

PI5C6800

10-Bit Bus Switch with Precharged Outputs

Features

- Near-Zero propagation delay
- 5Ω switch connection between two ports
- Ultra-low quiescent power (0.2µA typical)
- · Ideally suited for notebook applications
- A port is hot swapable
- Packaging (Pb-free & Green available):
- -24-pin 150-mil wide QSOP (Q)
- 24-pin 173-mil wide TSSOP (L)

Description

Pericom's Semiconductor's PI5C6800 is a 10-bit bus switch with low On-State resistance. The bus switch creates no additional propagation delay.

The switch is turned on by a single enable (\overline{ON}) input. When \overline{ON} is LOW, the switch is on and port A is connected to port B. When \overline{ON} is HIGH, the switch between port A and port B is open and the B port is precharged to BIASV through the equivalent of a 10k-ohm resistor.

Truth Table⁽¹⁾

| Function | ŌN | B1 - B10 |
|-----------|----|----------|
| Connect | L | A1- A10 |
| Precharge | Н | BIASV |

Notes:

1. H = High Voltage Level, L = Low Voltage Level

Absolute Maximum Ratings Over Free-Air Temperature Range⁽¹⁾

(Above which the useful life may be impaired. For user guidelines, not tested.)

| Storage Temperature | 65°C to +150°C |
|--|----------------|
| Supply Voltage Range | 0.5V to +7V |
| DC Input Voltage ⁽²⁾ | 0.5V to +7V |
| Input Clamp Current, I _{IK} (V ₁ <0) | 50mA |
| DC Output Current | 120mA |
| Power Dissipation ⁽³⁾ | 0.5W |

Notes:

- 1. Stresses greater than those listed under MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.
- 2. The input and output negative-voltage ratings may be exceeded if the input and output clamp-current ratings are observed.
- 3. The maximum package power dissipation is calculated using a junction temperatue of 150°C and a board trace length of 750 mils.

Recommended Operating Conditions

| Parameters | Description | Min. | Тур. | Units |
|-----------------|----------------------------|------|-----------------|-------|
| V _{CC} | Supply Voltage | 4 | 5.5 | |
| BIASV | Supply Voltage | 0 | V _{CC} | V |
| V _{IH} | High-level input voltage | 2 | | v |
| V _{IL} | Low-level input voltage | | 0.8 | |
| TA | Operating free-air voltage | -40 | 85 | °С |

Electrical Characteristics (Over Recommended Operating Free-air Temperature Range)

| Parameters | Test Condidtion | | | Typ. ⁽²⁾ | Max. | Units |
|--------------------------------|--|------------------------------|-------|---------------------|------|-------|
| V _{IK} | $V_{CC} = 4.5 V, I_I = -13$ | 3mA | | | -1.2 | V |
| II | $V_{\rm CC} = 5.5 V, V_{\rm I} = 5.$ | 5V or GND | | | ±5 | μΑ |
| IO | $V_{CC} = 4.5V, BIASV$ | $V = 2.4V, V_{O} = 0$ | -0.20 | | | mA |
| I _{CC} | $V_{CC} = 5.5 V$, $I_O = 0$, $V_I = V_{CC}$ or GND | | | | 3 | mA |
| C _{IN} | $V_I = 3V \text{ or } 0$ | | | 3.5 | | тĒ |
| C _{OFF} | $V_{O} = 3V \text{ or } 0$, Switch Off | | | 4.5 | | pF |
| | $V_{CC} = 4V$ | $V_{I} = 2.4V, I_{I} = 15mA$ | | 14 | 22 | |
| R _{ON} ⁽¹⁾ | $V_{\rm CC} = 4.5 V$ | $V_{I} = 0V, I_{I} = 64mA$ | | 5 | 7 | Ω |
| KON() | | $V_{I} = 0V, I_{I} = 30mA$ | | 5 | 7 | |
| | $V_{I} = 2.4V, I_{I} = 15mA$ | | | 10 | 15 | |

Notes:

2. All typical values are at $V_{CC} = 5V$, $T_A = 25^{\circ}C$.

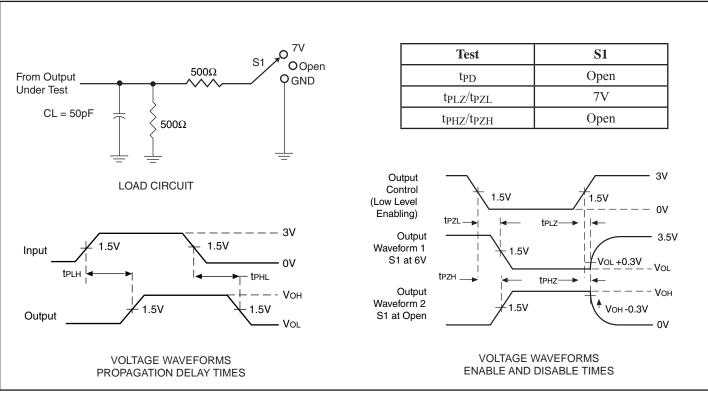

^{1.} Measured by the voltage drop between the A and B terminals at the indicated current through the switch. On-State resistance is determined by the lower of the voltages of the two (A or B) terminals.

| Donomotor | Test Conditions | Conditiona From (Input) |) To (Input) - | $V_{CC} = 5V \pm 0.5V$ | | $V_{CC} = 4V$ | | Units | |
|------------------|-----------------|-------------------------|----------------|------------------------|------|---------------|------|-------|----|
| Parameter | Test Conditions | From (Input) | | Min. | Max. | Min. | Max. | Units | |
| $t_{PD}^{(1)}$ | | A or B | B or A | | 0.25 | | 0.25 | | |

| t _{PZL} | BIASV = 3V | ON | ON | A or B | 3.6 | 5 | | 6 | ns |
| t _{PHZ} | BIAS = GND | ON | | A or B | 2.7 | 5 | | 5.5 | |
| t _{PLZ} | BIAS = 3V | | A OI D | 3 | 5 | | 5.5 | | |

Switching Characteristics (Over Recommended Operating Free-air Temperature Range, $C_L = 50 pF$)

Notes:

1. This parameter is warranted but not production tested. The propagation delay is based on the RC time constant of the typical On-State resistance of the switch and a load capacitance of 50pF, when driven by an ideal voltage source (zero output impedance).

Parameter Measurements

Notes:

- $C_{\rm L}$ includes probe and jig capacitance.
- Waveform 1 is for an output with internal conditions such that the output is LOW except when disabled by the output control.
- Waveform 2 is for an output with internal conditions such that the output is HIGH except when disabled by the output control.
- All input pulses are supplied by generators having the following characteristics: PRR < 10MHz, $Z_0 = 50\Omega$, $t_r \le 2.5$ ns, $t_f \le 2.5$ ns.
- The outputs are measured one at a time with one transition per measurement.
- t_{PLZ} and t_{PHZ} are the same as t_{dis} .
- t_{PZL} and t_{PZH} are the same as $t_{en}.$
- t_{PLH} and t_{PHL} are the same as t_{pd} .

Applications Information

Logic Inputs

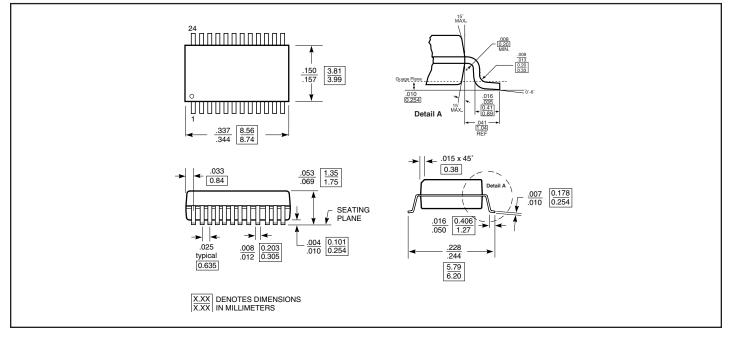

The logic control inputs can be driven up to +5.5V regardless of the supply voltage. For example, given a +5.0V supply, control inputs may be driven low to 0V and high to 5.5V. Driving control inputs Rail-to-Rail[®] minimizes power consumption.

Power-Supply Sequencing

Proper power-supply sequencing is recommended for all CMOS devices. Always apply V_{CC} before applying signals to the input/ output or control pins.

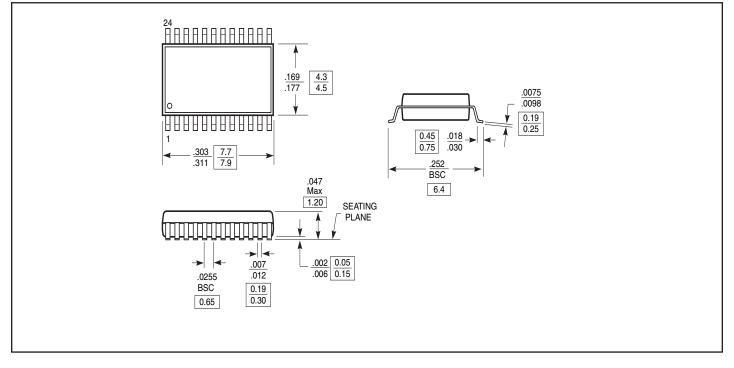

Rail-to-Rail is a registered trademark of Nippon Motorola, Ltd.
