

# General-Purpose CMOS Analog Switches

IH5040-IH5045/IH5047

## General Description

The IH5040 family consists of seven CMOS analog switches that are intended for general-purpose applications. These switches are latch-up proof, break-before-make single, dual, and quad versions of the popular switch formats SPST, SPDT, DPST, and 4PST. Key features of the family include a low, 1nA leakage current and a quiescent current of less than 1µA.

Maxim's IH5040 family has faster switching times than the original manufacturer's devices. All devices are bidirectional and maintain almost constant on resistance throughout their operating range. These switches are guaranteed to operate from ±4.5V to ±18V, and will switch input signals that include the supplies.

## Applications

- PBX, PABX
- Guidance and Control Systems
- Test Equipment
- Sample-and-Holds
- Military Radios

## Features

- ◆ Improved Second Source
- ◆ Guaranteed ±4.5V to ±18V Operation
- ◆ Input Voltage Range Includes Supplies
- ◆ Latchup-Proof Construction
- ◆ TTL/CMOS Logic Compatible
- ◆ >1µA Quiescent Current
- ◆ Monolithic, Low-Power CMOS Design

**Note 1:** Signals on S, D, and digital inputs that exceed V- or V+ will be clamped by internal diodes. Limit forward diode current to 30mA maximum.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.
