## FSAV331

## Dual Channel 4:1 Video Switch

## General Description

The Fairchild video switch FSAV331 is a dual $4: 1$ high speed video switch which can be configured as either multiplexer or demultiplexer. Low On Resistance allows inputs to be connected to outputs without adding propagation delay or generating additional ground bounce noise.

When the OE Pin is LOW, $\mathrm{S}_{0}$ and $\mathrm{S}_{1}$ connect the A Port to the selected B Port output. When the OE Pin is HIGH, the switch is OPEN and a HIGH-Impedance state exists between the two ports.

## Features

■ Wide bandwidth: 300 MHz
■-73 dB non adjacent channel crosstalk at 10 MHz
■-56 dB Off Isolation at 10 MHz
■ $3 \Omega$ typical On Resistance ( $\mathrm{R}_{\mathrm{ON}}$ )
■ Low power consumption (3uA maximum)
■ Control input: TTL compatible

## Applications

■ Y/C video or CVBS video switch in LCD, plasma, and projector displays
