than V_{DD}, these supervisors should not connect V_{BAT} to V_{OUT} when V_{BAT} is greater than V_{DD}. V_{BAT} only connects to V_{OUT} (through a 15-Ω switch) when V_{DD} falls below V_{IT} and V_{BAT} is greater than V_{DD}. When V_{DD} recovers, switchover is deferred either until V_{DD} crosses V_{BAT}, or until V_{DD} rises above the reset threshold V_{IT}. V_{OUT} connects to V_{DD} through a 1-Ω (max) PMOS switch when V_{DD} crosses the reset threshold.

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
TBD: The Pb-Free/Green conversion plan has not been defined.
Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.
Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.
Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

NOTES:
A. All linear dimensions are in millimeters.
B. This drawing is subject to change without notice.
C. Body length does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.15 per end.
D. Body width does not include interlead flash. Interlead flash shall not exceed 0.50 per side.
E. Falls within JEDEC MO–187 variation AA, except interlead flash.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
