

#### ST1G3234

# 1-bit dual supply bus buffer level translator with A-side series resistor

#### **Features**

- High speed: t<sub>PD</sub> = 4.4ns (Max.) at T<sub>A</sub> = 85°C V<sub>CCB</sub> = 1.65V; V<sub>CCA</sub> = 3.0V
- Low power dissipation:
  I<sub>CCA</sub> = I<sub>CCB</sub> = 5μA(Max.) at T<sub>A</sub> = 85°C
- Symmetrical output impedance: II<sub>OHA</sub>| = I<sub>OLA</sub> = 10mA Min at V<sub>CCA</sub> = 2.75V; V<sub>CCB</sub> = 1.4V to 3.6V II<sub>OHA</sub>| = I<sub>OLA</sub> = 6mA Min at V<sub>CCA</sub> = 2.3V; V<sub>CCB</sub> = 1.4V to 3.6V
- Balanced propagation delays: t<sub>PLH</sub> ≅ t<sub>PHL</sub>
- Power down protection on inputs and outputs
- $26\Omega$  series resistor on A-side outputs
  - Operating voltage range:
     V<sub>CCA</sub>(Opr) = 1.4V to 3.6V (1.2V data retent)
     V<sub>CCB</sub>(Opr) = 1.4V to 3.6V (1.2V data retent)
- Max data rates:
   380Mbps (1.8V to 3.3V translation)
   260Mbps (<1.8V to 3.3V translation)</li>
   260Mbps (translate to 2.5V)
   210Mbps (translate to 1.5V)
- Latch-up performance exceeds 500mA (JESD 17)
- ESD performance: HBM > 2000V (MIL STD 883 method 3015); MM > 200V
- R<sub>O</sub>HS compliant for Flip-Chip package

#### **Description**

The ST1G3234 is a dual supply low voltage CMOS 1-Bit bus buffer level translator fabricated with sub-micron silicon gate and five-layer metal wiring C<sup>2</sup>MOS technology. Designed for use as an interface between a 3.3V bus and a 2.5V or 1.8V bus in a mixed 3.3V/1.8V, 3.3V/2.5V, 1.8V/1.4V and 2.5V/1.8V supply systems, it achieves high speed operation while maintaining the CMOS low power dissipation.

This IC is intended for one-way asynchronous communication between data buses. The input and output power down protections disable the device when both power supply are down, so that the buses are effectively isolated.

The input tolerant buffers allow to translate  $V_{CCB}$  compatible signals and greater signals than  $V_{CCB}$  up/down to  $V_{CCA}. \label{eq:vccb}$ 

All inputs are equipped with protection circuits against static discharge, giving them ESD immunity and transient excess voltage.

ST1G3234 Maximum rating

#### 3 Maximum rating

Stressing the device above the rating listed in the "Absolute Maximum Ratings" table may cause permanent damage to the device. These are stress ratings only and operation of the device at these or any other conditions above those indicated in the Operating sections of this specification is not implied. Exposure to Absolute Maximum Rating conditions for extended periods may affect device reliability. Refer also to the STMicroelectronics SURE Program and other relevant quality documents.

Table 3. Absolute maximum ratings

| Symbol           | Parameter  | Value                          | Unit |
|------------------|--|--------------------------------|------|
| V <sub>CCA</sub> | Output supply voltage  | -0.5 to +4.6                   | V    |

Note: 1  $C_{PD}$  is defined as the value of the IC's internal equivalent capacitance which is calculated from the operating current consumption without load. (Refer to Test Circuit). Average current can be obtained by the following equation.  $I_{CC(opr)} = C_{PD} \times V_{CC} \times f_{IN} + I_{CC}/4$  (per circuit)

#### 7 Package mechanical data

In order to meet environmental requirements, ST offers these devices in ECOPACK® packages. These packages have a Lead-free second level interconnect . The category of second level interconnect is marked on the package and on the inner box label, in compliance with JEDEC Standard JESD97. The maximum ratings related to soldering conditions are also marked on the inner box label. ECOPACK is an ST trademark. ECOPACK specifications are available at: www.st.com
