

# DUAL-CHANNEL 10- $\Omega$ SPST ANALOG SWITCH SCDS184C-JANUARY 2005-REVISED JULY 2007

## **FEATURES**

- Low ON-State Resistance (10  $\Omega$ ) •
- **Control Inputs Are 5-V Tolerant** •
- Low Charge Injection .
- **Excellent ON-State Resistance Matching**
- Low Total Harmonic Distortion (THD) •
- 1.65-V to 5.5-V Single-Supply Operation •
- Latch-Up Performance Exceeds 100 mA Per JESD 78. Class II
- ESD Performance Tested Per JESD 22
  - 2000-V Human-Body Model (A114-B, Class II)
  - 1000-V Charged-Device Model (C101)

## APPLICATIONS

- Sample-and-Hold Circuits
- **Battery-Powered Equipment** •
- Audio and Video Signal Routing •
- **Communication Circuits**
- **Cell Phones**
- Low-Voltage Data-Acquisition Systems
- **PDAs**

### **DESCRIPTION/ORDERING** INFORMATION

The TS5A2066 is a dual single-pole single-throw (SPST) analog switch that is designed to operate from 1.65 V to 5.5 V. This device can handle both digital and analog signals, and signals up to V<sub>+</sub> can be transmitted in either direction.

#### Summary of Characteristics<sup>(1)</sup>

| Configuration   | Dual Single Pole<br>Single Throw<br>(2 × SPST) |
|---|--|
| Number of channels  | 2  |
| ON-state resistance (ron)                                     | 7.5 Ω  |
| ON-state resistance match ( $\Delta r_{on}$ )                 | 0.4 Ω  |
| ON-state resistance flatness (r <sub>on(flat)</sub> )         | 3.5 Ω  |
| Turn-on/turn-off time (t <sub>ON</sub> /t <sub>OFF</sub> )    | 5.8 ns/3.6 ns                                  |
| Charge injection (Q <sub>C</sub> )                            | 1 pC   |
| Bandwidth (BW)  | 400 MHz  |
| OFF isolation (O <sub>ISO</sub> )                             | –68 dB   |
| Crosstalk (X <sub>TALK</sub> )                                | –66 dB   |
| Total harmonic distortion (THD)                               | 0.01%  |
| Leakage current (I <sub>COM(OFF)</sub> /(I <sub>NC(OFF)</sub> | ±50 nA   |
| Power-supply current (I <sub>+</sub> )                        | 0.1 µA   |
| Package options   | 8-pin DSBGA, SSOP,<br>or VSSOP                 |

(1)  $V_{+} = 5 \text{ V}$  and  $T_{A} = 25^{\circ}\text{C}$

# TS5A2066 DUAL-CHANNEL 10- $\Omega$ SPST ANALOG SWITCH

SCDS184C-JANUARY 2005-REVISED JULY 2007

#### **ORDERING INFORMATION**

| T <sub>A</sub> | PACKAGE <sup>(1)(2)</sup>   | ORDERABLE PART NUMBER | TOP-SIDE MARKING <sup>(3)</sup> |      |
|----------------|---|-----------------------|---------------------------------|------|
| –40°C to 85°C  | NanoFree™ – WCSP (DSBGA)<br>0.23-mm Large Bump – YZP<br>(Pb-free) | Reel of 3000          | TS5A2066YZPR                    | J4_  |
|                | SSOP – DCT  | Reel of 3000          | TS5A2066DCTR                    | JAG  |
|                | VSSOP – DCU   | Reel of 3000          | TS5A2066DCUR                    | JAG_ |

Package drawings, thermal data, and symbolization are available at www.ti.com/packaging. (1)

(2)For the most current package and ordering information, see the Package Option Addendum at the end of this document, or see the TI website at www.ti.com.

DCT: The actual top-side marking has three additional characters that designate the year, month, and wafer fab/assembly site. (3) DCU: The actual top-side marking has one additional character that designates the wafer fab/assembly site. YZP: The actual top-side marking has three preceding characters to denote year, month, and sequence code, and one following character to designate the wafer fab/assembly site. Pin 1 identifier indicates solder-bump composition (1 = SnPb, • = Pb-free).

#### **FUNCTION TABLE**

(1) Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

The algebraic convention, whereby the most negative value is a minimum and the most positive value is a maximum (2)

All voltages are with respect to ground, unless otherwise specified. (3)

The input and output voltage ratings may be exceeded if the input and output clamp-current ratings are observed. (4)

(5) This value is limited to 5.5 V maximum.

(6) The package thermal impedance is calculated in accordance with JESD 51-7.

## Electrical Characteristics for 5-V Supply<sup>(1)</sup>

 $V_{\star}$  = 4.5 V to 5.5 V,  $T_{A}$  =  $-40^{\circ}C$  to 85°C (unless otherwise noted)

| 1   | NO1  | Normally open                        |
| 2   | COM1 | Common                               |
| 3   | IN2  | Digital control to connect COM to NO |
| 4   | GND  | Digital ground                       |
| 5   | NO2  | Normally open                        |
| 6   | COM2 | Common                               |
| 7   | IN1  | Digital control to connect COM to NO |
| 8   | V+   | Power supply                         |

#### PARAMETER DESCRIPTION

| SYMBOL                            | DESCRIPTION  |
|-----------------------------------|--|
| V <sub>COM</sub>                  | Voltage at COM   |
| V <sub>NO</sub>                   | Voltage at NO  |
| r <sub>on</sub>                   | Resistance between COM and NO ports when the channel is ON   |
| Δr <sub>on</sub>                  | Difference of r <sub>on</sub> between channels in a specific device  |
| r <sub>on(flat)</sub>             | Difference between the maximum and minimum value of ron in a channel over the specified range of conditions  |
| I <sub>NO(OFF)</sub>              | Leakage current measured at the NO port, with the corresponding channel (NO to COM) in the OFF state   |
| I <sub>NO(ON)</sub>               | Leakage current measured at the NO port, with the corresponding channel (NO to COM) in the ON state and the output (COM) open  |
| I <sub>COM(OFF)</sub>             | Leakage current measured at the COM port, with the corresponding channel (COM to NO) in the OFF state  |
| I <sub>COM(ON)</sub>              | Leakage current measured at the COM port, with the corresponding channel (COM to NO) in the ON state and the output (NO) open  |
| VIH                               | Minimum input voltage for logic high for the control input (IN)  |
| VIL                               | Maximum input voltage for logic low for the control input (IN)   |
| VI                                | Voltage at the control input (IN)  |
| I <sub>IH</sub> , I <sub>IL</sub> | Leakage current measured at the control input (IN)   |
| t <sub>ON</sub>                   | Turn-on time for the switch. This parameter is measured under the specified range of conditions and by the propagation delay between the digital control (IN) signal and analog output (COM or NO) signal when the switch is turning ON.   |
| tOFF                              | Turn-off time for the switch. This parameter is measured under the specified range of conditions and by the propagation delay between the digital control (IN) signal and analog output (COM or NO) signal when the switch is turning OFF.   |
| Q <sub>C</sub>                    | Charge injection is a measurement of unwanted signal coupling from the control (IN) input to the analog (NO or COM) output. This is measured in coulomb (C) and measured by the total charge induced due to switching of the control input. Charge injection, $Q_C = C_L \times \Delta V_{COM}$ , $C_L$ is the load capacitance and $\Delta V_{COM}$ is the change in analog output voltage. |
| C <sub>NO(OFF)</sub>              | Capacitance at the NO port when the corresponding channel (NO to COM) is OFF   |
| C <sub>NO(ON)</sub>               | Capacitance at the NO port when the corresponding channel (NO to COM) is ON  |
| C <sub>COM(OFF)</sub>             | Capacitance at the COM port when the corresponding channel (COM to NO) is OFF  |
| C <sub>COM(ON)</sub>              | Capacitance at the COM port when the corresponding channel (COM to NO) is ON   |
| CI                                | Capacitance of IN  |
| O <sub>ISO</sub>                  | OFF isolation of the switch is a measurement of OFF-state switch impedance. This is measured in dB in a specific frequency, with the corresponding channel (NO to COM) in the OFF state.   |
| X <sub>TALK</sub>                 | Crosstalk is a measurement of unwanted signal coupling from an ON channel to an adjacent ON channel (NC1 to NC2). This is measured in a specific frequency and in dB.  |
| BW                                | Bandwidth of the switch. This is the frequency in which the gain of an ON channel is -3 dB below the DC gain.  |
| THD                               | Total harmonic distortion is defined as the ratio of the root mean square (RMS) value of the second, third, and higher harmonics to the magnitude of fundamental harmonic.   |
| I+                                | Static power-supply current with the control (IN) pin at V <sub>+</sub> or GND   |

<sup>(1)</sup> The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

<sup>(2)</sup> Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

<sup>(3)</sup> MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

**Important Information and Disclaimer:**The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

#### **IMPORTANT NOTICE**

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
