## AN5870K

## Wide bandwidth analog switch IC

## Overview

The AN5870K is a wide bandwidth analog switch IC of 300 MHz operation. It is usable for RGB signal and horizontal/vertical synchronizing signals, and it has a built-in $75 \Omega$ driver for video signal. In addition, it has also realized a high speed operation by the adoption of CMOS process for its sync. signal processing circuit. It is usable in a broad range from a popular type monitor to a high definition monitor.

## Features

- 2-input 1-output circuit (DC switch type)
- Built-in 6 dB amplifier for RGB signal ( 1.5 dB for 75 $\Omega$ termination)
- Built-in sync. separation circuit (Supporting sync. on green and power save)
- Higher speed horizontal / vertical sync. signal circuit $\left(\mathrm{t}_{\text {delay }}=20 \mathrm{~ns}\right)$

## Applications

- Monitors

Note) The package of this product will be changed to lead-free type (SDIP030-P-0400B). See the new package dimensions section later of this datasheet.

## Technical Information

## - Operational explanation

1. SW block

Switches over R, G, B, H, V signal of 2 systems.

| SW pin (pin 22) | Selected pins |
| :---: | :---: |
| In low-level | R in 1 (pin 1), G in 1 $(\operatorname{pin} 5), \mathrm{B}$ in $1(\operatorname{pin} 9), \mathrm{H}$ in $1(\operatorname{pin} 13), \mathrm{V}$ in $1(\operatorname{pin} 15)$ |
| In high-level | R in 2 (Pin 3), G in 2 $(\operatorname{pin} 7), \mathrm{B}$ in $2(\operatorname{pin} 11), \mathrm{H}$ in $2(\operatorname{pin} 14), \mathrm{V}$ in 2 (pin 16) |

2. High-level signal detection block

Sync.-in pin (pin 21) is a pin for inputting the sync.-on green signal and it is separated into the composite sync. signal (composite sync.) inside. H-in 1 and 2 pins (pin 13 or pin 14) are input pins for the video signal and the separated horizontal signal.

The high-level signal detection block discriminates the presence of H -in signal which is selected in SW block and provides the output to H -out pin (pin 19) in the following manner.

| Input signal |  | Output signal |
| :---: | :---: | :---: |
| Sync.-in pin (pin 21) | H-in pin (pin 13 • pin 14) | H-out pin (pin 19) |
| $\bullet$ | $\bullet$ | H-in signal |
| - |  | Sync.in signal |
|  | $\bullet$ | H-in signal |
|  |  | DC (state of sync.-in pin) |

H signal detection pin (pin 20) voltage becomes under 1 V or over 4 V if H . sync. signal is not inputted.

The output signal for the H. sync. signal detection pin voltage becomes as follows and it has hysteresis characteristics. It is possible to adjust the H. sync. signal detection time by means of an external capacitor.

## Usage Notes

1. About C22 $0.01 \mu \mathrm{~F}$ capacitor (refer to Application Circuit Example)

In the case of evaluation board for this IC without heat sink, a resonance phenomena takes place at approx. 400 MHz between pin 23 B -out pin and pin 22 SW pin and affects the frequency characteristic of B-out pin.

To solve the above problem, the correction can be made by attaching $\mathrm{C} 220.01 \mu \mathrm{~F}$ capacitor between pin 22 SW pin and GND at a place as close to the IC as possible.

In the case of using this IC, study if the correction is necessary.
2. About latch-up

In our latch-up testing, a voltage charged to 200 pF capacitor is applied to the IC pin, in the state of providing only a voltage to the power supply pin of the IC, and we confirm that the latch-up does not occur up to 200 V .

It is confirmed that this IC does not cause latch-up up to 200 V under a condition including the peripheral components. (Refer to Application Circuit Example).

Be careful to pin 20, pin 21, pin 28 and pin 30 which are especially weak.
In the case of using this IC, the peripheral components to be attached externally should be placed as close to the IC as possible.

(1) An export permit needs to be obtained from the competent authorities of the Japanese Government if any of the products or technologies described in this material and controlled under the "Foreign Exchange and Foreign Trade Law" is to be exported or taken out of Japan.
(2) The technical information described in this material is limited to showing representative characteristics and applied circuit examples of the products. It does not constitute the warranting of industrial property, the granting of relative rights, or the granting of any license.
(3) The products described in this material are intended to be used for standard applications or general electronic equipment (such as office equipment, communications equipment, measuring instruments and household appliances).
Consult our sales staff in advance for information on the following applications:
- Special applications (such as for airplanes, aerospace, automobiles, traffic control equipment, combustion equipment, life support systems and safety devices) in which exceptional quality and reliability are required, or if the failure or malfunction of the products may directly jeopardize life or harm the human body.
- Any applications other than the standard applications intended.
(4) The products and product specifications described in this material are subject to change without notice for reasons of modification and/or improvement. At the final stage of your design, purchasing, or use of the products, therefore, ask for the most up-to-date Product Standards in advance to make sure that the latest specifications satisfy your requirements.
(5) When designing your equipment, comply with the guaranteed values, in particular those of maximum rating, the range of operating power supply voltage and heat radiation characteristics. Otherwise, we will not be liable for any defect which may arise later in your equipment.
Even when the products are used within the guaranteed values, redundant design is recommended, so that such equipment may not violate relevant laws or regulations because of the function of our products.
(6) When using products for which dry packing is required, observe the conditions (including shelf life and after-unpacking standby time) agreed upon when specification sheets are individually exchanged.
(7) No part of this material may be reprinted or reproduced by any means without written permission from our company.

## Please read the following notes before using the datasheets

A. These materials are intended as a reference to assist customers with the selection of Panasonic semiconductor products best suited to their applications.
Due to modification or other reasons, any information contained in this material, such as available product types, technical data, and so on, is subject to change without notice.
Customers are advised to contact our semiconductor sales office and obtain the latest information before starting precise technical research and/or purchasing activities.
B. Panasonic is endeavoring to continually improve the quality and reliability of these materials but there is always the possibility that further rectifications will be required in the future. Therefore, Panasonic will not assume any liability for any damages arising from any errors etc. that may appear in this material.
C. These materials are solely intended for a customer's individual use.
